TITLE CFO

iability and quality standards required by our customers. If our products or services have performance, reliability or quality problems, we may experience delays in the collection of accounts receivables, higher manufacturing or installation costs, additional warranty and service expense, and reduced, cancelled or discontinued orders.

Additionally, performance, reliability or quality claims from our customers, with or without merit, could result in costly and time-consuming litigation that could require significant time and attention of management and involve significant monetary damages.

Price fluctuations and supply constraints in the steel and iron markets could reduce our profit margins or prevent us from meeting delivery schedules to our customers.

Our business is dependent on the prices and supply of steel and iron, which are the principal raw materials used in our products. The steel and iron industries are highly cyclical in nature, and steel and iron prices have been volatile in recent years and may remain volatile in the future. Steel and iron prices are influenced by numerous factors beyond our control, including general economic conditions, competition, labor costs, production costs, import duties and other trade restrictions. In 2007 and early 2008, there were unusually rapid and significant increases in steel and iron prices and severe shortages in the steel and iron industries due in part to increased demand from China's expanding economy and high energy prices. These increases were followed in the second half of 2008 by significant decreases. We do not have any long-term contracts for the purchase of steel and iron and normally do not maintain inventories of steel and iron in excess of our current production requirements. Steel and iron may not remain available to us at competitive prices. If the available supply of steel and iron declines, we could experience price increases that we are not able to pass on to our customers, a deterioration of service from our suppliers or interruptions or delays that may cause us not to meet delivery schedules to our customers. Any of these problems could adversely affect our results of operations and financial condition.

Expansion of our business may strain our management and operational infrastructure and impede our ability to meet any increased demand for our products. In addition, we may need additional funding to support our growth, and this funding may not be available to us.

Our business plan is to grow significantly our operations by meeting the anticipated growth in demand for existing products, and by introducing new products. Our planned growth includes the continued development of our turbine manufacturing business and the development of our industrial parts and machinery equipment business. Growth in our businesses may place a significant strain on our personnel, management, financial systems and other resources. Our business growth also presents numerous risks and challenges, including:

- our ability successfully and rapidly to expand sales to potential customers in response to potentially increasing demand;
 - the costs associated with such growth, which are difficult to quantify, but could be significant; and
 - rapid technological change.

To accommodate this growth and compete effectively, we may need to obtain additional funding to improve and expand our manufacturing facilities, information systems, procedures and controls and to expand, train, motivate and manage existing and additional employees. Funding may not be available in a sufficient amount or on favorable terms, if at all. If we are not able to manage these activities and implement these strategies successfully to expand to meet any increased demand, our operating results could suffer.

We depend heavily on key personnel, and turnover of key employees and senior management could harm our business.

Our future business and results of operations depend in significant part upon the continued contributions of our key technical and senior management personnel. They also depend in significant part upon our ability to attract and retain additional qualified management, technical, marketing and sales and support personnel for our operations. If we lose a key employee, if a key employee fails to perform in his or her current position, or if we are not able to attract and retain skilled employees as needed, our business could suffer. Significant turnover in our senior management could significantly deplete institutional knowledge held by our existing senior management team. We depend on the skills and abilities of these key employees in managing the manufacturing, technical, marketing and sales aspects of our business, any part of which could be harmed by turnover in the future.

We enjoy certain preferential tax concessions, and the loss of these preferential tax concessions would cause our tax liabilities to increase and our profitability to decline.

On January 1, 2008, the Law of the People's Republic of China on Enterprise Income Tax, or the EIT Law, became effective. In accordance with the EIT Law, the corporate income tax rate was set at 25% for all enterprises. However, certain industries and projects, such as enterprises with foreign investors, may enjoy favorable tax treatment pursuant to the EIT Law and its implementing rules. For 2010, Wuhan Blower and Wuhan Generating were subject to a 12.5% income tax rate. We expect that our operating subsidiaries will be subject to the same rates in 2011.

We may not continue to qualify for this preferential tax treatment. Also, Chinese tax regulations could change. If we do not continue to receive our reduced income tax rate, our tax liabilities will increase and our net income will decrease accordingly.

Under the EIT Law, we may be classified as a “resident enterprise” for PRC tax purposes, which may subject us to PRC enterprise income tax for any dividends we receive from our Chinese subsidiaries and to PRC income tax withholding for any dividends we pay to our non-PRC stockholders.

Under the EIT Law, an enterprise established outside of China whose “de facto management bodies” are located in China is considered a “resident enterprise” and is subject to the 25% enterprise income tax rate on its worldwide income. The EIT Law and its implementing rules are relatively new and it is unclear how tax authorities will determine the tax residency of enterprises established outside of China.

Based on a recent Notice issued by the State Administration of Taxation, an enterprise incorporated in an offshore jurisdiction and controlled by a Chinese enterprise or group will be classified as a resident enterprise if (i) its senior management in charge of daily operations reside or perform their duties mainly in China; (ii) its financial or personnel decisions are made or approved by bodies or persons in China; (iii) substantial assets and properties, accounting books, corporate chops, board and stockholder minutes are kept in China; and (iv) at least half of its directors or senior management resides in China.

All of our management is currently based in China. If the PRC tax authorities determine that our U.S. holding company is a “resident enterprise” for PRC enterprise income tax purposes, we may be subject to an enterprise income tax rate of 25% on our worldwide taxable income. The “resident enterprise” classification also could subject us to a 10% withholding tax on any dividends we pay to our non-PRC stockholders if the relevant PRC authorities determine that such income is PRC-sourced income. In addition to the uncertainties regarding the interpretation and application of the new “resident enterprise” classification, the EIT Law may change in the future, possibly with retroactive effect. If we are classified as a “resident enterprise” and we incur these tax liabilities, our net income will decrease accordingly.

Risks Related to the Market for Our Stock and Our Capital Structure

The issuance of shares of common stock upon the exercise or conversion of outstanding securities may cause significant dilution to our stockholders and may have an adverse impact on the market price of our common stock.

As of May 12, 2011, there were 12,964,286 shares of our common stock issuable upon conversion of outstanding Series A Convertible Preferred Stock and Series B Convertible Preferred Stock and exercise of outstanding warrants and options. The issuance of our shares upon the exercise or conversion of these securities will increase the number of shares of our common stock outstanding, which could depress the market price of our common stock.

The perceived risk of dilution may cause our stockholders to sell their common stock, which would contribute to a downward movement in the price of our common stock. Moreover, the perceived risk of dilution and the resulting downward pressure on our stock price could encourage investors to engage in short sales of our common stock. By increasing the number of shares offered for sale, material amounts of short selling could further contribute to progressive price declines in our common stock.

We are a holding company and rely on the receipt of dividends from our operating subsidiaries. We may encounter limitations on the ability of our subsidiaries to pay dividends to us.

As a holding company, we have no direct business operations other than the ownership of our operating subsidiaries. Our ability to pay dividends and meet other obligations depends upon the receipt of dividends or other payments from our operating subsidiaries. In addition, our operating subsidiaries, from time to time, may be subject to restrictions on their ability to make distributions to us, including as a result of restrictive covenants in loan agreements, restrictions on the conversion of local currency into U.S. dollars or other hard currency and other regulatory restrictions relating to doing business in China as discussed below. If future dividends are paid in Renminbi, fluctuations in the exchange rate for the conversion of Renminbi into U.S. dollars may reduce the amount received by U.S. stockholders upon conversion of the dividend payment into U.S. dollars.

The ability of our Chinese operating subsidiaries to pay dividends may be restricted due to their corporate structure.

All of our operations are conducted in China and substantially all of our revenues are generated in China. Chinese regulations currently permit the payment of dividends only out of accumulated profits as determined in accordance with Chinese accounting standards and regulations. This calculation may differ from the one performed under generally accepted accounting principles in the United States, or U.S. GAAP. As a result, we may not receive sufficient distributions from our Chinese subsidiaries to enable us to make dividend distributions to our stockholders in the future. The limitations on distributions of the profits of our Chinese operating subsidiaries could negatively affect our financial condition and assets, even if our U.S. GAAP financial statements indicate that our operations have been profitable.

Currently, our subsidiaries in China are the only significant sources of revenues or investment holdings for the payment of dividends. If they do not accumulate sufficient profits under Chinese accounting standards and regulations, we will be unable to pay any dividends.

We are prohibited from declaring dividends on our common stock or acquiring any of our equity securities so long as our Series A Convertible Preferred Stock remains outstanding.

Pursuant to the terms of the Series A Convertible Preferred Stock Purchase Agreement, which was entered into in connection with the February 2007 private placement, we cannot declare or pay any dividends or make any other distributions to any holders of common stock or acquire any of our equity securities so long as any of the Series A Convertible Preferred Stock is outstanding. While our Series A Convertible Preferred Stock remains outstanding, our holders of common stock will have to rely solely on stock price appreciation for any return on their investment.

Compliance with changing regulation of corporate governance and public disclosure will result in additional expenses and pose challenges for our management team.

Changing laws, regulations and standards relating to corporate governance and public disclosure, including the Dodd-Frank Wall Street Reform and Consumer Protection Act and the rules and regulations promulgated thereunder, the Sarbanes-Oxley Act and SEC regulations, have created uncertainty for public companies and significantly increased the costs and risks associated with accessing the U.S. capital markets. Our management team, which has limited experience managing a U.S. public company, will need to devote significant time and financial resources to comply with both existing and evolving standards for public companies, which will lead to increased general and administrative expenses and a diversion of management time and attention from revenue generating activities to compliance activities.

Climate change and related regulatory responses may impact our business.

Climate change as a result of emissions of greenhouse gases is a significant topic of discussion and may generate U.S. federal and other regulatory responses in the near future. It is impracticable to predict with any certainty the impact of climate change on our business or the regulatory responses to it, although we recognize that they could be significant. The most direct impact is likely to be an increase in energy costs, which would increase slightly our operating costs, primarily through increased utility and transportation costs. In addition, many of our consumers operate power plants and any restrictions or penalties on their operations could adversely affect their demand for our products. However, it is too soon for us to predict with any certainty the ultimate impact, either directionally or quantitatively, of climate change and related regulatory responses.

To the extent that climate change increases the risk of natural disasters or other disruptive events in the areas in which we operate, we could be harmed. While we maintain business recovery plans that are intended to allow us to recover from natural disasters or other events that can be disruptive to our business, our plans may not fully protect us from all such disasters or events.

Our principal stockholder has the ability to control our operations, including the election of our directors.

Fame Good International Limited, a holding company controlled by our Chairman of the Board, Xu Jie, is the owner of approximately 61.1% of our outstanding voting securities (excluding shares of our Series A and Series B Convertible Preferred Stock which, until converted into common stock, only vote as a class on certain matters affecting such preferred stock). As a result, Mr. Xu possesses significant influence, giving him the ability, among other things, to elect each member of our Board of Directors and to authorize or prevent proposed significant corporate transactions. His ownership and control also may have the effect of delaying or preventing a future change in control, impeding a merger, consolidation, takeover or other business combination or discouraging a potential acquirer from making a tender offer. Additionally, Mr. Xu's interests may differ from the interests of our other stockholders.

Certain provisions of our Articles of Incorporation may make it more difficult for a third party to effect a change in control.

Our Articles of Incorporation authorize the Board of Directors to issue up to 50,000,000 shares of preferred stock. The preferred stock may be issued in one or more series, the terms of which may be determined at the time of issuance by the Board of Directors without further action by the stockholders. These terms may include voting rights including the right to vote as a series on particular matters, preferences as to dividends and liquidation, conversion rights, redemption rights and sinking fund provisions. The issuance of any preferred stock could diminish the rights of holders of our common stock, and therefore could reduce the value of such common stock. In addition, specific rights granted to future holders of preferred stock could be used to restrict our ability to merge with, or sell assets to, a third party. The ability of the Board of Directors to issue preferred stock could make it more difficult, delay, discourage, prevent or make it more costly to acquire or effect a change in control, which in turn could prevent the stockholders from recognizing a gain in the event that a favorable offer is extended and could materially and negatively affect the market price of our common stock.

Risks Related to Doing Business in China

The Chinese government exerts substantial influence over the manner in which we must conduct our business activities.

In the last 30 years, despite a process of devolution of regulatory control to provincial and local levels and resulting economic autonomy and private economic activities, the Chinese central government has exercised and continues to exercise substantial control over virtually every sector of the Chinese economy through regulation and state ownership. Our ability to operate in China may be harmed by changes in its laws and regulations, including those relating to taxation, import and export tariffs, environmental regulations, land use rights, property and other matters. We believe that our operations in China are in material compliance with all applicable legal and regulatory requirements. However, the central or local governments of the jurisdictions in which we operate may impose new, stricter regulations or interpretations of existing regulations that would require additional expenditures and efforts on our part to ensure our compliance with such regulations or interpretations.

Accordingly, government actions in the future, including any decision to adjust economic policies or even to return to a more centrally planned economy or regional or local variations in the implementation of economic policies, could have a significant effect on economic conditions in China or particular regions thereof, and could require us to divest ourselves of any interest we then hold in Chinese properties or joint ventures.

Restrictions on currency exchange may limit our ability to receive and use our revenues effectively.

The majority of our revenues are settled in Renminbi, and restrictions on currency exchanges may limit our ability to use revenue generated in Renminbi to fund any future business activities outside China or to make dividend or other payments in U.S. dollars. Although the Chinese government introduced regulations in 1996 to allow greater convertibility of the Renminbi for current account transactions, significant restrictions still remain, including primarily the restriction that foreign investment enterprises may only buy, sell or remit foreign currencies after providing valid commercial documents at those banks in China authorized to conduct foreign exchange business. In addition, conversion of Renminbi for capital account items, including direct investment and loans, is subject to governmental approval in China, and companies are required to open and maintain separate foreign exchange accounts for capital account items. We cannot be certain that the Chinese regulatory authorities will not impose more stringent restrictions on the convertibility of the Renminbi.

The foreign currency exchange rate between U.S. Dollars and Renminbi could adversely affect our financial condition and the value of our common stock.

The value of our common stock will be affected by the exchange rate between U.S. dollars and Renminbi, and between those currencies and other currencies in which our sales may be denominated. For example, to the extent that we need to convert U.S. dollars into Renminbi for our operational needs and should the Renminbi appreciate against the U.S. dollar at that time, our financial position, the business of the Company and the price of our common stock may be harmed. Conversely, if we decide to convert our Renminbi into U.S. dollars for the purpose of declaring dividends on our capital stock or for other business purposes and the U.S. dollar appreciates against the Renminbi, the U.S. dollar equivalent of our earnings from our subsidiaries in China would be reduced.

Until 1994, the Renminbi experienced a gradual but significant devaluation against most major currencies, including the U.S. dollar, and there was a significant devaluation of the Renminbi on January 1, 1994 in connection with the replacement of the dual exchange rate system with a unified managed floating rate foreign exchange system. Since 1994, the value of the Renminbi relative to the U.S. dollar has remained stable and has appreciated against the U.S. dollar. Countries, including the United States, have argued that the Renminbi is artificially undervalued due to China's current monetary policies and have pressured China to allow the Renminbi to float freely in world markets. In July 2005, the PRC government changed its policy of pegging the value of the Renminbi to the U.S. dollar. Under the new policy the Renminbi is permitted to fluctuate within a narrow and managed band against a basket of designated foreign currencies. Since then, the Renminbi has appreciated by more than 24% against the U.S. dollar. While the international reaction to the Renminbi revaluation has generally been positive, there remains significant international pressure on the PRC government to adopt an even more flexible currency policy, which could result in further and more significant appreciation of the Renminbi against the U.S. dollar.

Inflation in the PRC could negatively affect our profitability and growth.

While the PRC economy has experienced rapid growth, such growth has been uneven among various sectors of the economy and in different geographical areas of the country. Rapid economic growth can lead to growth in the money supply and rising inflation. During the past 16 years, the rate of inflation in China has been as high as approximately 27.7% and China has experienced deflation as low as approximately minus 2.2%. If prices for our products and services rise at a rate that is insufficient to compensate for the rise in the costs of supplies such as raw materials, it may have an adverse effect on our profitability.

PRC regulations relating to acquisitions of PRC companies by foreign entities may create regulatory uncertainties that could restrict or limit our ability to operate.

In October 2005, the PRC State Administration of Foreign Exchange, or SAFE, issued a Notice on Relevant Issues concerning Foreign Exchange Administration for Domestic Residents to Engage in Financing and in Return Investment via Overseas Special Purpose Companies.

In accordance with the notice, if an acquisition of a PRC company by an offshore company controlled by PRC residents has been confirmed by a Foreign Investment Enterprise Certificate prior to the promulgation of the notice, the PRC residents must each submit a registration form to the local provincial SAFE branch with respect to their establishment of an offshore company and also must file an amendment to such registration if the offshore company experiences material events, such as changes in the share capital, share transfer, mergers and acquisitions, spin-off transaction or use of assets in China to guarantee offshore obligations. The notice also provides that failure to comply with the registration procedures set forth therein may result in restrictions on our PRC resident stockholders and subsidiaries. Pending the promulgation of detailed implementation rules, the relevant government authorities are reluctant to commence processing any registration or application for approval required under the SAFE notices.

In addition, on August 8, 2006, the Ministry of Commerce (“MOFCOM”), joined by the State-Owned Assets Supervision and Administration Commission of the State Council, State Administration of Taxation, State Administration for Industry and Commerce, China Securities Regulatory Commission and SAFE, amended and released the Provisions for Foreign Investors to Merge and Acquire Domestic Enterprises, new foreign-investment rules which took effect September 8, 2006, superseding much, but not all, of the guidance in the prior SAFE circulars. These rules significantly revised China’s regulatory framework governing onshore-offshore restructurings and how foreign investors can acquire domestic enterprises. These rules signify greater PRC government attention to cross-border merger, acquisition and other investment activities, by confirming MOFCOM as a key regulator for issues related to mergers and acquisitions in China and requiring MOFCOM approval of a broad range of merger, acquisition and investment transactions. Further, the rules establish reporting requirements for acquisition of control by foreigners of companies in key industries, and reinforce the ability of the Chinese government to monitor and prohibit foreign control transactions in key industries.

These rules may significantly affect the means by which onshore-offshore restructurings are undertaken in China in connection with offshore private equity and venture capital financings, mergers and acquisitions. It is expected that such transactional activity in China in the near future will require significant case-by-case guidance from MOFCOM and other government authorities as appropriate. It is anticipated that application of the rules will be subject to significant administrative interpretation, and we will need to closely monitor how MOFCOM and other ministries apply the rules to ensure that our PRC and offshore activities continue to comply with PRC law. Given the uncertainties regarding interpretation and application of the rules, we may need to expend significant time and resources to maintain compliance.

It is uncertain how our business operations or future strategy will be affected by the interpretations and implementation of the SAFE notices and rules.

Failure to comply with the United States Foreign Corrupt Practices Act could subject us to penalties and other adverse consequences.

We are subject to the United States Foreign Corrupt Practices Act, which generally prohibits United States companies from engaging in bribery or other prohibited payments to foreign officials for the purpose of obtaining or retaining business. In addition, we are required to maintain records that accurately and fairly represent our transactions and have an adequate system of internal accounting controls. Chinese companies and some other foreign companies, including some that may compete with us, are not subject to these prohibitions, and therefore may have a competitive advantage over us. Corruption, extortion, bribery, pay-offs, theft and other fraudulent practices occur from time to time in the PRC, and our executive officers and employees were not subject to the United States Foreign Corrupt Practices Act prior to the completion of the share exchange in February 2007. If our employees or other agents are found to have engaged in such practices, we could suffer severe penalties and other consequences that may have a material adverse effect on our business, financial condition and results of operations.

We may have difficulty establishing adequate management, legal and financial controls in the PRC.

PRC companies historically have not adopted a Western style of management and financial reporting concepts and practices, which includes strong corporate governance, internal controls and computer, financial and other control systems. As a result, we may experience difficulty in establishing management, legal and financial controls, collecting financial data and preparing financial statements, books of account and corporate records and instituting business practices that meet standards required of U.S. public companies. Therefore, we may, in turn, experience difficulties in implementing and maintaining adequate internal controls as required under Section 404 of the Sarbanes-Oxley Act. This may result in significant deficiencies or material weaknesses in our internal controls which could impact the reliability of our financial statements and prevent us from complying with SEC rules and regulations and the requirements of the Sarbanes-Oxley Act. Any such deficiencies, weaknesses or lack of compliance could have a material adverse effect on our business.

Our business may be adversely affected as a result of China's entry into the World Trade Organization ("WTO") because the preferential tax treatments available to us may be discontinued and foreign manufacturers may compete with us in the PRC.

The PRC became a member of the WTO on December 11, 2001. The current tax benefits that we enjoy may be discontinued as a result of the PRC's membership in the WTO. If this happened, our profitability would be adversely affected. In addition, we may face additional competition from foreign manufacturers if they set up their production facilities in the PRC or form Sino-foreign joint ventures with our competitors in the PRC. In the event that we fail to maintain our competitiveness against these competitors, our profitability may be adversely affected.

You may experience difficulties in effecting service of legal process, enforcing foreign judgments or bringing original legal actions in China based upon U.S. laws, including the federal securities laws or other foreign laws, against us or our management.

All of our current operations are conducted in China. Moreover, the majority of our officers and directors are currently nationals and residents of China. All or substantially all of the assets of these persons are located outside the United States and in the PRC. As a result, it may not be possible to effect service of process upon these persons within the United States or elsewhere outside China. In addition, uncertainty exists as to whether the courts of China would recognize or enforce judgments of U.S. courts obtained against us or our officers and/or directors predicated upon the civil liability provisions of the securities laws of the United States or any state thereof, or be competent to hear original legal actions brought in China against us or such persons predicated upon the securities laws of the United States or any state thereof.

Any recurrence of severe acute respiratory syndrome, or SARS, the H1N1 virus (swine flu) or another widespread public health problem, could harm our operations.

A renewed outbreak of SARS or another widespread public health problem such as new strains of avian influenza or the H1N1 virus (swine flu) in China could have a negative effect on our operations.

Our operations may be impacted by a number of health-related factors, including the following:

- quarantines or closures of some of our manufacturing facilities or offices which would severely disrupt our operations, and
- the sickness or death of our key officers and employees.

Any of the foregoing events or other unforeseen consequences of public health problems could damage our operations.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds.

None.

Item 3. Defaults Upon Senior Securities.
