Sercel Extends Capability of 508^{XT} Seismic Acquisition System to Transition Zones

Paris, France June 12, 2018

CGG announced today that Sercel has launched a transition zone version of its state-of-the-art 508^{XT} seismic acquisition system. Seismic crews will now be able to deploy the 508^{XT} solution in marsh zones and water depths of up to 25 m.

Designed with reinforced hardware to withstand the complex challenges of operating in shallow water environments, the new 508^{XT} transition zone system also benefits from Sercel's unique fault-tolerant X-Tech cross-technology architecture, featuring local storage and automatic rerouting to maximize survey productivity. With its 100% real-time monitoring capability it also brings users peace of mind that operations are running smoothly.

Pascal Rouiller, Sercel CEO, said: By adapting our 508^{XT} technology for transition zone environments, Sercel has made another step forward in our strategy to meet customer needs for a single seismic acquisition system that can operate in any terrain and any configuration. The 508^{XT} is undoubtedly the most efficient and powerful seismic acquisition technology available today that can offer crews the guarantee of recording the highest-quality seismic data, regardless of terrain conditions.
