Anglo Swiss Resources Announces Private Placement

VANCOUVER, BRITISH COLUMBIA, July 13, 2007 -- Anglo Swiss Resources Inc. (TSX VENTURE: ASW) (OTCBB: ASWRF) (BERLIN: AMO) announces it has entered into financing agreements to complete a private placement for proceeds of \$1,000,000 through the issuance of 7,500,000 flow through units and 2,500,000 non-flow through units, both at 10 cents per unit, subject to regulatory approval.

Each FT unit will consist of one common share (the FT Shares) and a one-half flow through warrant; each whole warrant is exercisable to purchase an additional FT Share at a price of 20 cents for one year from the closing date.

Each NFT unit will consist of one common share (the NFT Shares) and a one-half warrant, each whole warrant is exercisable to purchase an additional NFT share at a price of 15 cents for six months from closing or at a price of 30 cents for 18 months from the closing date.

The proceeds of the private placement will be used for continued exploration on the Company's Canadian exploration properties that qualify for Canadian Exploration Expenses (CEE) and for general working capital.

For further information, investors are asked to visit the Anglo Swiss Resources Investor Relations Hub at www.agoracom.com/IR/AngloSwiss or email to ASW@agoracom.com.

About Anglo Swiss Resources, Inc.

Anglo Swiss Resources is a Canadian mining company engaged in the acquisition and exploration of mineral properties. Its exploration properties include: four distinct claim groups located in the Lac de Gras region of the NWT (diamonds), and in south-eastern British Columbia the historic Kenville Gold Mine (copper, gold, silver and molybdenum), the Blu Starr Gemstone Property (sapphire, iolite, garnet and graphite) and the McAllister Pipe Property (lamproitic diatreme - diamonds).

Anglo Swiss Resources Details Geophysical and Diamond Drilling Program Kenville Mine Property.

VANCOUVER, BRITISH COLUMBIA, July 16, 2007 -- Anglo Swiss Resources Inc. (TSX VENTURE: ASW) (OTCBB: ASWRF) (BERLIN: AMO) is pleased to announce a proposed geophysical and diamond drilling program on its Kenville Mine property, located 10 kilometres west of Nelson, B.C.

The 2007 exploration program is designed to test a strong geochemical anomaly on the west side of Eagle Creek, previously explored by Teck Exploration Ltd (Teckcominco) in 1995 and 1996. The present exploration program will test mineral zones along an indicated 1 kilometre long zone, containing strongly anomalous values in gold, silver, copper and molybdenum.

Some highlights of the Teck drilling program included:

1.03% copper, 8.18 g/t silver, 439 ppm Mo across 8.7 metres in drill hole TK-95-03

82.15 g/t gold, 34.1 g/t silver across 0.25 metres in drill hole TK-95-05

2289 ppm copper and 365 ppb gold across 7.6 metres in drill hole TK96-05

Generally strong alteration is present throughout the majority of the Teck drill holes with locally strong concentrations of gold, copper, silver and molybdenum. The company believes that the past drilling, geochemical and geophysical programs are indicative of a potential porphyry system of significant extent and grade. The mineral system was only partially evaluated by past drilling programs, with the strongest part of the anomalous zone yet to be evaluated.

Exploration of the Kenville property will consist of geophysical surveys over the presently established geochemical grid and will consist of magnetometer and VLF-EM surveys on 100 metre line spacings throughout the 1 kilometre extent of the geochemically indicated mineral zone. Results of the geophysical work, in combination with past geochemical surveys will be used to design a diamond drilling program to test the mineral zone throughout its indicated extent. At present, it is proposed that at least 7 drill holes will be carried out along the strike of the anomalous zone, totaling approximately 1500 metres of drilling.

The preceding excerpts from the 1995 and 1996 Teck reports on the work programs on the Kenville property predate the NI 43-101 standards and are historical in nature. The Teck program consisted of 12 drill holes totaling 2,427 metres with a large percentage of the drill core assayed. The assays were numerous and ranged from no significant values up to what was considered even at that time to be of significant values.

For further information, investors are asked to visit the Anglo Swiss Resources Investor Relations Hub at www.agoracom.com/IR/AngloSwiss or email to ASW@agoracom.com.
