## The Markets in Review

Dear Shareholder,

In the 12 months ended April 30, 2017, risk assets, such as stocks and high-yield bonds, delivered strong performance. These markets showed great resilience during a period with big surprises, including the United Kingdom s vote to leave the European Union and the outcome of the U.S. presidential election, which brought only brief spikes in equity market volatility. However, high-quality assets with more interest rate sensitivity struggled. U.S. Treasuries posted negative returns as rising energy prices, modest wage increases and steady job growth led to expectations of higher inflation and anticipation of interest rate increases by the U.S. Federal Reserve (the Fed ).

The global reflationary theme rising nominal growth, wages and inflation was the dominant driver of asset returns during the period, outweighing significant political upheavals and uncertainty. Reflationary expectations accelerated after the U.S. election and continued into the beginning of 2017, stoked by expectations that the new presidential administration s policies would provide an extra boost to U.S. growth. More recently, however, growing skepticism about the likelihood of significant near-term U.S. tax reform and infrastructure spending has tempered enthusiasm around the reflation trade. Nonetheless, markets have remained generally positive thus far in 2017 and continue to exhibit low levels of volatility by historical standards. Although political uncertainty persisted, benign credit conditions and expectations for economic growth have kept markets fairly tranquil. The period ended with a global risk asset rally following centrist Emmanuel Macron s win in the first round of the French presidential election and better-than-expected U.S. and European corporate earnings.

Although economic momentum is gaining traction, the capacity for rapid global growth is restrained by structural factors, including an aging population, low productivity growth and excess savings, as well as cyclical factors, like the Fed moving toward the normalization of monetary policy and the length of the current expansion. Tempered economic growth and high valuations across most assets have set the stage for muted returns going forward.

Equity markets still present opportunities, although the disparity between winners and losers is widening a dynamic that increases both the risk and return potential of active investing. Fixed income investors are also facing challenges as many sectors are exhibiting higher valuations while rates remain at historically low levels.

In this environment, investors need to think globally, extend their scope across a broad array of asset classes, and be nimble as market conditions change. We encourage you to talk with your financial advisor and visit blackrock.com for further insight about investing in today s markets.

Sincerely,

Rob Kapito

### Trust Summary as of April 30, 2017

#### BlackRock Credit Allocation Income Trust

#### **Trust Overview**

T------

BlackRock Credit Allocation Income Trust s (BTZ) (the Trust ) investment objective is to provide current income, current gains and capital appreciation. The Trust seeks to achieve its investment objective by investing, under normal market conditions, at least 80% of its assets in credit-related securities, including, but not limited to, investment grade corporate bonds, high yield bonds (commonly referred to as junk bonds), bank loans, preferred securities or convertible bonds or derivatives with economic characteristics similar to these credit-related securities. The Trust may invest directly in such securities or synthetically through the use of derivatives.

No assurance can be given that the Trust s investment objective will be achieved.

Trust Information	
Symbol on New York Stock Exchange ( NYSE )	BTZ
Initial Offering Date	December 27, 2006
Current Distribution Rate on Closing Market Price as of April 30, 2017 (\$13.41) <sup>1</sup>	6.31%
Current Monthly Distribution per Common Share <sup>2</sup>	\$0.0705
Current Annualized Distribution per Common Share <sup>2</sup>	\$0.8460
Economic Leverage as of April 30, 2017 <sup>3</sup>	22%

<sup>1</sup> Current distribution rate on closing market price is calculated by dividing the current annualized distribution per share by the closing market price. The current distribution rate consists of income, net realized gains and/or a return of capital. Past performance does not guarantee future results.

- <sup>2</sup> The distribution rate is not constant and is subject to change. A portion of the distribution may be deemed a return of capital or net realized gain.
- <sup>3</sup> Represents reverse repurchase agreements as a percentage of total managed assets, which is the total assets of the Trust (including any assets attributable to any borrowings) minus the sum of its liabilities (other than borrowings representing financial leverage). For a discussion of leveraging techniques utilized by the Trust, please see The Benefits and Risks of Leveraging on page 10.

#### Performance and Portfolio Management Commentary

Returns for the six months ended April 30, 2017 were as follows:

	<b>Returns Based On</b>		
	Market Price	NAV	
BTZ <sup>1,2</sup>	7.64%	3.59%	
Lipper Corporate BBB-Rated Debt Funds (Leveraged) <sup>3</sup>	2.84%	1.90%	

<sup>1</sup> All returns reflect reinvestment of dividends and/or distributions at actual reinvestment prices.

- <sup>2</sup> The Trust s discount to NAV narrowed during the period, which accounts for the difference between performance based on price and performance based on NAV.
- <sup>3</sup> Average return. Returns reflect reinvestment of dividends and/or distributions at NAV on the ex-dividend date as calculated by Lipper.

Performance results may include adjustments made for financial reporting purposes in accordance with U.S. generally accepted accounting principles. The following discussion relates to the Trust s absolute performance based on NAV:

#### What factors influenced performance?

The largest detractors from performance included the Trust s positions in the tobacco, food & beverage, wireline and retail industries.

Positive contributors to performance during the period included the Trust s exposure to capital securities (dividend-paying securities that combine some features of both corporate bonds and preferred stocks, while generally providing higher yields to compensate for being less senior in the issuer s capital structure). In terms of industries, holdings within midstream energy, utilities and U.S. banks added to performance. Exposure

to high yield bonds also contributed positively to performance on an absolute basis. Finally, positioning with respect to duration (and corresponding interest rate sensitivity) and yield curve positioning helped generate positive performance as well. **Describe recent portfolio activity.** 

The Trust tactically shortened its duration in preparation for rates moving higher as a result of the reflationary environment and anticipated pro-growth policy initiatives. The Trust kept its preference for high quality assets given the lack of value in the overall market and somewhat elevated geopolitical risks, while tactically adding shorter-maturity high yield names. At the same time, the Trust was positioned to benefit from the extended credit cycle and investment grade corporate bonds as they continue to be supported by the reflation theme. **Describe portfolio positioning at period end.** 

The Trust ended the period defensively positioned despite a constructive fundamental backdrop for credit, as the investment adviser views geopolitical risks as elevated and many of the supportive factors as already reflected in tightened spreads and active investor allocations to credit. The Trust continued its positive view on pipelines and cable/telecommunications, while maintaining a more defensive stance with respect to industrials. Within high quality industrials, the Trust favored short-maturity credits given the lack of value in the current market. With respect to financials, the Trust favored longer maturities within senior credits and short-end issues within subordinate issues.

The views expressed reflect the opinions of BlackRock as of the date of this report and are subject to change based on changes in market, economic or other conditions. These views are not intended to be a forecast of future events and are no guarantee of future results.

### Trust Summary as of April 30, 2017

#### BlackRock Floating Rate Income Trust

#### **Trust Overview**

BlackRock Floating Rate Income Trust s (BGT) (the Trust ) primary investment objective is to provide a high level of current income. The Trust s secondary investment objective is to seek the preservation of capital to the extent consistent with its primary objective of high current income. The Trust seeks to achieve its investment objectives by investing primarily, under normal conditions, at least 80% of its assets in floating and variable rate instruments of U.S. and non-U.S. issuers, including a substantial portion of its assets in global floating and variable rate securities including senior secured floating rate loans made to corporate and other business entities. Under normal market conditions, the Trust expects that the average effective duration of its portfolio will be no more than 1.5 years. The Trust may invest directly in such securities or synthetically through the use of derivatives.

No assurance can be given that the Trust s investment objectives will be achieved.

#### Performance and Portfolio Management Commentary

Returns for the six months ended April 30, 2017 were as follows:

	Returns Base	<b>Returns Based On</b>		
	Market Price	NAV		
BGT <sup>1,2</sup>	11.29%	3.59%		
Lipper Loan Participation Funds <sup>3</sup>	10.09%	4.13%		

<sup>1</sup> All returns reflect reinvestment of dividends and/or distributions at actual reinvestment prices.

<sup>2</sup> The Trust moved from a discount to NAV to a premium, which accounts for the difference between performance based on price and performance based on NAV.

<sup>3</sup> Average return. Returns reflect reinvestment of dividends and/or distributions at NAV on the ex-dividend date as calculated by Lipper.

Performance results may include adjustments made for financial reporting purposes in accordance with U.S. generally accepted accounting principles. The following discussion relates to the Trust s absolute performance based on NAV:

#### What factors influence performance?

The Trust s exposure to retailers was the principal detractor from performance, as secular changes in consumer spending behavior, shifting fashion trends, excess capacity, and potential fiscal reform all weighed on the segment.

The broad floating rate loan interest ( bank loan ) market provided a positive return for the six-month period. Among the most notable drivers of positive returns in the Trust were allocations to the technology and health care sectors. The Trust s tactical high yield bond allocation also benefited performance, as high yield bonds outperformed bank loans over the six-month period. **Describe recent portfolio activity.** 

Throughout the six-month period, the Trust maintained its focus on the higher quality segments of the loan market in terms of loan structure, liquidity and overall credit quality. The Trust concentrated its investments in strong companies with stable cash flows and high quality collateral, with the ability to meet interest obligations and ultimately return principal. This high-quality bias constrained recent performance given the outperformance by the riskier areas of the market. To capture additional momentum and benefit from a more constructive narrative surrounding commodity-related assets, the Trust selectively added to its fixed-rate high yield bond allocation early in the period, which contributed to results given that market s outperformance versus loans. This position was reduced as the period progressed amid tighter risk premiums in the high yield market and volatility in oil prices. From a sector standpoint, the Trust added to risk within the technology and health care sectors, while reducing exposure to names in the electric and transportation services sectors.

Describe portfolio positioning at period end.

At period end, the Trust held 92% of its total portfolio in bank loans, with the remainder primarily in corporate bonds and collateralized loan obligations. Across the credit spectrum, the Trust held most of its assets in single B-rated credits, followed by BB-rated loan names. The Trust maintained minimal exposure to CCC and below rated loan credits, and avoided what it perceives to be the riskier segments of that universe (i.e. offshore drillers, retailers, and media). Top issuer positions included Level 3 (wirelines), Altice/Numericable (cable & satellite), and First Data (technology). The Trust continued its strategy to maintain a modest stake in more conservative high yield bonds.

The views expressed reflect the opinions of BlackRock as of the date of this report and are subject to change based on changes in market, economic or other conditions. These views are not intended to be a forecast of future events and are no guarantee of future results.

#### Performance and Portfolio Management Commentary

Returns for the six months ended April 30, 2017 were as follows:

	Returns Based	On
	Market Price	NAV
BIT <sup>1,2</sup>	14.18%	7.96%
Lipper General Bond Funds <sup>3</sup>	9.59%	6.85%

<sup>1</sup> All returns reflect reinvestment of dividends and/or distributions at actual reinvestment prices.

- <sup>2</sup> The Trust s discount to NAV narrowed during the period, which accounts for the difference between performance based on price and performance based on NAV.
- <sup>3</sup> Average return. Returns reflect reinvestment of dividends and/or distributions at NAV on the ex-dividend date as calculated by Lipper.

Performance results may include adjustments made for financial reporting purposes in accordance with U.S. generally accepted accounting principles. The following discussion relates to the Trust s absolute performance based on NAV:

#### What factors influenced performance?

The Trust s positions in high yield corporate bonds, residential mortgage-backed securities (MBS), commercial mortgage backed securities (CMBS), investment grade corporates and senior loans were the largest contributors to performance. The Trust s allocations to asset-backed securities (ABS) as well as foreign government and agency obligations also supported absolute returns.

The Trust s duration (sensitivity to interest rate movements) and yield curve positioning detracted from performance during the period.

#### Describe recent portfolio activity.

The investment adviser believes that the failure to pass health care reform has marginally dampened investors confidence in the ability of the Trump administration to move forward with its pro-growth agenda. Consequently, the Trust s spread duration (sensitivity to credit spreads) was decreased as spread sector exposure was rotated out of corporate bonds and into sovereign plus and non-agency MBS. The Trust largely maintained its duration exposure over the period. From a sub-sector perspective, corporate spreads have been approaching their lowest levels of the cycle and appear to be overvalued relative to MBS. The Trust reduced its exposure to investment grade financials and rotated into non-agency collateralized mortgage obligations to take advantage of this imbalance. The investment adviser also believed that sovereign plus names appeared relatively attractive versus other fixed income spread sectors and increased the Trust s exposure to lower quality sovereign issues.

Describe portfolio positioning at period end.

At period end, the Trust maintained a diversified exposure to non-government spread sectors, including non-agency MBS, high yield corporates, capital securities, ABS, collateralized loan obligations, CMBS and senior loans. The Trust also held marginal exposure to foreign government and agency obligations.

The views expressed reflect the opinions of BlackRock as of the date of this report and are subject to change based on changes in market, economic or other conditions. These views are not intended to be a forecast of future events and are no guarantee of future results.

## The Benefits and Risks of Leveraging

The Trusts may utilize leverage to seek to enhance the distribution rate on, and net asset value ( NAV ) of, their common shares ( Common Shares ). However, these objectives cannot be achieved in all interest rate environments.

In general, the concept of leveraging is based on the premise that the financing cost of leverage, which is based on short-term interest rates, is normally lower than the income earned by a Trust on its longer-term portfolio investments purchased with the proceeds from leverage. To the extent that the total assets of the Trusts (including the assets obtained from leverage) are invested in higher-yielding portfolio investments, the Trusts shareholders benefit from the incremental net income. The interest earned on securities purchased with the proceeds from leverage is paid to shareholders in the form of dividends, and the value of these portfolio holdings is reflected in the per share NAV.

To illustrate these concepts, assume a Trust s capitalization is \$100 million and it utilizes leverage for an additional \$30 million, creating a total value of \$130 million available for investment in longer-term income securities. If prevailing short-term interest rates are 3% and longer-term interest rates are 6%, the yield curve has a strongly positive slope. In this case, a Trust s financing costs on the \$30 million of proceeds obtained from leverage are based on the lower short-term interest rates. At the same time, the securities purchased by a Trust with the proceeds from leverage earn income based on longer-term interest rates. In this case, a Trust s financing cost of leverage is significantly lower than the income earned on a Trust s longer-term investments acquired from such leverage proceeds, and therefore the holders of Common Shares (Common Shareholders) are the beneficiaries of the incremental net income.

However, in order to benefit shareholders, the return on assets purchased with leverage proceeds must exceed the ongoing costs associated with the leverage. If interest and other costs of leverage exceed the Trusts return on assets purchased with leverage proceeds, income to shareholders is lower than if the Trusts had not used leverage. Furthermore, the value of the Trusts portfolio investments generally varies inversely with the direction of long-term interest rates, although other factors can influence the value of portfolio investments. In contrast, the value of the Trusts obligations under their respective leverage arrangements generally does not fluctuate in relation to interest rates. As a result, changes in interest

rates can influence the Trusts NAVs positively or negatively. Changes in the future direction of interest rates are very difficult to predict accurately, and there is no assurance that the Trusts intended leveraging strategy will be successful.

The use of leverage also generally causes greater changes in each Trust s NAV, market price and dividend rates than comparable portfolios without leverage. In a declining market, leverage is likely to cause a greater decline in the NAV and market price of a Trust s shares than if the Trust were not leveraged. In addition, each Trust may be required to sell portfolio securities at inopportune times or at distressed values in order to comply with regulatory requirements applicable to the use of leverage or as required by the terms of leverage instruments, which may cause the Trusts to incur losses. The use of leverage may limit a Trust s ability to invest in certain types of securities or use certain types of hedging strategies. Each Trust incurs expenses in connection with the use of leverage, all of which are borne by shareholders and may reduce income to the shareholders. Moreover, to the extent the calculation of the Trusts investment advisory fees includes assets purchased with the proceeds of leverage, the investment advisory fees payable to the Trusts investment adviser will be higher than if the Trusts did not use leverage.

Each Trust may utilize leverage through a credit facility or reverse repurchase agreements as described in the Notes to Financial Statements.

Under the Investment Company Act of 1940, as amended (the 1940 Act ), each Trust is permitted to issue debt up to  $\frac{33}{3}\%$  of its total managed assets. BIT is permitted to use economic leverage (which includes leverage attributable to reverse repurchase agreements) of up to 50% of its total managed assets. A Trust may voluntarily elect to limit its leverage to less than the maximum amount permitted under the 1940 Act. In addition, a Trust may also be subject to certain asset coverage, leverage or portfolio composition requirements imposed by its credit facility, which may be more stringent than those imposed by the 1940 Act.

If a Trust segregates or designates on its books and records cash or liquid assets having a value not less than the value of a Trust s obligations under the reverse repurchase agreement (including accrued interest), then such transaction is not considered a senior security and is not subject to the foregoing limitations and requirements under the 1940 Act.

## Derivative Financial Instruments

The Trusts may invest in various derivative financial instruments. These instruments are used to obtain exposure to a security, commodity, index, market and/or other asset without owning or taking physical custody of securities, commodities and/or other referenced assets or to manage market, equity, credit, interest rate, foreign currency exchange rate, commodity and/or other risks. Derivative financial instruments may give rise to a form of economic leverage and involve risks, including the imperfect correlation between the value of a derivative financial instrument and the underlying asset, possible default of the counterparty to the

transaction or illiquidity of the instrument. BIT may use economic leverage up to 100% of its net assets (50% of its total managed assets). The Trusts successful use of a derivative financial instrument depends on the investment adviser s ability to predict pertinent market movements accurately, which cannot be assured. The use of these instruments may result in losses greater than if they had not been used, may limit the amount of appreciation a Trust can realize on an investment and/or may result in lower distributions paid to shareholders. The Trusts investments in these instruments, if any, are discussed in detail in the Notes to Financial Statements.
