Letter from the chairman
Dear Shareholder,
Economic growth in the U.S. was mixed during the 12-month reporting period ended September 30, 2008. Looking back, third quarter 2007 U.S. gross domestic product (GDP) is growth was a strong 4.8%. However, continued weakness in the housing market, an ongoing credit crunch and soaring oil and food prices then took their toll on the economy, as fourth quarter 2007 GDP declined
0.2%. The economy then expanded 0.9% and 2.8% during the first and second quarters of 2008, respectively. This rebound was due, in part, to rising exports that were buoyed by a weakening U.S. dollar, and solid consumer spending, which was aided by the government s tax rebate program. The dollar s rally and the end of the rebate program,
combined with other strains on the economy, then caused GDP to take a step backward in the third quarter. According

Consensus expectations now point to the U.S. falling into a recession later this year or in early 2009. Consumer spending, which represents approximately two-thirds of GDP, is moderating, as evidenced by the three consecutive months of declining retail sales during the third quarter of 2008. According to the Department of Commerce, September s 1.2% fall in retail sales was the sharpest decline in three years. In terms of the job market, the U.S. Department of Labor reported that payroll employment declined in each of the first nine months of 2008. Year-to-date through September, roughly 760,000 jobs have been shed and the unemployment rate now stands at 6.1%, its highest level in five years.

to the advance estimate released by the U.S. Department of Commerce, third quarter 2008 GDP declined 0.3%.

Ongoing issues related to the housing and subprime mortgage markets and seizing credit markets prompted the Federal Reserve Board (Fed) ii to take aggressive and, in some cases, unprecedented actions. Beginning in September 2007, the Fed reduced the federal funds rateiii from 5.25% to 4.75%. This marked the first such reduction since June 2003. The Fed then reduced the federal funds rate on six additional occasions through April 2008, bringing the federal funds rate to 2.00%. The Fed then shifted gears in the face of mounting inflationary prices and a weakening U.S. dollar. At its meetings in June, August and September, the Fed held rates steady. Then, on October 8, 2008 (after the reporting period ended), in a global coordination effort with six central banks around the world, interest rates were cut in an attempt to reduce the

strains in the global financial

Western Asset High Income Opportunity Fund Inc. I

#### Letter from the chairman continued

markets. At that time, the Fed lowered the federal funds rate from 2.00% to 1.50%. The Fed again cut rates from 1.50% to 1.00% at its regularly scheduled meeting on October 29, 2008. In conjunction with its October meeting, the Fed stated: The pace of economic activity appears to have slowed markedly, owing importantly to a decline in consumer expenditures. ... Moreover, the intensification of financial market turmoil is likely to exert additional restraint on spending, partly by further reducing the ability of households and businesses to obtain credit.

In addition to the interest rate cuts, the Fed took several actions to improve liquidity in the credit markets. In March 2008, the Fed established a new lending program allowing certain brokerage firms, known as primary dealers, to also borrow from its discount window. Also in March, the Fed played a major role in facilitating the purchase of Bear Stearns by JPMorgan Chase. In mid-September 2008, it announced an \$85 billion rescue plan for ailing AIG and pumped \$70 billion into the financial system as Lehman Brothers bankruptcy and mounting troubles at other financial firms roiled the markets.

The U.S. Department of the Treasury has also taken an active role in attempting to stabilize the financial system, as it orchestrated the government s takeover of mortgage giants Fannie Mae and Freddie Mac in September. In addition, the Treasury proposed a \$700 billion rescue plan to help financial institutions reduce their exposure to troubled mortgage-related securities. After the House of Representatives initially rejected the plan on September 29, 2008, a revamped version was approved by Congress and, on October 3, 2008, signed into law by President Bush. Also in October, the government announced a plan to purchase stakes in the nation s largest banks and guarantee certain bank debts. Also, the Federal Deposit Insurance Corporation (FDIC) temporarily increased its insurance on bank accounts from \$100,000 to \$250,000.

During the 12-month reporting period ended September 30, 2008, both short- and long-term Treasury yields experienced periods of extreme volatility. Investors were initially focused on the subprime segment of the mortgage-backed market. These concerns broadened, however, to include a wide range of financial institutions and markets. As a result, other fixed-income instruments also experienced increased price volatility. This unrest triggered several flights to quality, causing Treasury yields to move lower (and their prices higher), while riskier segments of the market saw their yields move higher (and their prices lower). This was particularly true toward the end of the reporting period, as the turmoil in the financial markets and sharply falling stock prices caused investors to flee securities that were perceived to be risky, including high-quality corporate bonds and high grade municipal bonds. At one point in September, the yield available from the three-month Treasury bill fell to 0.04%, as investors were essentially willing to forgo any return potential in order to access the safety of government-backed securities. During the 12 months ended September 30, 2008, two-year Treasury yields fell from 3.97% to 2.00%. Over the same time frame, 10-year Treasury yields moved from 4.59% to 3.85%. Looking at

II Western Asset High Income Opportunity Fund Inc.

the 12-month period as a whole, the overall bond market, as measured by the Barclays Capital U.S. Aggregate Indexiv, returned 3.65%.

Periods of increased investor risk aversion caused the high-yield bond market to produce poor results over the 12 months ended September 30, 2008. While the asset class rallied on several occasions, it was not enough to overcome numerous flights to quality. In particular, seizing credit markets, coupled with fears of a global recession and rising corporate bond default rates, sent high-yield bond prices sharply lower in September 2008. During the month of September, the Citigroup High Yield Market Index (the Index ) returned -8.01%. Over the 12 months ended September 30, 2008, the Index returned -11.66%.

Despite periods of extreme market volatility and increased investor risk aversion, emerging market debt prices held up fairly well during most of the reporting period. In general, the asset class was supported by solid demand, superior growth rates in emerging market countries, increased domestic spending and rating upgrades in countries such as Brazil. However, fears of a global recession, falling commodity prices and seizing credit markets sent emerging market debt prices sharply lower in September. During the month of September, the JPMorgan Emerging Markets Bond Index Global (EMBI Global) vi returned -6.84%. Over the 12 months ended September 30, 2008, the EMBI Global returned -2.72%.

#### A special note regarding increased market volatility

In recent months, we have experienced a series of events that have impacted the financial markets and created concerns among both novice and seasoned investors alike. In particular, we have witnessed the failure and consolidation of several storied financial institutions, periods of heightened market volatility, and aggressive actions by the U.S. federal government to steady the financial markets and restore investor confidence. While we hope that the worst is over in terms of the issues surrounding the credit and housing crises, it is likely that the fallout will continue to impact the financial markets and the U.S. economy during the remainder of the year and, perhaps, into 2009 as well.

Like all asset management firms, Legg Mason has not been immune to these difficult and, in some ways, unprecedented times. However, today s challenges have only strengthened our resolve to do everything we can to help you reach your financial goals. Now, as always, we remain committed to providing you with excellent service and a full spectrum of investment choices. And rest assured, we will continue to work hard to ensure that our investment managers make every effort to deliver strong long-term results.

We also remain committed to supplementing the support you receive from your financial advisor. One way we accomplish this is through our enhanced website, www.leggmason.com/cef. Here you can gain immediate access to many special features to help guide you through difficult times, including:

• Fund prices and performance,

Western Asset High Income Opportunity Fund Inc.

F	und	overview

# Q. What is the Fund s investment strategy?

A. The Fund s primary investment objective is to seek high current income. Capital appreciation is a secondary objective. In seeking to fulfill its investment objectives, the Fund invests, under normal market conditions, at least 80% of its net assets in high-yield securities and up to 20% in common stock equivalents, including options, warrants and rights.

We employ an actively managed approach that is risk-aware and incorporates top-down macroeconomic views with industry sector insights and bottom-up credit research to derive the general framework for the Fund s predominantly non-investment grade credit mandate. This framework provides the foundation for how the portfolio is positioned with respect to risk (aggressive, neutral, conservative), as well as sector overweights and underweights.

Risk and weightings are reviewed on a regular basis. Our bottom-up process provides the basis for populating the targeted industry weightings through individual credit selection. Analysts work closely with portfolio managers to determine which securities provide the best risk/reward relationship within their respective sectors. The research team focuses on key fundamental measures such as leverage, cash flow adequacy, liquidity, amortization schedule, underlying asset value and management integrity/track record.

Western Asset Management Company (Western Asset), the Funds subadviser, utilizes a fixed-income team approach, with decisions derived from interaction among various investment management sector specialists. The sector teams are comprised of Western Asset s senior portfolio managers, research analysts and an in-house economist. Under this team approach, management of client fixed-income portfolios will reflect a consensus of interdisciplinary views within the Western Asset organization.

#### Q. What were the overall market conditions during the Fund s reporting period?

A. During the fiscal year, the U.S. bond market experienced periods of increased volatility. Changing perceptions regarding the economy, inflation and future Federal Reserve Board (Fed ) monetary policy caused bond prices to fluctuate. Two- and 10-year Treasury yields began the reporting period at 3.97% and 4.59%, respectively. Treasury yields initially moved higher and their prices moved lower as surging oil and food prices triggered inflationary pressures and economic growth was better than expected. Toward the end of 2007, yields drifted lower and continued to decline through the first quarter of 2008, as concerns regarding the subprime mortgage market and a severe credit crunch caused a flight to

#### Fund overview continued

quality. During this period, investors were drawn to the relative safety of Treasuries, while increased risk aversion caused other segments of the bond market, including high-yield bonds, to falter.

Treasury yields then moved higher in April, May and early June, as inflationary pressures increased. During this period, riskier fixed-income asset classes, such as high-yield bonds and emerging market debt rallied. However, the credit crunch resumed in mid-June, resulting in another flight to quality. This caused Treasury yields to move lower during much of the remainder of the reporting period. At the end of the fiscal year, two- and 10-year Treasury yields were 2.00% and 3.85%, respectively.

While the Fed attempted to stimulate growth by cutting the federal funds rate from 5.25% to 2.00% from September 2007 through April 2008, it held rates steady during the remainder of the fiscal year. However, in early October, after the reporting period ended, the Fed lowered rates from 2.00% to 1.50%, citing weakening of economic activity and a reduction in inflationary pressures. The Fed further reduced the federal funds rate from 1.50% to 1.00% on October 29, 2008.

Turning to the high-yield bond market, it too experienced periods of increased volatility. This was particularly true at the end of the reporting period, as fears of a global recession triggered expectations for sharply higher default rates. As a result, high-yield spreads widened significantly as their prices fell sharply. Overall, during the 12 months ended September 30, 2008, the Citigroup High Yield Market Indexiii returned -11.66%.

#### Q. How did we respond to these changing market conditions?

A. As always, we followed our disciplined, value-oriented investment approach to managing the Fund s portfolio. We believe that the ability to integrate fundamental credit research with rigorous relative value analysis drives performance in our portfolios. This is the basis of each investment and does not change regardless of market conditions. While the high-yield market suffered from significant technical dislocations that negatively impacted valuations, in our view, this created significant opportunities for long-term investors.

#### Performance review

For the 12 months ended September 30, 2008, Western Asset High Income Opportunity Fund Inc. returned -12.32% based on its net asset value ( NAV )iv and -26.04% based on its New York Stock Exchange ( NYSE ) market price per share. The Fund s unmanaged benchmark, the Barclays Capital U.S. Corporate High Yield 2% Issuer Cap Indexv, returned -10.51% for the same period. The Lipper High Current Yield Closed-End Funds Category Averagevi returned -18.95% over the same time frame. Please note that Lipper performance returns are based on each fund s NAV.

During the 12-month period, the Fund made distributions to shareholders totaling \$0.57 per share. The performance table shows the Fund s 12-month total return based on its NAV and market price as of September 30, 2008.

Past performance is no guarantee of future results.

PERFORMANCE SNAPSHOT as of September 30, 2008 (unaudited)

PRICE PER SHARE \$5.59 (NAV) \$4.34 (Market Price) 12-MONTH TOTAL RETURN\* -12.32 % -26.04 %

All figures represent past performance and are not a guarantee of future results.

\* Total returns are based on changes in NAV or market price, respectively. Total returns assume the reinvestment of all distributions in additional shares in accordance with the Fund s Dividend Reinvestment Plan.

#### Q. What were the leading contributors to performance?

A. The Fund s issue selection contributed to performance during the reporting period. For example, eight of its largest ten overweight positions outperformed the Fund s benchmark. Sub-sector and sector allocation also aided relative performance, including underweights to Media Non-Cable and Consumer Cyclicals1, which returned -21.05% and -17.77%, respectively, for the 12 months ended September 30, 2008. In addition, the Fund s relative performance benefited from its overweights to Capital Goods2, which returned -4.93%, and Utilities, which returned -2.61%. Our decision to hold a portion of the portfolio in cash was also beneficial to results during the 12-month reporting period.

#### Q. What were the leading detractors from performance?

A. Relative to its benchmark, the Fund s overweight to CCC and below rated issues detracted from performance as these lower-rated securities returned -18.16% for the reporting period. The Fund s relative performance was also hurt by an overweight to Media Cable, which returned -10.13%, as well as overweights to select Financials that performed particularly poorly. These included the Fund s holdings in **Residential Capital LLC**, **AIG** and **Fannie Mae** preferred securities.

<sup>&</sup>lt;sup>1</sup>Consumer Cyclicals consists of the following industries: Automotive, Entertainment, Gaming, Home Construction, Lodging, Retailers, Restaurants, Textiles and other consumer services.

<sup>2</sup>Capital Goods consists of the following industries: Aerospace & Defense, Building Materials, Diversified Manufacturing, Construction Machines, Packaging and Environmental.

4 Western Asset High Income Opportunity Fund Inc. 2008 Annual Report

The information provided is not intended to be a forecast of future events, a guarantee of future results or investment advice. Views expressed may differ from those of the firm as a whole.

Portfolio holdings and breakdowns are as of September 30, 2008 and are subject to change and may not be representative of the portfolio manager s current or future investments. The Fund s top 10 holdings (as a percentage of net assets) as of this date were: Energy Future Holdings, (3.2%), Ford Motor Credit Co., Senior Notes, 12.000% due 5/15/15 (1.4%), CCH I LLC/CCH I Capital Corp. (1.3%), Hertz Corp. (1.2%), Sprint Capital Corp., Notes, 8.750% due 3/15/32 (1.0%), El Paso Corp., Medium-Term Notes, 7.750% due 1/15/32 (1.0%), Ocwen Capital Trust I (1.0%), SandRidge Energy Inc. (1.0%), DynCorp International LLC/DIV Capital Corp., Senior Subordinated Notes, 9.500% due 2/15/13 (1.0%) and Intelsat Corp. (1.0%). Please refer to pages 7 through 23 for a list and percentage breakdown of the Fund s holdings.

The mention of sector breakdowns is for informational purposes only and should not be construed as a recommendation to purchase or sell any securities. The information provided regarding such sectors is not a sufficient basis upon which to make an investment decision. Investors seeking financial advice regarding the appropriateness of investing in any securities or investment strategies discussed should consult their financial professional. The Fund s top five sector holdings (as a percentage of net assets), as of September 30, 2008 were: Consumer Discretionary (17.9%), Industrials (14.2%), Energy (13.7%), Financials (10.2%) and Telecommunication Services (9.2%). The Fund s portfolio composition is subject to change at any time.

RISKS: The Fund invests in high-yield debt securities, which are subject to greater risks than investments in higher-rated bonds, such as the increased risk of default and greater volatility because of the lower credit quality of the issues. Fixed-income investments are subject to interest rate risk. As interest rates rise, bond prices fall, reducing the value of the Fund s holdings. The Fund may use derivatives, such as options and futures, which can be illiquid, may disproportionately increase losses, and have a potentially large impact on Fund performance. In addition, the Fund may invest in foreign securities, which are subject to certain risks of overseas investing, including currency fluctuations and changes in political and economic conditions, which could result in significant fluctuations. These risks are magnified in emerging markets.

All index performance reflects no deduction for fees, expenses or taxes. Please note that an investor cannot invest directly in an index.

- i The Federal Reserve Board (Fed) is responsible for the formulation of policies designed to promote economic growth, full employment, stable prices, and a sustainable pattern of international trade and payments.
- ii The federal funds rate is the rate charged by one depository institution on an overnight sale of immediately available funds (balances at the Federal Reserve) to another depository institution; the rate may vary from depository institution to depository institution and from day to day.
- iii The Citigroup High Yield Market Index is a broad-based unmanaged index of high-yield securities.
- iv Net asset value (NAV) is calculated by subtracting total liabilities from the closing value of all securities held by the Fund (plus all other assets) and dividing the result (total net assets) by the total number of the common shares outstanding. The NAV fluctuates with changes in the market prices of securities in which the Fund has invested. However, the price at which an investor may buy or sell shares of the Fund is at the Fund s market price, as determined by supply of and demand for the Fund s shares.
- v The Barclays Capital (formerly Lehman Brothers) U.S. Corporate High Yield 2% Issuer Cap Index is an index of the 2% Issuer Cap component of the Barclays Capital U.S. Corporate High Yield Index, which covers the U.S. dollar-denominated, non-investment grade fixed-rate, taxable corporate bond market.
- vi Lipper, Inc., a wholly-owned subsidiary of Reuters, provides independent insight on global collective investments. Returns are based on the 12-month period ended September 30, 2008, including the reinvestment of all distributions, including returns of capital, if any, calculated

among the 5 funds in the Fund s Lipper category.
