PROSPECTUS SUPPLEMENT

(To Prospectus dated January 12, 2004)

1,640,000 Common Units

Representing Limited Partner Interests

We are offering 1,640,000 common units representing limited partner interests of Energy Transfer Partners, L.P. to 10 purchasers in a privately negotiated transaction pursuant to this prospectus supplement at a price of \$31.95 per common unit.

Investing in the common units involves risk. See Risk Factors beginning on page S-4 of this prospectus supplement and on page 6 of the accompanying prospectus.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved these securities or determined if this prospectus supplement or the accompanying prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

SUMMARY

This summary highlights information contained elsewhere in this prospectus supplement. You should read the entire prospectus supplement, the accompanying prospectus, the documents incorporated by reference and the other documents to which we refer for a more complete understanding of this offering. You should read Risk Factors beginning on page S-4 of this prospectus supplement and page 6 of the accompanying prospectus for more information about important risks that you should consider before buying common units in this offering. The information presented in this prospectus supplement assumes that the underwriters do not exercise their over-allotment option. Throughout this prospectus supplement and the accompanying prospectus, we refer to ourselves, Energy Transfer Partners, L.P., and our predecessor, Heritage Propane Partners, L.P., as we, us, our or Energy Transfer Partners.

Energy Transfer Partners, L.P.

We are a rapidly-growing master limited partnership engaged in the natural gas midstream, transportation and storage business, with operations in Texas and Louisiana, and in the retail propane marketing business, with operations in 33 states.

Our midstream, transportation and storage business owns and/or operates approximately 11,700 miles of natural gas gathering and transportation pipelines, three natural gas processing plants, two of which are currently connected to our gathering systems, 14 natural gas treating facilities and three natural gas storage facilities. Our midstream segment focuses on the transportation, gathering, compression, treating, processing and marketing of natural gas, and its operations are currently concentrated in the Austin Chalk trend of southeast Texas, the Permian Basin of west Texas, the Barnett Shale in north Texas and the Bossier Sands in east Texas. Our midstream segment also includes the recently acquired Houston Pipeline System which is comprised of approximately 4,200 miles of intrastate natural gas pipeline, the 65 Bcf of working gas underground Bammel storage reservoir and related transportation assets. The Houston Pipeline System has access to multiple sources of historically significant natural gas supply reserves from south Texas, the Gulf Coast, east Texas and the western Gulf of Mexico and is directly connected to major gas distribution, electric and industrial load centers in Houston, Corpus Christi, Texas City, Baytown, Beaumont and Port Arthur. Our transportation and storage segment focuses on the transportation of natural gas through the Oasis pipeline, our Bossier pipeline, our natural gas pipeline and storage assets that we refer to as the ET Fuel System and certain transportation assets of the recently acquired Houston Pipeline System. The Oasis pipeline is a 583-mile natural gas pipeline that directly connects the Waha Hub, a major natural gas trading center located in the Permian Basin of west Texas, to the Katy Hub, a major natural gas trading center near Houston, Texas. The Bossier pipeline, which became commercially operational in June 2004, connects natural gas supplies in east Texas to our Katy pipeline. The ET Fuel System, which serves some of the most active drilling areas in the United States, is comprised of approximately 2,000 miles of intrastate natural gas pipeline and related natural gas storage facilities located in Texas. With approximately 460 receipt and/or delivery points, including interconnects with pipelines providing direct access to power plants and interconnects with other intrastate and interstate pipelines, the ET Fuel System is strategically located near high-growth production areas and major markets such as the Waha Hub, the Katy Hub and the Carthage Hub, three major natural gas trading centers located in Texas. The Houston Pipeline System consists of six main transportation pipelines and three market area loops and has direct access to multiple market hubs at Katy, the Houston Ship Channel, Ague Dulce and through its operation of the Bammel storage facility.

In April, 2005, we announced that we had completed the sale of our Oklahoma gathering, treating and processing assets, which we refer to as our Elk City System, to Atlas Pipeline Partners, L.P.

We are the fourth largest retail propane marketer in the United States, serving more than 650,000 customers from 311 customer service locations. Our propane operations extend from coast to coast, with concentrations in the western, upper midwestern, northeastern and

southeastern regions of the United States.

Index to Financial Statements

We were originally formed in conjunction with our initial public offering as Heritage Propane Partners, L.P. in June 1996. In January 2004, we combined the propane operations of Heritage Propane Partners with the natural gas midstream and transportation operations of La Grange Acquisition conducted under the name Energy Transfer Company. We refer to this combination, along with the incurrence of debt and the issuance of our equity securities in connection with that combination, as the Energy Transfer Transactions. In March 2004, we changed our name to Energy Transfer Partners, L.P.

Our executive offices are located at 2838 Woodside Street, Dallas, Texas 75204. Our telephone number is (214) 981-0700. We maintain a website at <http://www.energytransfer.com> that provides information about our business and operations. Information contained on this website, however, is not incorporated into or otherwise a part of this prospectus.

RISK FACTORS

An investment in our common units involves a high degree of risk. You should carefully consider the following risk factors included below and under the caption "Risk Factors" beginning on page 3 of the accompanying prospectus, together with all of the other information included in, or incorporated by reference into, this prospectus supplement in evaluating an investment in our common units. If any of these risks were to occur, our business, financial condition or results of operations could be adversely affected. In that case, the trading price of our common units could decline and you could lose all or part of your investment.

We may be unable to successfully integrate the operations of the ET Fuel System and the Houston Pipeline System with our operations and to realize all of the anticipated benefits of the acquisition of the ET Fuel System and the Houston Pipeline System.

Integration of the ET Fuel System and the Houston Pipeline System with our business and operations will be a complex, time consuming and costly process. Failure to successfully integrate the ET Fuel System and the Houston Pipeline System with our business and operations in a timely manner may have a material adverse effect on our business, financial condition and results of operations. The difficulties of combining the companies include, among other things:

operating a significantly larger combined company and integrating additional midstream operations to our existing operations;

the necessity of coordinating geographically disparate organizations, systems and facilities;

integrating personnel with diverse business backgrounds and organizational cultures; and

consolidating corporate and administrative functions.

In addition, we may not realize all of the anticipated benefits from our acquisition of the ET Fuel System and the Houston Pipeline System due to a number of potential factors including the impact of competition, fluctuations in markets, higher costs and difficulties in integrating operations.

We will also be exposed to risks that are commonly associated with transactions similar to this acquisition, such as unanticipated liabilities and costs, some of which may be material, and diversion of management's attention. As a result, the anticipated benefits of the acquisition may not be fully realized, if at all.

We encounter competition from other midstream, transportation and storage companies and propane companies.

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

We experience competition in all of our markets. Our principal areas of competition include obtaining natural gas supplies for the Southeast Texas System and natural gas transportation customers for the Oasis Pipeline, the Bossier Pipeline and the ET Fuel System. Our competitors include major integrated oil companies, interstate and intrastate pipelines and companies that gather, compress, treat, process, transport and market natural gas. The Oasis Pipeline competes directly with two other major intrastate pipelines that link the Waha Hub and the Houston area, one of which is owned by Duke Energy Field Services, LLC and the other one of which is owned by El Paso Corporation and American Electric Power Service Corporation. The Southeast Texas System competes with natural gas gathering and processing systems owned by Duke Energy Field Services, LLC. The Bossier Pipeline competes with other natural gas transportation pipelines that serve the Bossier Sands area in east Texas and the Barnett Shale area of the Fort Worth Basin in north Texas. The ET Fuel System competes with a number of other natural gas pipelines, including interstate and intrastate pipelines that link the Waha Hub and the Dallas/Ft. Worth area and other pipelines that serve the east central Texas and south Texas markets. Pipelines that we compete with in these areas include those owned by Atmos Energy Corporation, Enterprise Products Partners, L.P. and Enbridge, Inc. Many of our competitors have greater financial resources and access to larger natural gas supplies than we do.

The acquisition of the Houston Pipeline System, which will increase the number of interstate pipelines and natural gas markets to which we have access, will also expand our principal areas of competition to areas such as southeast Texas and the Texas Gulf Coast. As a result of our expanded market presence and diversification, we will face additional competitors, such as major integrated oil companies, interstate and intrastate pipelines and companies that gather, compress, treat, process, transport and market natural gas, that have greater financial resources and access to larger natural gas supplies than we do.

Our propane business competes with a number of large national and regional propane companies, and several thousand small independent propane companies. Because of the relatively low barriers to entry into the retail propane market, there is potential for small independent propane retailers, as well as other companies that may not currently be engaged in retail propane distribution, to compete with our retail outlets. As a result, we are always subject to the risk of additional competition in the future. Generally, warmer-than-normal weather further intensifies competition. Most of our propane retail branch locations compete with several other marketers or distributors in their service areas. The principal factors influencing competition with other retail propane marketers are:

price,

reliability and quality of service,

responsiveness to customer needs,

safety concerns,

long-standing customer relationships,

the inconvenience of switching tanks and suppliers, and

the lack of growth in the industry.

We are exposed to the credit risk of our customers, and an increase in the nonpayment and nonperformance by our customers could reduce our ability to make distributions to our unitholders.

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

Risks of nonpayment and nonperformance by our customers are a major concern in our business. Participants in the energy industry have been subjected to heightened scrutiny from the financial markets in light of past collapses and failures of other energy companies. We are subject to risks of loss resulting from nonpayment or nonperformance by our customers. Any increase in the nonpayment and nonperformance by our customers could reduce our ability to make distributions to our unitholders.

S-4

Table of Contents

Index to Financial Statements

Our increased debt level may limit our future financial and operating flexibility.

As of February 28, 2005, we had approximately \$1.8 billion of consolidated debt outstanding, which represents 67% of our total book capitalization as of that date. As a result of the acquisition of the ET Fuel System and the Houston Pipeline System and the related financings, our financial leverage is higher. Our level of indebtedness affects our operations in several ways, including, among other things:

a significant portion of our cash flow from operations will be dedicated to the payment of principal and interest on outstanding debt and will not be available for other purposes, including payment of distributions;

covenants contained in our existing debt arrangements require us to meet financial tests that may adversely affect our flexibility in planning for and reacting to changes in our business;

our ability to obtain additional financing for working capital, capital expenditures, acquisitions and general partnership purposes may be limited;

we may be at a competitive disadvantage relative to similar companies that have less debt; and

we may be more vulnerable to adverse economic and industry conditions as a result of our significant debt level.

The ET Fuel System and the Houston Pipeline System are subject to operational, regulatory and environmental risks.

The operations of the ET Fuel System and the Houston Pipeline System are similar in many ways to the operations conducted by our existing transportation assets, and as a result, are subject to similar operational risks, regulatory requirements, environmental liabilities and pipeline right-of-way issues as potentially exist for our current transportation assets as described in the accompanying prospectus. Please read "Risk Factors - Risks Related to our Midstream and Transportation Business" and "Business - Energy Transfer Company Regulation" in the accompanying prospectus.

In addition, the ET Fuel System and the Houston Pipeline System are subject to the jurisdiction of the TRRC. Generally, the TRRC has jurisdiction over all underground storage of natural gas in Texas, unless the facility is part of an interstate gas pipeline facility. Because the ET Fuel System and the Houston Pipeline System natural gas storage facilities are only connected to intrastate gas pipelines, they fall within the TRRC's jurisdiction. Under the TRRC's regulations, a natural gas storage facility must have a commission-issued permit to operate. Our purchase of the assets of the ET Fuel System from TXU Fuel Company required us to apply for transfers of the permits as operators of the storage facilities acquired from TXU Fuel Company. We have made applications for the transfer of these permits and are awaiting TRRC approval. Some changes to a permit, such as facility expansions and increases in the maximum operating pressure, must be approved through an amendment process before the TRRC. In addition, the TRRC must approve transfers of the permits. The TRRC's regulations also require all natural gas storage facilities to be operated to prevent waste, the uncontrolled escape of gas, pollution and danger to life or property. Accordingly, the TRRC requires natural gas storage facilities to implement certain safety, monitoring, reporting and record-keeping measures. Violations of the terms and provisions of a TRRC permit or a TRRC order or regulation can result in the modification, cancellation or suspension of an operating permit and/or civil penalties, injunctive relief, or both.

The ET Fuel System and the Houston Pipeline System are comprised of assets such as storage facilities for which we do not have operating experience.

The assets of the ET Fuel System and the Houston Pipeline System included storage facilities, which are a type of asset that we have limited experience operating. Operation of these assets will subject us to different governmental regulations and may result in increased costs. The success of our business strategy related to the operation of the ET

S-5

Table of Contents

Index to Financial Statements

Fuel System and the Houston Pipeline System is dependent upon our ability to capitalize on significant operating synergies to further enhance the value of the assets. If we are unable to operate these assets in accordance with our business strategy, it could have a material adverse effect on our results of operations.

Our storage business depends on neighboring pipelines to transport natural gas.

To obtain natural gas, our storage business depends on the pipelines to which they have access. Many of these pipelines are owned by parties not affiliated with us. Any interruption of service on those pipelines or adverse change in their terms and conditions of service could have a material adverse effect on our ability, and the ability of our customers, to transport natural gas to and from our facilities and a corresponding material adverse effect on our storage revenues. In addition, the rates charged by those interconnected pipelines for transportation to and from our facilities affect the utilization and value of our storage services. Significant changes in the rates charged by those pipelines or the rates charged by other pipelines with which the interconnected pipelines compete could also have a material adverse effect on our storage revenues.

We may not be able to fully execute our growth strategy if we encounter illiquid capital markets or increased competition for qualified assets.

Our strategy contemplates growth through the development and acquisition of a wide range of midstream, transportation, storage, propane and other energy infrastructure assets while maintaining a strong balance sheet. This strategy includes constructing and acquiring additional assets and businesses to enhance our ability to compete effectively and diversify our asset portfolio, thereby providing more stable cash flow. We regularly consider and enter into discussions regarding, and are currently contemplating, the acquisition of additional assets and businesses, stand alone development projects or other transactions that we believe will present opportunities to realize synergies and increase our cash flow.

We may require substantial new capital to finance the future development and acquisition of assets and businesses. Limitations on our access to capital will impair our ability to execute this strategy. Expensive capital will limit our ability to develop or acquire accretive assets. We may not be able to raise the necessary funds on satisfactory terms, if at all.

Consistent with our acquisition strategy, we are continuously engaged in discussions with potential sellers regarding the possible acquisition of additional assets or businesses. Such acquisition efforts may involve our participation in processes that involve a number of potential buyers, commonly referred to as "auction" processes, as well as situations where we believe we are the only party or one of a very limited number of potential buyers in negotiations with the potential seller. We can give you no assurance that our current or future acquisition efforts will be successful or that any such acquisition will be completed on terms considered favorable to us.

In addition, we are experiencing increased competition for the assets we purchase or contemplate purchasing. Increased competition for a limited pool of assets could result in us losing to other bidders more often or acquiring assets at higher prices. Either occurrence would limit our ability to fully execute our growth strategy. Our inability to execute our growth strategy may materially adversely impact the market price of our securities.

Our pipeline integrity program may impose significant costs and liabilities on us.

In December 2003, the U.S. Department of Transportation issued a final rule requiring pipeline operators to develop integrity management programs to comprehensively evaluate their pipelines, and take measures to protect pipeline segments located in what the rule refers to as high consequence areas. The final rule resulted from the enactment of the Pipeline Safety Improvement Act of 2002. The final rule was effective as of January 14, 2004. Based on the results of our current pipeline integrity testing programs, we estimate that compliance with this final rule for our existing transportation assets will result in capital costs of \$4.5 million during 2005 to 2010, as well as operating and maintenance costs of \$1.8 million during 2005 to 2010. We are continuing to assess the impact of this final rule on the ET Fuel System and the Houston Pipeline System and cannot predict any estimated compliance costs for those assets at this time. Integrity testing and assessment of all of these assets will continue, and the potential exists that results of such testing and assessment could cause us to incur even greater capital and operating expenditures for repairs or upgrades deemed necessary to ensure the continued safe and reliable operation of our pipelines.

S-6

Table of Contents

Index to Financial Statements

If we do not make acquisitions on economically acceptable terms, any future growth will be limited.

Our ability to grow and to increase distributions to unitholders is dependent principally on our ability to make acquisitions that are accretive to our distributable cash flow per unit. Our acquisition strategy is based, in part, on our expectation of ongoing divestitures of pipeline assets by large industry participants. A material decrease in such divestitures would limit our opportunities for future acquisitions and could adversely affect our operations and cash flows available for distribution to our unitholders.

In addition, we may be unable to make such accretive acquisitions for any of the following reasons, among others:

because we are unable to identify attractive acquisition candidates or negotiate acceptable purchase contracts with them;

because we are unable to raise financing for such acquisitions on economically acceptable terms; or

because we are outbid by competitors, some of which are substantially larger than us and have greater financial resources and lower costs of capital than we do.

Furthermore, even if we consummate acquisitions that we believe will be accretive, they may in fact result in no increase or even a decrease in distributable cash flow per unit. Any acquisition involves potential risks, including risks that we may:

fail to realize anticipated benefits, such as new customer relationships, cost-savings or cash flow enhancements;

decrease our liquidity by using a significant portion of our available cash or borrowing capacity to finance acquisitions;

significantly increase our interest expense or financial leverage if we incur additional debt to finance acquisitions;

encounter difficulties operating in new geographic areas or new lines of business;

incur or assume unanticipated liabilities, losses or costs associated with the business or assets acquired for which we are not indemnified or for which the indemnity is inadequate;

be unable to hire, train or retrain qualified personnel to manage and operate our growing business and assets;

less effectively manage our historical assets, due to the diversion of management's attention from other business concerns;

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

incur other significant charges, such as impairment of goodwill or other intangible assets, asset devaluation or restructuring charges.

If we consummate future acquisitions, our capitalization and results of operations may change significantly. As we determine the application of our funds and other resources, you will not have an opportunity to evaluate the economics, financial and other relevant information that we will consider.

On January 26, 2005, we consummated the acquisition of a controlling interest in the Houston Pipeline System for approximately \$825.0 million, subject to working capital adjustments. In addition, the payment for the inventory of working gas stored in the Bammel storage facility was financed through a short-term borrowing from a related party. We may be exposed to some or all of the risks described above in connection with this acquisition.

November 30, 2003	\$ 19.35	\$ 15.51	\$ 0.3250
February 29, 2004	21.33	18.78	0.3500
May 31, 2004	20.125	17.25	0.3750
August 31, 2004	21.69	18.935	0.4125
Fiscal 2005			
November 30, 2004	\$ 27.00	\$ 21.59	\$ 0.4375
February 28, 2005	32.55	25.925	0.4625
May 31, 2005	32.69	29.75	0.4875
August 31, 2005 (c)	33.99	32.00	

- (a) All common unit and cash distributions have been adjusted to reflect the 2-for-1 unit split that was effected in March 2005.
 (b) Distributions are shown in the quarter with respect to which they were declared.
 (c) Through June 17, 2005.

The last reported sales price of common units on the NYSE on June 17, 2005 was \$33.99 per common unit. As of June 17, 2005, there were approximately 55,000 individual common unitholders.

Table of Contents

Index to Financial Statements

TAX CONSIDERATIONS

The tax consequences to you of an investment in our common units will depend in part on your own tax circumstances. For a discussion of the principal federal income tax considerations associated with our operations and the purchase, ownership and disposition of our common units, see

Material Tax Considerations in the accompanying prospectus. You may wish to consult with your own tax advisor about the federal, state, local and foreign tax consequences peculiar to your circumstances.

Ownership of common units by tax-exempt entities, regulated investment companies and foreign investors raises issues unique to such persons. Recent legislation treats net income derived from the ownership of certain publicly traded partnerships (including us) as qualifying income to a regulated investment company. However, this legislation is only effective for taxable years beginning after October 22, 2004, the date of enactment. For taxable years beginning on or before the date of enactment, very little of our income will be qualifying income to a regulated investment company. Please read Material Tax Consequences Tax-Exempt Organizations and Other Investors in the accompanying prospectus.

Because of widespread state budget deficits, several states are evaluating ways to subject partnerships to entity-level taxation through the implementation of state income, franchise or other forms of taxation. If any state were to impose a tax upon us as an entity, our cash available for distribution would be reduced.

Table of Contents

Index to Financial Statements

PLAN OF DISTRIBUTION

We are selling the common units offered under this prospectus supplement directly to five investors in a privately negotiated transaction in which no party is acting as an underwriter. Subject to the terms of a purchase agreement dated June 17, 2005, the investors have agreed to purchase and we have agreed to sell to the investors 1,640,000 common units at a price of \$31.95 per common unit. The price per common unit was determined through negotiations with the investors based upon the market price for the common units.

We expect to deliver the common units through our transfer agent on June 20, 2005.

WHERE YOU CAN FIND MORE INFORMATION

We have filed a registration statement with the SEC under the Securities Act of 1933 that registers the securities offered by this prospectus. The registration statement, including the attached exhibits, contains additional relevant information about us. The rules and regulations of the SEC allow us to omit some information included in the registration statement from this prospectus.

In addition, we file annual, quarterly and other reports and other information with the SEC. You may read and copy any document we file at the SEC's public reference room at 450 Fifth Street, N.W., Washington, D.C. 20549. Please call the SEC at 1-800-732-0330 for further information on the operation of the SEC's public reference room. Our SEC filings are available on the SEC's web site at <http://www.sec.gov>. We also make available free of charge on our website, at <http://www.energytransfer.com>, all materials that we file electronically with the SEC, including our annual report on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, Section 16 reports and amendments to these reports as soon as reasonably practicable after such materials are electronically filed with, or furnished to, the SEC. Additionally, you can obtain information about us through the New York Stock Exchange, 20 Broad Street, New York, New York 10005, on which our common units are listed.

The SEC allows us to incorporate by reference the information we have filed with the SEC. This means that we can disclose important information to you without actually including the specific information in this prospectus by referring you to other documents filed separately with the SEC. These other documents contain important information about us, our financial condition and results of operations. The information incorporated by reference is an important part of this prospectus. Information that we file later with the SEC will automatically update and may replace information in this prospectus and information previously filed with the SEC.

We incorporate by reference in this prospectus the documents listed below:

our annual report on Form 10-K for the year ended August 31, 2004;

our definitive proxy statement filed by us under Section 14(a) of the Securities Exchange Act of 1934 on May 18, 2004;

our quarterly reports on Form 10-Q for the quarters ended November 30, 2004 and February 28, 2005;

our current reports on Form 8-K filed June 14, 2004 (as amended on June 23, 2004), September 23, 2004, October 25, 2004, November 1, 2004 (as amended on November 2, 2004), November 3, 2004, January 3, 2005, January 12, 2005 (with respect to Item 8.01 only), January 19, 2005, January 31, 2005 (with respect to Item 8.01 only), February 1, 2005 (as amended on March 17, 2005), March 11, 2005, March 16, 2005, and April 12, 2005;

the description of our common units in our registration statement on Form 8-A (File No. 1-11727) filed pursuant to the Securities Exchange Act of 1934 on May 16, 1996; and

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

all documents filed by us under Sections 13(a), 13(c), 14 or 15(d) of the Securities Exchange Act of 1934 between the date of this prospectus and the termination of the registration statement.

You may obtain any of the documents incorporated by reference in this prospectus from the SEC through the SEC's website at the address provided above. You also may request a copy of any document incorporated by reference in this prospectus (including exhibits to those documents specifically incorporated by reference in this document), at no cost, by visiting our internet website at www.energytransfer.com, or by writing or calling us at the following address:

Energy Transfer Partners, L.P.

GLOSSARY

The following is a description of the meanings of some of the oil and natural gas industry terms used in this prospectus supplement.

Bbl. One stock tank barrel, or 42 U.S. gallons liquid volume, used herein in reference to crude oil or other liquid hydrocarbons.

Bcf. One billion cubic feet of gas.

Bcf/d. One billion cubic feet of gas per day.

Btu. British thermal unit, which is heat required to raise the temperature of a one-pound mass of water from 58.5 to 59.5 degrees Fahrenheit.

Mcf/d. One thousand cubic feet of gas per day.

MMBtu. One million Btus.

MMcf/d. Million cubic feet of natural gas per day.

Reservoir. A porous and permeable underground formation containing a natural accumulation of producible natural gas and/or oil that is confined by impermeable rock or water barriers and is separate from other reservoirs.

PROSPECTUS

\$800,000,000

Energy Transfer Partners, L.P.

Common Units

Debt Securities

Heritage Operating, L.P.

Debt Securities

1,988,846

Common Units

Offered By Selling Unitholders

The following securities may be offered under this prospectus:

Common units representing limited partner interests in Energy Transfer Partners, L.P.;

Debt securities of Energy Transfer Partners, L.P.; and

Debt securities of Heritage Operating, L.P., in an aggregate initial offering price of \$800,000,000; and

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

Up to 1,988,846 common units offered by selling unitholders.

The aggregate initial offering price of the securities that we offer by this prospectus will not exceed \$800,000,000. We will offer the securities in amounts, at prices and on terms to be determined by market conditions at the time of our offerings. This prospectus describes only the general terms of these securities and the general manner in which we will offer the securities. The specific terms of any securities we offer will be included in a supplement to this prospectus. The prospectus supplement will describe the specific manner in which we will offer the securities and also may add, update or change information contained in this prospectus. The common units are traded on the New York Stock Exchange under the symbol ETP.

You should read this prospectus and the prospectus supplement carefully before you invest in any of our securities. This prospectus may not be used to consummate sales of our securities unless it is accompanied by a prospectus supplement.

Investing in our securities involves risk. You should carefully consider the risk factors described under Risk Factors beginning on page 3 of this prospectus before you make any investment in our securities.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or determined whether this prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

The date of this prospectus is January 12, 2004.

ABOUT THIS PROSPECTUS

This prospectus is part of a registration statement on Form S-3 that we have filed with the Securities and Exchange Commission using a shelf registration process. Under this shelf registration process, we may sell, in one or more offerings, up to \$800,000,000 in total aggregate offering price of securities described in this prospectus. In addition, the selling unitholders named in this prospectus may offer and sell up to 1,988,846 common units under this prospectus. This prospectus provides you with a general description of us and the securities offered under this prospectus. Unless otherwise provided in a prospectus supplement, we will not receive any proceeds from sales of common units by the selling unitholders.

Each time we or a selling unitholder sells securities under this prospectus, we will provide a prospectus supplement that will contain specific information about the terms of that offering and the securities being offered. The prospectus supplement also may add to, update or change information in this prospectus. If there is any inconsistency between the information in this prospectus and any prospectus supplement, you should rely on the information in the prospectus supplement. You should read carefully this prospectus, any prospectus supplement and the additional information described below under the heading **Where You Can Find More Information**.

As used in this prospectus, **we**, **us** and **our** and similar terms mean either or both of Energy Transfer Partners, L.P. and Heritage Operating, L.P. and their subsidiaries, unless the context indicates otherwise.

WHO WE ARE

We are a publicly traded Delaware limited partnership formed in conjunction with our initial public offering as Heritage Propane Partners, L.P. in June 1996. We are engaged in the natural gas midstream business through our operating subsidiary, La Grange Acquisition, L.P., and in the retail propane marketing business through our operating subsidiary, Heritage Operating, L.P. Following the completion of our transaction in January 2004, in which we combined the retail propane operations of Heritage Propane Partners with the natural gas midstream operations of Energy Transfer Company, we changed our name to Energy Transfer Partners, L.P.

Through La Grange Acquisition, a Texas limited partnership formed in October 2002, our midstream operations are conducted under the name Energy Transfer Company. Energy Transfer Company's operations are concentrated in the Austin Chalk trend of southeast Texas, the Anadarko Basin of western Oklahoma and the Permian Basin of west Texas. Through our ownership of the Energy Transfer Company operations, we own or have an interest in approximately 4,500 miles of natural gas gathering and transportation pipelines, three natural gas processing plants connected to our gathering systems and seven natural gas treating facilities.

Energy Transfer Company's operations are divided into two business segments, consisting of the midstream segment and the transportation segment. The midstream segment operations are conducted primarily in the Southeast Texas System and the Elk City System, and focus on the gathering of natural gas from over 1,400 producing wells, the compression of natural gas to facilitate its flow through Energy Transfer Company's gathering systems, the treating of natural gas to remove impurities to ensure that the natural gas meets pipeline quality specifications, the processing of natural gas to extract natural gas liquids, and the marketing of natural gas and natural gas liquids to third parties. Our transportation segment focuses on the transportation of natural gas through the Oasis Pipeline, a 583-mile natural gas pipeline that directly

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

connects the Waha Hub, a major natural gas market center located in the Permian Basin of west Texas to the Katy Hub, a major natural gas market center near Houston, Texas.

- 3 -

Table of Contents

Index to Financial Statements

Through Heritage Operating, we serve more than 650,000 customers from over 300 customer service locations in 31 states. Our propane operations extend from coast to coast, with concentrations in the western, upper midwestern, northeastern and southeastern regions of the United States.

Our partnership agreement limits our general partner's fiduciary duties to our unitholders and restricts the remedies available for actions taken by our general partner that might otherwise constitute breaches of fiduciary duty.

We maintain our principal executive offices at 8801 South Yale Avenue, Suite 310, Tulsa, Oklahoma 74137, and our telephone number is (918) 492-7272.

Index to Financial Statements

THE SUBSIDIARY GUARANTORS

Energy Transfer Partners, L.P. will, and Heritage Service Corp., Heritage-Bi State, L.L.C. and Heritage Energy Resources, L.L.C. may, unconditionally guarantee any series of debt securities of Heritage Operating, L.P. offered by this prospectus, as set forth in a related prospectus supplement. Heritage Operating, L.P., Heritage Service Corp., Heritage-Bi State, L.L.C. and Heritage Energy Resources, L.L.C. may unconditionally guarantee any series of debt securities of Energy Transfer Partners, L.P. offered by this prospectus, as set forth in a related prospectus supplement. As used in this prospectus, the term **Subsidiary Guarantors** means Heritage Service Corp., Heritage-Bi State, L.L.C. and Heritage Energy Resources, L.L.C. and also includes Heritage Operating, L.P. when discussing subsidiary guarantees of the debt securities of Energy Transfer Partners, L.P. The term **Guarantor** means Energy Transfer Partners, L.P. in its role as guarantor of the debt securities of Heritage Operating, L.P.

RISK FACTORS

Limited partner interests are inherently different from the capital stock of a corporation, although many of the business risks to which we are subject are similar to those that would be faced by a corporation engaged in a similar business. Before you invest in our securities, you should consider carefully the following risk factors, together with all of the other information included in this prospectus, any prospectus supplement and the documents we have incorporated by reference.

If any of the following risks actually were to occur, our business, financial condition or results of operations could be affected materially and adversely. In that case, we may be unable to make distributions to our unitholders or pay interest on, or the principal of, any debt securities, the trading price of our securities could decline and you could lose all or part of your investment.

Risks Related to our Midstream and Transportation Business

The profitability of our midstream and transportation business is dependent upon prices and market demand for natural gas and NGLs, which are beyond our control and have been volatile.

Our midstream and transportation business is subject to significant risks due to fluctuations in commodity prices. During the 11 months ended August 31, 2003, we generated approximately 54% of our gross margin from three types of contractual arrangements under which our margin is exposed to increases and decreases in the price of natural gas and NGLs—discount-to-index, percentage-of-proceeds and keep-whole arrangements.

For a portion of the natural gas gathered at the Southeast Texas System and the Elk City System, we purchase natural gas from producers at the wellhead at a price that is at a discount to a specified index price and then gather and deliver the natural gas to pipelines where we typically resell the natural gas at the index price. Generally, the gross margins we realize under these discount-to-index arrangements decrease in periods of low natural gas prices because these gross margins are based on a percentage of the index price. Accordingly, a decrease in the price of natural gas could have a material adverse effect on our results of operations.

For a portion of the natural gas gathered at the Southeast Texas System and the Elk City System, we enter into percentage-of-proceeds arrangements and keep-whole arrangements, pursuant to which we agree to gather and process natural gas received from the producers. Under percentage-of-proceeds arrangements, we generally sell the residue gas and NGLs at market prices and remit to the producers an agreed upon percentage of the proceeds based on an index price. In other cases, instead of remitting cash payments to the producer, we deliver an agreed upon percentage of the residue gas and NGL volumes to the producer and sell the volumes we keep to third parties at market prices. Under these arrangements our revenues and gross margins decline when natural gas prices and NGL prices decrease. Accordingly, a decrease in the price of natural gas or NGLs could have a material adverse effect on our results of operations. Under keep-whole arrangements, we generally sell the NGLs produced from our gathering and processing operations to third parties at market prices. Because the extraction of the NGLs from the natural gas during processing reduces the Btu content of the natural gas, we must either purchase natural gas at market prices for return to producers or make a cash payment to producers equal to the value of this natural gas. Under these arrangements, our revenues and gross margins decrease when the price of natural gas increases relative to the price of NGLs if we are not able to bypass our processing plants and sell the

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

unprocessed natural gas. Accordingly, an increase in the price of natural gas relative to the price of NGLs could have a material adverse effect on our results of operations.

- 6 -

Table of Contents

Index to Financial Statements

In the past, the prices of natural gas and NGLs have been extremely volatile, and we expect this volatility to continue. For example, during the 11 months ended August 31, 2003, the NYMEX settlement price for the prompt month contract ranged from a high of \$9.58 per MMBtu to a low of \$3.72 per MMBtu. A composite of the Mt. Belvieu average NGLs price based upon our average NGLs composition during the 11 months ended August 31, 2003 ranged from a high of approximately \$0.82 per gallon to a low of approximately \$0.41 per gallon.

Average realized natural gas sales prices for the 11 months ended August 31, 2003 substantially exceeded our historical realized natural gas prices as well as recent natural gas prices. For example, our average realized natural gas price increased \$2.31, or 85.0%, from \$2.72 per MMBtu for the nine months ended September 30, 2002 to \$5.03 per MMBtu for the 11 months ended August 31, 2003. On December 13, 2003, the NYMEX settlement price for January natural gas deliveries was \$6.95 per MMBtu, which was 38.2% higher than our average natural gas price for the 11 months ended August 31, 2003. Natural gas prices are subject to significant fluctuations, and there can be no assurance that natural gas prices will remain at the high level recently experienced.

The markets and prices for residue gas and NGLs depend upon factors beyond our control. These factors include demand for oil, natural gas and NGLs, which fluctuate with changes in market and economic conditions, and other factors, including:

- the impact of weather on the demand for oil and natural gas;
- the level of domestic oil and natural gas production;
- the availability of imported oil and natural gas;
- actions taken by foreign oil and gas producing nations;
- the availability of local, intrastate and interstate transportation systems;
- the availability and marketing of competitive fuels;
- the impact of energy conservation efforts; and
- the extent of governmental regulation and taxation.

Our success depends upon our ability to continually find and contract for new sources of natural gas supply.

In order to maintain or increase throughput levels on our gathering and transportation pipeline systems and asset utilization rates at our treating and processing plants, we must continually contract for new natural gas supplies. We may not be able to obtain additional contracts for natural gas supplies. The primary factors affecting our ability to connect new supplies of natural gas to our gathering systems include our success in

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

contracting for existing natural gas supplies that are not committed to other systems and the level of drilling activity near our gathering systems. The primary factors affecting our ability to attract customers to the Oasis Pipeline include our access to other natural gas pipelines, natural gas markets, natural gas-fired power plants and other industrial end-users and the level of drilling in areas connected to the Oasis Pipeline.

- 7 -

Table of Contents

Index to Financial Statements

Fluctuations in energy prices can greatly affect production rates and investments by third parties in the development of new oil and natural gas reserves. Drilling activity generally decreases as oil and natural gas prices decrease. We have no control over the level of drilling activity in the areas of operations, the amount of reserves underlying the wells and the rate at which production from a well will decline, sometimes referred to as the decline rate. In addition, we have no control over producers or their production decisions, which are affected by, among other things, prevailing and projected energy prices, demand for hydrocarbons, the level of reserves, geological considerations, governmental regulation and the availability and cost of capital.

A substantial portion of our assets, including our gathering systems and our processing and treating plants, are connected to natural gas reserves and wells for which the production will naturally decline over time. In particular, the Southeast Texas System covers portions of the Austin Chalk, Buda, Georgetown, Edwards, Wilcox and other producing formations in southeast Texas, which we collectively refer to as the Austin Chalk trend, and the Elk City System covers portions of the Anadarko basin in western Oklahoma. Both of these natural gas producing regions have generally been characterized by high initial flow rates followed by steep initial declines in production. Accordingly, our cash flows associated with these systems will also decline unless we are able to access new supplies of natural gas by connecting additional production to these systems. A material decrease in natural gas production in our areas of operation, as a result of depressed commodity prices or otherwise, would result in a decline in the volume of natural gas we handle, which would reduce our revenues and operating income. In addition, our future growth will depend, in part, upon whether we can contract for additional supplies at a greater rate than the rate of natural decline in our currently connected supplies.

We depend on certain key producers for our supply of natural gas on the Southeast Texas System and the Elk City System, the loss of any of these key producers could adversely affect our financial results.

For the 11 months ended August 31, 2003, Anadarko Petroleum Corp. and Chesapeake Energy Corp. supplied us with approximately 44% of the Southeast Texas System's natural gas supply, and Chesapeake Energy Corp. and Kaiser-Francis Oil Company and its affiliates supplied us with approximately 53% of the Elk City System's natural gas supply. To the extent that these and other producers may reduce the volumes of natural gas that they supply us, we would be adversely affected unless we were able to acquire comparable supplies of natural gas from other producers.

Federal, state or local regulatory measures could adversely affect our business.

As a natural gas gatherer and intrastate pipeline company, we are generally exempt from Federal Energy Regulatory Commission, or FERC, regulation under the Natural Gas Act of 1938, or NGA, but FERC regulation still significantly affects our business and the market for our products. In recent years, FERC has pursued pro-competitive policies in our regulation of interstate natural gas pipelines. However, we cannot assure you that FERC will continue this approach as it considers matters such as pipeline rates and rules and policies that may affect rights of access to natural gas transportation capacity. In addition, the rates, terms and conditions of some of the transportation services we provide on the Oasis Pipeline are subject to FERC regulation under Section 311 of the Natural Gas Policy Act, or NGPA. Under Section 311, rates charged for transportation must be fair and equitable, and amounts collected in excess of fair and equitable rates are subject to refund with interest.

Table of Contents

Index to Financial Statements

Our intrastate natural gas transportation pipelines are located in Texas and some are subject to regulation as common purchasers and as gas utilities by the Texas Railroad Commission, or TRRC. The TRRC's jurisdiction extends to both rates and pipeline safety. The rates we charge for transportation services are deemed just and reasonable under Texas law unless challenged in a complaint. Should a complaint be filed or should regulation become more active, our business may be adversely affected.

Other state and local regulations also affect our business. We are subject to ratable take and common purchaser statutes in Texas, Oklahoma and Louisiana, the states where we operate. Ratable take statutes generally require gatherers to take, without undue discrimination, natural gas production that may be tendered to the gatherer for handling. Similarly, common purchaser statutes generally require gatherers to purchase without undue discrimination as to source of supply or producer. These statutes have the effect of restricting our right as an owner of gathering facilities to decide with whom we contract to purchase or transport natural gas. Federal law leaves any economic regulation of natural gas gathering to the states, and some of the states in which we operate have adopted complaint-based or other limited economic regulation of natural gas gathering activities. States in which we operate that have adopted some form of complaint-based regulation, like Oklahoma and Texas, generally allow natural gas producers and shippers to file complaints with state regulators in an effort to resolve grievances relating to natural gas gathering rates and access.

The states in which we conduct operations administer federal pipeline safety standards under the Pipeline Safety Act of 1968, which requires certain pipelines to comply with safety standards in constructing and operating the pipelines, and subjects pipelines to regular inspections. Certain of our gathering facilities are exempt from the requirements of this Act. In respect to recent pipeline accidents in other parts of the country, Congress and the Department of Transportation have passed or are considering heightened pipeline safety requirements. See *Business Energy Transfer Company Regulation*.

Failure to comply with applicable regulations under the NGA, NGPA, Pipeline Safety Act and certain state laws can result in the imposition of administrative, civil and criminal remedies.

Our business involves hazardous substances and may be adversely affected by environmental regulation.

Many of the operations and activities of our gathering systems, plants and other facilities are subject to significant federal, state and local environmental laws and regulations. These include, for example, laws and regulations that impose obligations related to air emissions and discharge of wastes from our facilities and the cleanup of hazardous substances that may have been released at properties currently or previously owned or operated by us or locations to which we have sent wastes for disposal. Various governmental authorities have the power to enforce compliance with these regulations and the permits issued under them, and violators are subject to administrative, civil and criminal penalties, including civil fines, injunctions or both. Liability may be incurred without regard to fault for the remediation of contaminated areas. Private parties, including the owners of properties through which our gathering systems pass, may also have the right to pursue legal actions to enforce compliance as well as to seek damages for non-compliance with environmental laws and regulations or for personal injury or property damage.

There is inherent risk of the incurrence of environmental costs and liabilities in our business due to our handling of natural gas and other petroleum products, air emissions related to our operations, historical industry operations, waste disposal practices and the prior use of natural gas flow meters containing mercury. In addition, the possibility exists that stricter laws, regulations or enforcement policies could significantly increase

Table of Contents

Index to Financial Statements

our compliance costs and the cost of any remediation that may become necessary. We may incur material environmental costs and liabilities. Furthermore, our insurance may not provide sufficient coverage in the event an environmental claim is made against us.

Our business may be adversely affected by increased costs due to stricter pollution control requirements or liabilities resulting from non-compliance with required operating or other regulatory permits. New environmental regulations might adversely affect our products and activities, including gathering, compression, treating, processing and transportation, as well as waste management and air emissions. Federal and state agencies could also impose additional safety requirements, any of which could affect our profitability. See Business Energy Transfer Company Environmental Matters.

Our business involves many hazards and operational risks, some of which may not be fully covered by insurance.

Our operations are subject to the many hazards inherent in the gathering, compression, treating, processing and transportation of natural gas and NGLs, including:

damage to pipelines, related equipment and surrounding properties caused by hurricanes, tornadoes, floods, fires and other natural disasters and acts of terrorism;

inadvertent damage from construction and farm equipment;

leaks of natural gas, NGLs and other hydrocarbons; and

fires and explosions.

These risks could result in substantial losses due to personal injury and/or loss of life, severe damage to and destruction of property and equipment and pollution or other environmental damage and may result in curtailment or suspension of our related operations. Our operations are primarily concentrated in Texas, and a natural disaster or other hazard affecting this area could have a material adverse effect on our operations. We are not fully insured against all risks incident to our business. We do not have property insurance on all of our underground pipeline systems that would cover damage to the pipelines. We are not insured against all environmental accidents that might occur, other than those considered to be sudden and accidental. We have minimal business interruption insurance that covers the Oasis Pipeline. Under the terms of our general liability and workers compensation policies, claims of up to \$1 million are insured. We also have excess liability coverage for claims up to \$35 million per occurrence after the payment of a \$1 million deductible. If a significant accident or event occurs that is not fully insured, it could adversely affect our operations and financial condition.

Any reduction in the capacity of, or the allocations to, our shippers in interconnecting, third-party pipelines could cause a reduction of volumes transported in our pipelines, which would adversely affect our revenues and cash flow.

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

Users of our pipelines are dependent upon connections to third-party pipelines to receive and deliver natural gas and NGLs. Any reduction of capacities of these interconnecting pipelines due to testing, line repair, reduced operating pressures, or other causes could result in reduced volumes transported in our pipelines. Similarly, if

- 10 -

Table of Contents

Index to Financial Statements

additional shippers begin transporting volumes of natural gas and NGLs over interconnecting pipelines, the allocations to existing shippers in these pipelines would be reduced, which could also reduce volumes transported in our pipelines. Any reduction in volumes transported in our pipelines would adversely affect our revenues and cash flow.

We encounter competition from other midstream companies.

We experience competition in all of our markets. Our principal areas of competition include obtaining natural gas supplies for the Southeast Texas System and Elk City System and natural gas transportation customers for the Oasis Pipeline. Our competitors include major integrated oil companies, interstate and intrastate pipelines and companies that gather, compress, treat, process, transport and market natural gas. The Oasis Pipeline competes directly with two other major intrastate pipelines that link the Waha Hub and the Houston area, one of which is owned by Duke Energy Field Services, LLC and the other one of which is owned by El Paso Corporation and American Electric Power Service Corporation. The Southeast Texas System competes with natural gas gathering and processing systems owned by Duke Energy Field Services, LLC and Devon Energy Corporation. The Elk City System competes with natural gas gathering and processing systems owned by Enogex, Inc., Oneok Gas Gathering, L.L.C., CenterPoint Energy Field Services, Inc. and Enbridge Inc., as well as producer owned systems. Many of our competitors have greater financial resources and access to larger natural gas supplies than we do.

Expanding our business by constructing new pipelines and treating and processing facilities subjects us to construction risks.

One of the ways we may grow our business is through the construction of additions to our existing gathering, compression, treating, processing and transportation system. The construction of a new pipeline or the expansion of an existing pipeline, by adding additional horsepower or pump stations or by adding a second pipeline along an existing pipeline, and the construction of new processing or treating facilities, involve numerous regulatory, environmental, political and legal uncertainties beyond our control and require the expenditure of significant amounts of capital. If we undertake these projects, they may not be completed on schedule or at all or at the budgeted cost. Moreover, our revenues may not increase immediately upon the expenditure of funds on a particular project. For instance, if we build a new pipeline, the construction will occur over an extended period of time, and we will not receive any material increases in revenues until after completion of the project. Moreover, we may construct facilities to capture anticipated future growth in production in a region in which such growth does not materialize. As a result, new facilities may not be able to attract enough throughput to achieve our expected investment return, which could adversely affect our results of operations and financial condition.

We depend on Koch Hydrocarbons, L.P. to purchase and fractionate the NGLs produced at the Elk City processing plant.

All of the NGLs produced at the Elk City processing plant are transported by Koch Hydrocarbons and delivered for fractionation to Conway, Kansas. There are no other fractionation plants or other NGL markets connected to the Elk City processing plant. As a result, if Koch Hydrocarbons refuses or is unable to transport or fractionate these NGLs, our only alternative in the short term would be to transport NGLs by truck to another fractionation plant or another NGL market, which would likely result in additional costs and adversely affect our ability to market the NGLs.

Table of Contents

Index to Financial Statements

We are exposed to the credit risk of our customers, and an increase in the nonpayment and nonperformance by our customers could reduce our ability to make distributions to our unitholders.

Risks of nonpayment and nonperformance by our customers are a major concern in our business. Several participants in the energy industry have been receiving heightened scrutiny from the financial markets in light of the collapse of Enron Corp. We are subject to risks of loss resulting from nonpayment or nonperformance by our customers. Any increase in the nonpayment and nonperformance by our customers could reduce our ability to make distributions to our unitholders.

We may not be able to bypass the La Grange processing plant, which would expose us to the risk of unfavorable processing margins.

Because of our ownership of the Oasis Pipeline, we can generally elect to bypass the La Grange processing plant when processing margins are unfavorable and instead deliver pipeline-quality gas by blending rich gas from the Southeast Texas System with lean gas transported on the Oasis Pipeline. In some circumstances, such as when we do not have a sufficient amount of lean gas to blend with the volume of rich gas that we receive at the La Grange processing plant, we may have to process the rich gas. If we have to process when processing margins are unfavorable, our results of operations will be adversely affected.

We may not be able to retain existing customers or acquire new customers, which would reduce our revenues and limit our future profitability.

The renewal or replacement of existing contracts with our customers at rates sufficient to maintain current revenues and cash flows depends on a number of factors beyond our control, including competition from other pipelines, and the price of, and demand for, natural gas in the markets we serve.

For the 11 months ended August 31, 2003, approximately 23% of our sales of natural gas were to industrial end-users and utilities. As a consequence of the increase in competition in the industry and volatility of natural gas prices, end-users and utilities are increasingly reluctant to enter into long-term purchase contracts. Many end-users purchase natural gas from more than one natural gas company and have the ability to change providers at any time. Some of these end-users also have the ability to switch between gas and alternate fuels in response to relative price fluctuations in the market. Because there are numerous companies of greatly varying size and financial capacity that compete with us in the marketing of natural gas, we often compete in the end-user and utilities markets primarily on the basis of price. The inability of our management to renew or replace our current contracts as they expire and to respond appropriately to changing market conditions could have a negative effect on our profitability.

Energy Transfer Company has a limited operating history.

Energy Transfer Company acquired substantially all of its assets in October 2002 and December 2002 and has therefore only operated them together under common management for a limited period of time. Furthermore, the success of our business strategy related to our midstream and transportation business is dependent upon our operating these assets substantially differently from the manner in which Aquila Gas Pipeline operated them. As a result, our historical and pro forma financial information may not give you an accurate indication of what our actual results

would have been if we had completed the acquisitions at the

Table of Contents

Index to Financial Statements

beginning of the periods presented or our future results of operations. If we are unable to operate these assets in accordance with our business strategy, it will have a material adverse effect on our results of operations.

Risks Related to Our Propane Business

Since weather conditions may adversely affect demand for propane, our financial condition is vulnerable to warm winters.

Weather conditions have a significant impact on the demand for propane for both heating and agricultural purposes because many of our customers rely heavily on propane as a heating fuel. Typically, we sell approximately two-thirds of our retail propane volume during the peak-heating season of October through March. Our results of operations can be adversely affected by warmer winter weather which results in lower sales volumes. In addition, to the extent that warm weather or other factors adversely affect our operating and financial results, our access to capital and our acquisition activities may be limited. Variations in weather in one or more of the regions where we operate can significantly affect the total volume of propane that we sell and the profits realized on these sales. Agricultural demand for propane is also affected by weather during the harvest season as poor harvests or dry weather reduce demand for propane used in crop drying.

Sudden and sharp propane price increases that cannot be passed on to customers may adversely affect our profit margins.

The propane industry is a margin-based business in which gross profits depend on the excess of sales prices over supply costs. As a result, our profitability is sensitive to changes in energy prices, and in particular, changes in wholesale prices of propane. When there are sudden and sharp increases in the wholesale cost of propane, we may not be able to pass on these increases to our customers through retail or wholesale prices. Propane is a commodity and the price we pay for it can fluctuate significantly in response to changes in supply or other market conditions over which we have no control. In addition, the timing of cost pass-throughs can significantly affect margins. Sudden and extended wholesale price increases could reduce our gross profits and could, if continued over an extended period of time, reduce demand by encouraging our retail customers to conserve or convert to alternative energy sources.

Our results of operations and our ability to make distributions or pay interest or principal on debt securities could be negatively impacted by price and inventory risk and management of these risks.

We generally attempt to minimize our price and inventory risk by purchasing product on a short-term basis, under supply contracts that typically have a one-year term and at a price that fluctuates based on the prevailing market prices at major delivery points. In order to help ensure adequate supply sources are available during periods of high demand, we may purchase large volumes of propane during periods of low demand or low price, which generally occur during the summer months, for storage in our facilities, at major storage facilities or for future delivery. This strategy may not be effective in limiting our price and inventory risks if, for example, market, weather or other conditions prevent or allocate the delivery of physical product during periods of peak demand. If the market price falls below the price at which we made such purchases, it could adversely affect our profits.

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

Some of our propane sales are pursuant to commitments at fixed prices. To mitigate the price risk related to our anticipated sales volumes under the commitments, we may purchase and store physical product and/or enter

- 13 -

Table of Contents

Index to Financial Statements

into fixed price over-the-counter energy commodity forward contracts and options. Generally, over-the-counter energy commodity forward contracts have terms of less than one year. We enter into such contracts and exercise such options at volume levels that we believe are necessary to manage these commitments. The risk management of our inventory and contracts for the future purchase of product could impair our profitability if the customers do not fulfill their obligations.

We also engage in other trading activities, and may enter into other types of over-the-counter energy commodity forward contracts and options. These trading activities are based on our management's estimates of future events and prices and are intended to generate a profit. However, if those estimates are incorrect or other market events outside of our control occur, such activities could generate a loss in future periods and potentially impair our profitability.

We are dependent on our principal suppliers, which increases the risk of an interruption in supply.

During fiscal 2003, we purchased approximately 29% of our propane from Enterprise Products Operating L.P., approximately 13% of our propane from Dynegy Liquids Marketing and Trade and approximately 19% of our propane from MP Energy, the Canadian partnership in which we own a 60% interest. If supplies from these sources were interrupted, the cost of procuring replacement supplies and transporting those supplies from alternative locations might be materially higher and, at least on a short-term basis, margins could be adversely affected. Supply from Canada is subject to the additional risk of disruption associated with foreign trade such as trade restrictions, shipping delays and political, regulatory and economic instability.

Historically, a substantial portion of the propane we purchase has originated from one of the industry's major markets located in Mont Belvieu, Texas and has been shipped to us through major common carrier pipelines. Any significant interruption in the service at Mont Belvieu or other major market points, or on the common carrier pipelines we use would adversely affect our ability to obtain propane.

Because of the highly competitive nature of the retail propane business, we may not be able to maintain existing customers or acquire new customers, which would have an adverse impact on our operating results and financial condition.

We compete with a number of large national and regional propane companies, some of whom have greater financial resources than we do, and several thousand small independent propane companies. Because of the relatively low barriers to entry into the retail propane market, there is potential for small independent propane retailers, as well as other companies that may not be engaged in retail propane distribution, to compete with our retail outlets. As a result, we are always subject to the risk of additional competition in the future. Generally, warmer-than-normal weather further intensifies competition. Most of our propane retail branch locations compete with several other marketers or distributors in their service areas. The principal factors influencing competition with other retail marketers are:

price,

reliability and quality of service,

responsiveness to customer needs,

- 14 -

Table of Contents

Index to Financial Statements

safety concerns,

long-standing customer relationships,

the inconvenience of switching tanks and suppliers, and

the lack of growth in the industry.

We can make no assurances that we will be able to compete successfully on the basis of these factors.

Competition from alternative energy sources may cause us to lose customers, thereby reducing our revenues.

Competition from alternative energy sources has been increasing as a result of reduced regulation of many utilities. Propane is generally not competitive with natural gas in areas where natural gas pipelines already exist because natural gas is a less expensive source of energy than propane. The gradual expansion of natural gas distribution systems and the availability of natural gas in many areas that previously depended upon propane could cause us to lose customers, thereby reducing our revenues. Fuel oil also competes with propane and is generally less expensive than propane. In addition, the successful development and increasing usage of alternative energy sources could adversely affect our operations.

If we do not continue to make acquisitions on economically acceptable terms, our future financial performance will be limited.

The propane industry is not a growth industry in part because of increased competition from alternative energy sources. In addition, because of long-standing customer relationships that are typical in the retail propane industry, the inconvenience of switching tanks and suppliers, and propane's higher cost relative to other energy sources, such as natural gas, we may have difficulty in increasing our retail customer base except through acquisitions. Therefore, our ability to grow our propane business will depend primarily upon our ability to acquire other retail propane distributors. Any acquisition may involve one or more of the following risks, including:

an increase in our indebtedness, which may affect credit ratings and our ability to make distributions to unitholders;

the inability to integrate the operations of the acquired business into our existing operations and make cost-saving changes such that the acquisition will be accretive to earnings and distributions to unitholders;

the diversion of management's attention from other business concerns;

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

the assumption of unknown liabilities and/or the inability or failure of the sellers to indemnify us under the acquisition agreements;
and

greater-than-expected loss of customers or employees from the acquired business.

- 15 -

Table of Contents

Index to Financial Statements

Covenant restrictions in the debt agreements of Heritage Operating may limit its ability to incur indebtedness, grant liens and take other actions.

Heritage Operating is subject to restrictive covenants contained in its debt agreements. These debt agreements consist of a bank credit facility and the three note agreements with secured lenders. These covenants limit the ability of Heritage Operating to incur additional indebtedness, grant liens on our properties or assets, or make loans, advances, investments and engage in transactions with affiliates. In addition, these covenants require Heritage Operating to maintain ratios of consolidated funded indebtedness to consolidated EBITDA (as these terms are similarly defined in the debt agreements) of not more than 5.00 to 1 for the bank credit facility and not more than 5.25 to 1 for the note agreements and consolidated EBITDA to consolidated interest expense (as these terms are similarly defined in the debt agreements) of not less than 2.25 to 1.

We are subject to operating and litigation risks that could adversely affect our operating results.

Our operations are subject to all operating hazards and risks normally incidental to handling, storing and delivering combustible liquids like propane. As a result, we have been, and are likely to be, a defendant in various legal proceedings arising in the ordinary course of business. Our insurance may not be adequate to protect us from all material expenses related to potential future claims for personal injury and property damage and we may not be able to continue purchasing such levels of insurance at economical prices. In addition, the occurrence of a serious accident involving propane, whether or not we are involved, may have an adverse effect on the public's desire to use propane.

Energy efficiency and technological advances may affect the demand for propane and adversely affect our operating results.

The national trend toward increased conservation and technological advances, including installation of improved insulation and the development of more efficient furnaces and other heating devices, has decreased the demand for propane by retail customers. Stricter conservation measures in the future or technological advances in heating, conservation, energy generation or other devices could adversely affect our operations.

Due to our lack of asset diversification, adverse developments in our propane business would reduce our ability to make distributions to our unitholders.

Due to our lack of asset diversification, an adverse development in our propane business would have a significantly greater impact on our financial condition and results of operations than if we maintained more diverse assets.

Risks Inherent in an Investment in Us

Cash distributions are not guaranteed and may fluctuate with our performance and other external factors.

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

The amount of cash we can distribute on our common units or other partnership securities depends upon the amount of cash we generate from our operations. The amount of cash we generate from our operations will fluctuate from quarter to quarter and will depend upon, among other things:

the amount of natural gas transported on the Oasis Pipeline and in our gathering systems;

the level of throughput in our processing and treating operations;

- 16 -

Table of Contents

Index to Financial Statements

the fees we charge and the margins we realize for our services;

the price of natural gas;

the relationship between natural gas and NGL prices;

the weather in our operating areas;

the cost to us of the propane we buy for resale and the prices we receive for our propane;

the level of competition from other propane companies and other energy providers;

the level of our operating costs; and

prevailing economic conditions.

In addition, the actual amount of cash available for distribution will also depend on other factors, such as:

the level of capital expenditures we make;

the cost of acquisitions, if any;

our debt service requirements;

fluctuations in our working capital needs;

our ability to make working capital borrowings under our credit facilities to make distributions;

restrictions on distributions contained in our debt agreements; and

the amount, if any, of cash reserves established by the general partner in its discretion for the proper conduct of our business.

Because of all these factors, we cannot guarantee that we will have sufficient available cash to pay a specific level of cash distributions to our unitholders.

Furthermore, you should be aware that the amount of cash we have available for distribution depends primarily upon our cash flow, including cash flow from financial reserves and working capital borrowings, and is not solely a function of profitability, which will be affected by non-cash items. As a result, we may make cash distributions during periods when we record net losses and may not make cash distributions during periods when we record net income.

We may be unable to successfully integrate the operations of Energy Transfer Company with our operations and to realize all of the anticipated benefits of the acquisition of Energy Transfer Company.

Table of Contents

Index to Financial Statements

In January 2004, we completed a combination transaction with La Grange Acquisition, L.P. (a company that conducted its operations under the name Energy Transfer Company). This combination involves the integration of two companies in separate lines of business that previously have operated independently, which is a complex, costly and time-consuming process. Failure to successfully integrate these two companies may have a material adverse effect on our business, financial condition or results of operations. The difficulties of combining the companies include, among other things:

operating a significantly larger combined company and adding a new business segment, midstream operations, to our existing propane operations;

the necessity of coordinating geographically disparate organizations, systems and facilities;

integrating personnel with diverse business backgrounds and organizational cultures; and

consolidating corporate and administrative functions.

Combining the two companies is made particularly difficult by the large size of Energy Transfer Company as compared to Heritage Propane Partners, L.P. (our predecessor company). For example, Energy Transfer Company's pro forma revenues for the 12 months ended August 31, 2003 were approximately \$1.1 billion as compared to revenues of Heritage Propane Partners, L.P. of approximately \$571 million for the same period. Additionally, the two companies operate in distinct business segments that require different operating strategies and different managerial expertise. The management team of Heritage Propane Partners, L.P. does not have substantial experience operating in the midstream natural gas industry. Likewise, the management team of Energy Transfer Company does not have substantial experience operating in the propane industry. While we intend to operate each of these two business segments independently by management experienced in such segments, we cannot assure you that this approach will be successful.

The process of combining the two companies could cause an interruption of, or loss of momentum in, the activities of the combined company's business and the loss of key personnel. The diversion of management's attention and any delays or difficulties encountered in connection with the acquisition and the integration of the two companies could harm the business, results of operations, financial condition or prospects of the combined company after the acquisition. Furthermore, the integration of these two companies may not result in the realization of the full benefits anticipated by the companies to result from the acquisition.

As part of the Energy Transfer Transaction, La Grange Energy acquired our general partner and a large portion of our units. As a result, our management and business strategies changed substantially from our previous management and business strategies, which has an impact on an investment in our common units.

In connection with the Energy Transfer Transaction, La Grange Energy purchased all of the partnership interests of U.S. Propane, L.P., our general partner, and all of the member interests of U.S. Propane, L.L.C., the general partner of U.S. Propane, L.P. In addition, La Grange Energy now owns 41.6% of our common units (assuming the conversion of the class D units and special units into common units). As a result of La Grange Energy's purchase of our general partner, La Grange Energy has made various changes to our management structure. La Grange Energy was formed to invest in the midstream natural gas industry and is the current owner of Energy Transfer Company, a midstream natural gas business. As the owner of our general partner, La Grange Energy has significant influence over our business strategy. La Grange Energy and our new

Table of Contents

Index to Financial Statements

management team may have different business strategies and approaches to operating our partnership than the previous owners of our general partner and our previous management team. In particular, we expect that midstream acquisitions will be the primary focus of our acquisition strategy in the future. Failure to successfully implement these new business strategies and operating approaches may have a material adverse effect on our business, financial condition and results of operations.

We may sell additional limited partner interests, diluting existing interests of unitholders.

Our partnership agreement allows us to issue an unlimited number of additional limited partner interests, including securities senior to the common units, without the approval of the unitholders. The issuance of additional common units or other equity securities will have the following effects:

the proportionate ownership interest of our unitholders in us will decrease;

the amount of cash available for distribution on each common unit or partnership security may decrease;

the relative voting strength of each previously outstanding common unit may be diminished; and

the market price of the common units or partnership securities may decline.

La Grange Energy may sell units or other limited partner interests in the trading market, which could reduce the market price of unitholders' limited partner interests.

La Grange Energy owns approximately 4,419,177 common units, 7,721,542 class D units and 3,742,515 special units. Following the approval of our unitholders and other conditions, the class D units and special units will be converted into an equal number of common units. In the future, La Grange Energy may dispose of some or all of these units. If La Grange Energy were to dispose of a substantial portion of these units in the trading markets, it could reduce the market price of our outstanding common units. Our partnership agreement allows La Grange Energy to cause us to register for sale units held by La Grange Energy. These registration rights allow La Grange Energy to request registration of its common units, class D units and special units and to include any of those units in a registration of other securities by us.

Our debt agreements may limit our ability to make distributions to unitholders and our financial flexibility.

As of August 31, 2003, Heritage Operating had outstanding \$353.1 million in senior secured debt with insurance companies and \$51.4 million in secured debt under its bank credit facility. This leverage may adversely affect its ability to finance future operations and capital needs, limit its ability to pursue acquisitions and other business opportunities and make its results of operations more susceptible to adverse economic conditions. Heritage Operating may in the future incur additional debt to finance acquisitions or for general business purposes, which could result in a significant increase in its leverage. The payment of principal and interest on its debt will reduce the cash available to make distributions on the common units. We will not be able to make any distributions to our unitholders if there is or will be an event of default under

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

these debt agreements. The ability of Heritage Operating to make principal and interest payments depends on its future performance, which is subject to many factors, several of which will be outside its control. Heritage Operating has granted liens on substantially all of its personal property (other than vehicles) to secure its existing debt. If an event of default occurs, the secured lenders can foreclose on the collateral.

- 19 -

Table of Contents

Index to Financial Statements

The debt agreements of Heritage Operating contain provisions relating to changes in ownership and changes of our general partner. If these provisions are triggered, the outstanding debt under these agreements may become due. If that happens, we cannot guarantee that we would be able to pay the debt. The general partner and its partners are not prohibited from entering into a transaction that would trigger these change-in-ownership provisions. The notes and the bank credit facility also contain restrictive covenants that limit the ability of Heritage Operating to incur additional debt and to engage in certain transactions. The debt agreements contain covenants that require Heritage Operating to maintain ratios of consolidated funded indebtedness to consolidated EBITDA (as these terms are similarly defined in the debt agreements) of not more than 5.00 to 1 for the bank credit facility and not more than 5.25 to 1 for the note agreements and consolidated EBITDA to consolidated interest expense (as these terms are similarly defined in the debt agreements) of not less than 2.25 to 1. Other covenants also limit the ability of Heritage Operating to incur additional indebtedness, grant liens on its properties or assets, or make loans, advances, investments and engage in transactions with affiliates. These covenants could reduce its ability to capitalize on business opportunities as they arise. Any new indebtedness could be reasonably expected to have similar or greater restrictions.

Our ability to access the capital markets for future offerings may be limited by adverse market conditions resulting from, among other things, general economic conditions, contingencies and uncertainties that are difficult to predict and beyond our control. If we are unable to access the capital markets for future offerings, we might be forced to seek extensions for some of our short-term maturities or to refinance some of our debt obligations through bank credit, as opposed to long-term public or private debt securities or equity securities. The price and terms upon which we might receive such extensions or additional bank credit could be more onerous than those contained in our existing debt agreements. Any such arrangements could, in turn, increase the risk that our leverage may adversely affect our future financial and operating flexibility.

The general partner is not elected by the unitholders and cannot be removed without its consent.

Unlike the holders of common stock in a corporation, unitholders have only limited voting rights on matters affecting our business, and therefore limited ability to influence management's decisions regarding our business. Unitholders did not elect our general partner and will have no right to elect our general partner on an annual or other continuing basis. Although our general partner has a fiduciary duty to manage us in a manner beneficial to Energy Transfer Partners, L.P. and the unitholders, the directors of our general partner and its general partner, U.S. Propane, L.L.C., have a fiduciary duty to manage the general partner and its general partner in a manner beneficial to the owners of those entities.

Furthermore, if the unitholders are dissatisfied with the performance of our general partner, they will have little ability to remove our general partner. The general partner generally may not be removed except upon the vote of the holders of 66 2/3% of the outstanding units voting together as a single class, including units owned by the general partner and its affiliates. Because the general partner and its affiliates currently hold approximately 25.7% of all the units, with an additional 11.0% of units held by our officers and directors, it will be difficult to remove the general partner without the consent of the general partner and our affiliates.

Furthermore, unitholders' voting rights are further restricted by the partnership agreement provision providing that any units held by a person that owns 20% or more of any class of units then outstanding, other than the general partner and its affiliates, cannot be voted on any matter.

Table of Contents

Index to Financial Statements

The control of our general partner may be transferred to a third party without unitholder consent.

The general partner may transfer its general partner interest to a third party in a merger or in a sale of all or substantially all of its assets without the consent of the unitholders. Furthermore, there is no restriction in the partnership agreement on the ability of the general partner of our general partner from transferring its general partner interest in our general partner to a third party. Any new owner of the general partner would be in a position to replace the officers of the general partner with its own choices and to control the decisions taken by such officers.

Unitholders may be required to sell their units to the general partner at an undesirable time or price.

If at any time less than 20% of the outstanding units of any class are held by persons other than the general partner and its affiliates, the general partner will have the right to acquire all, but not less than all, of those units at a price no less than their then-current market price. As a consequence, a unitholder may be required to sell his common units at an undesirable time or price. The general partner may assign this purchase right to any of its affiliates or to us.

Cost reimbursements due our general partner may be substantial and reduce our ability to pay the distributions to unitholders.

Prior to making any distributions on the units, we will reimburse our general partner for all expenses it has incurred on our behalf. In addition, our general partner and its affiliates may provide us with services for which we will be charged reasonable fees as determined by the general partner. The reimbursement of these expenses and the payment of these fees could adversely affect our ability to make distributions to the unitholders. Our general partner has sole discretion to determine the amount of these expenses and fees.

Unitholders may have liability to repay distributions.

Under certain circumstances unitholders may have to repay us amounts wrongfully returned or distributed to them. Under Delaware law, we may not make a distribution to you if the distribution causes our liabilities to exceed the fair value of our assets. Liabilities to partners on account of their partnership interests and non-recourse liabilities are not counted for purposes of determining whether a distribution is permitted. Delaware law provides that a limited partner who receives such a distribution and knew at the time of the distribution that the distribution violated Delaware law will be liable to the limited partnership for the distribution amount for three years from the distribution date. Under Delaware law, an assignee who becomes a substituted limited partner of a limited partnership is liable for the obligations of the assignor to make contributions to the partnership. However, such an assignee is not obligated for liabilities unknown to him at the time he or she became a limited partner if the liabilities could not be determined from the partnership agreement.

Our partnership agreement limits our general partner's fiduciary duties to our unitholders and restricts the remedies available to unitholders for actions taken by our general partner that might otherwise constitute breaches of fiduciary duty.

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

Our partnership agreement contains provisions that waive or consent to conduct by our general partner and its affiliates that reduce the obligations to which our general partner would otherwise be held by state-law fiduciary duty standards. The following is a summary of the material restrictions contained in our partnership

- 21 -

Table of Contents

Index to Financial Statements

agreement on the fiduciary duties owed by our general partner to the limited partners. Our partnership agreement:

permits our general partner to make a number of decisions in its sole discretion. This entitles our general partner to consider only the interests and factors that it desires, and it has no duty or obligation to give any consideration to any interest of, or factors affecting, us, our affiliates or any limited partner;

provides that our general partner is entitled to make other decisions in its reasonable discretion ;

generally provides that affiliated transactions and resolutions of conflicts of interest not involving a required vote of unitholders must be fair and reasonable to us and that, in determining whether a transaction or resolution is fair and reasonable, our general partner may consider the interests of all parties involved, including its own. Unless our general partner has acted in bad faith, the action taken by our general partner shall not constitute a breach of its fiduciary duty; and

provides that our general partner and its officers and directors will not be liable for monetary damages to us, our limited partners or assignees for errors of judgment or for any acts or omissions if our general partner and those other persons acted in good faith.

In order to become a limited partner of our partnership, a common unitholder is required to agree to be bound by the provisions in the partnership agreement, including the provisions discussed above.

The general partner's absolute discretion in determining the level of cash reserves may adversely affect our ability to make cash distributions to our unitholders.

Our partnership agreement requires the general partner to deduct from operating surplus cash reserves that in its reasonable discretion are necessary to fund our future operating expenditures. In addition, the partnership agreement permits the general partner to reduce available cash by establishing cash reserves for the proper conduct of our business, to comply with applicable law or agreements to which we are a party or to provide funds for future distributions to partners. These cash reserves will affect the amount of cash available for distribution to unitholders.

Our general partner has conflicts of interest and limited fiduciary responsibilities, which may permit our general partner to favor its own interests to the detriment of unitholders.

Our general partner and its affiliates directly and indirectly own an aggregate limited partner interest of approximately 25.6% and our officers and directors own approximately 11.5% of the limited partner interests in us. Conflicts of interest could arise in the future as a result of relationships between our general partner and its affiliates, on the one hand, and us, on the other hand. As a result of these conflicts our general partner may favor its own interests and those of its affiliates over the interests of the unitholders. The nature of these conflicts includes the following considerations:

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

Remedies available to unitholders for actions that might, without the limitations, constitute breaches of fiduciary duty. Unitholders are deemed to have consented to some actions and conflicts of interest that might otherwise be deemed a breach of fiduciary or other duties under applicable state law.

- 22 -

Table of Contents

Index to Financial Statements

Our general partner is allowed to take into account the interests of parties in addition to us in resolving conflicts of interest, thereby limiting its fiduciary duties to the unitholders.

Our general partner's affiliates are not prohibited from engaging in other businesses or activities, including those in direct competition with us.

Our general partner determines the amount and timing of asset purchases and sales, capital expenditures, borrowings and reserves, each of which can affect the amount of cash that is distributed to unitholders.

Our general partner determines whether to issue additional units or other equity securities of us.

Our general partner determines which costs are reimbursable by us.

Our general partner controls the enforcement of obligations owed to us by it.

Our general partner decides whether to retain separate counsel, accountants or others to perform services for us.

Our general partner is not restricted from causing us to pay it or its affiliates for any services rendered on terms that are fair and reasonable to us or entering into additional contractual arrangements with any of these entities on our behalf.

In some instances our general partner may borrow funds in order to permit the payment of distributions, even if the purpose or effect of the borrowing is to make incentive distributions.

Tax Risks

For a general discussion of the expected federal income tax consequences of owning and disposing of common units, see **Material Tax Considerations**.

The IRS could treat us as a corporation for tax purposes, which would substantially reduce the cash available for distribution to unitholders.

The anticipated after-tax economic benefit of an investment in our common units depends largely on our being treated as a partnership for federal income tax purposes. We have not requested, and do not plan to request, a ruling from the IRS on this or any other matter affecting us.

If we were treated as a corporation for federal income tax purposes, we would pay federal income tax on our income at the corporate tax rate, which is currently a maximum of 35% and we would likely pay state taxes as well. Distributions to unitholders would generally be taxed again as corporate distributions, and none of our income, gains, losses or deductions would flow through to unitholders. Because a tax would be

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

imposed upon us as a corporation, our cash available for distribution to unitholders would be substantially reduced. Therefore, our treatment as a corporation would result in a material reduction in the after-tax return to the unitholders, likely causing a substantial reduction in the value of our common units.

- 23 -

Table of Contents

Index to Financial Statements

A change in current law or a change in our business could cause us to be treated as a corporation for federal income tax purposes or otherwise subject us to entity-level taxation. Our partnership agreement provides that, if a law is enacted or existing law is modified or interpreted in a manner that causes us to be treated as a corporation or otherwise subjects us to entity-level taxation for federal, state or local income tax purposes, then the minimum quarterly distribution and the target distribution levels will be adjusted to reflect that impact on us.

A successful IRS contest of the federal income tax positions we take may adversely affect the market for common units and the costs of any contest will be borne by our unitholders and our general partner.

We have not requested a ruling from the IRS with respect to any matter affecting us. The IRS may adopt positions that differ from the conclusions of our counsel expressed in this prospectus or from the positions we take. It may be necessary to resort to administrative or court proceedings to sustain our counsel's conclusions or the positions we take. A court may not concur with some or all of our counsel's conclusions or the positions we take. Any contest with the IRS may materially and adversely affect the market for our common units and the price at which they trade. In addition, the costs of any contest with the IRS, principally legal, accounting and related fees, will be indirectly borne by our unitholders and our general partner since such costs will reduce the amount of cash available for distribution.

Unitholders may be required to pay taxes on their share of our income even if they do not receive any cash distributions from us.

Unitholders will be required to pay federal income taxes and, in some cases, state and local income taxes on their share of our taxable income even if they do not receive any cash distributions from us. Unitholders may not receive cash distributions from us equal to their share of our taxable income or even equal to the actual tax liability that results from the taxation of their share of our taxable income.

Only calendar year taxpayers may become partners.

Only calendar year taxpayers may purchase common units. Any unitholder who is not a calendar year taxpayer will not be admitted to Energy Transfer Partners, L.P. as a partner, will not be entitled to receive distributions or federal income tax allocations from Energy Transfer Partners, L.P. and may only transfer these common units to a purchaser or other transferee.

Tax gain or loss on disposition of common units could be different than expected.

Unitholders who sell common units will recognize gain or loss equal to the difference between the amount realized and their tax basis in those common units. Prior distributions in excess of the total net taxable income allocated for a common unit that decreased a unitholder's tax basis in that common unit will, in effect, become taxable income to the unitholder if the common unit is sold at a price greater than the unitholder's tax basis in that common unit, even if the price is less than his original cost. A substantial portion of the amount the unitholder realizes, whether or not representing gain, will likely be ordinary income to the unitholder. Should the IRS successfully contest some positions we take, a unitholder could recognize more gain on the sale of common units than would be the case under those positions, without the benefit of decreased income in prior years. Also, unitholders who sell common units may incur a tax liability in excess of the amount of cash they receive from the sale.

Table of Contents

Index to Financial Statements

Tax-exempt entities, regulated investment companies and foreign persons face unique tax issues from owning common units which may result in adverse tax consequences to them.

Investment in common units by tax-exempt entities, including employee benefit plans and individual retirement accounts (known as IRAs), regulated investment companies (known as mutual funds) and non-U.S. persons raises issues unique to them. For example, virtually all of our income allocated to unitholders who are organizations exempt from federal income tax, may be unrelated business taxable income and will be taxable to them. Very little of our income will be qualifying income to a regulated investment company. Distributions to non-U.S. persons will be reduced by withholding taxes, at the highest applicable rate, and non-U.S. persons will be required to file federal income tax returns and generally pay tax on their share of our taxable income.

Our registration as a tax shelter may increase the risk of an IRS audit of us or a unitholder.

We are registered with the IRS as a tax shelter. Our tax shelter registration number is 96234000014. As a result, we may be audited by the IRS and tax adjustments could be made. Any unitholder owning less than a 1% profits interest in us has very limited rights to participate in the income tax audit process. Further, any adjustments in our tax returns will lead to adjustments in the unitholders' tax returns and may lead to audits of the unitholders' tax returns and adjustments of items unrelated to us. Unitholders will bear the cost of any expense incurred in connection with an examination of their personal tax returns and will indirectly bear a portion of the cost of an audit of us.

We will treat each purchaser of common units as having the same tax benefits without regard to the units purchased. The IRS may challenge this treatment, which could adversely affect the value of the units.

Because we cannot match transferors and transferees of common units, we will adopt depreciation and amortization positions that do not conform with all aspects of existing Treasury regulations. A successful IRS challenge to those positions could adversely affect the amount of tax benefits available to you. It also could affect the timing of these tax benefits or the amount of gain from the unitholder's sale of common units and could have a negative impact on the value of the common units or result in audit adjustments to the unitholder's tax returns. Please read [Material Tax Considerations](#), [Tax Consequences of Unit Ownership](#), [Section 754 Election](#) and [Uniformity of Units](#).

Unitholders likely will be subject to state and local taxes in states where they do not live as a result of an investment in the units.

In addition to federal income taxes, the unitholders may be subject to other taxes, including state and local taxes, unincorporated business taxes and estate, inheritance or intangible taxes that are imposed by the various jurisdictions in which we do business or own property now or in the future, even if they do not live in any of those jurisdictions. We presently conduct business in 29 states. In the future, we may acquire property or do business in other states or in foreign jurisdictions. Unitholders may be required to file state and local income tax returns and pay state and local income taxes in some or all of the jurisdictions. Further, unitholders may be subject to penalties for failure to comply with those requirements. It is the responsibility of each unitholder to file all federal, state and local tax returns. Our counsel has not rendered an opinion on the state or local tax consequences of an investment in us.

Risks Relating to the Debt Securities

References in these Risks Relating to the Debt Securities to we, us, and our means Energy Transfer Partners, L.P. and Heritage Operating, L.P.

Energy Transfer Partners, L.P. is a holding company and conducts its operations through its subsidiaries and depends on cash flow from its subsidiaries to service any of its debt obligations.

Energy Transfer Partners, L.P. conducts all of its operations through its subsidiaries and owns no significant assets other than the ownership interests in these subsidiaries. Therefore, the ability of Energy Transfer Partners, L.P. to make required payments on any debt securities it issues will depend on the performance of Heritage Operating, L.P. and its subsidiaries and their ability to distribute funds to Energy Transfer Partners, L.P. The ability of these subsidiaries to make such distributions may be restricted by, among other things, their debt agreements and applicable state partnership laws and other laws and regulations. Under Heritage Operating, L.P.'s debt agreements, Heritage Operating, L.P. is prohibited from making a distribution to us that would result in a default in its debt agreements. Heritage Operating, L.P. accounts for substantially all of our subsidiaries' outstanding indebtedness. Furthermore, applicable state partnership and limited liability company laws restrict our subsidiaries from making distributions to us that would result in their insolvency. Delaware corporate law also provides that Heritage Service Corp. may only declare dividends either out of its surplus or net profits. If Energy Transfer Partners, L.P. is unable to obtain the funds necessary to pay the principal amount at maturity of its debt securities, or to repurchase its debt securities upon the occurrence of a change of control, Energy Transfer Partners, L.P. may be required to adopt one or more alternatives, such as a refinancing of the debt securities. We cannot assure you that Energy Transfer Partners, L.P. would be able to so refinance its debt securities.

Your right to receive payments on the securities is unsecured and will be effectively subordinated to our existing and future secured indebtedness and to indebtedness of any of our subsidiaries who do not guarantee the securities.

Any debt securities, including any guarantees, issued by Energy Transfer Partners, L.P., Heritage Operating, L.P. or the Subsidiary Guarantors will be effectively subordinated to the claims of our secured creditors. In the event of the insolvency, bankruptcy, liquidation, reorganization, dissolution or winding up of the business of Energy Transfer Partners, L.P., Heritage Operating, L.P. or any Subsidiary Guarantors, their secured creditors would generally have the right to be paid in full before any distribution is made to the holders of the debt securities. Furthermore, if any of our subsidiaries do not guarantee the debt securities, the debt securities will be effectively subordinated to the claims of all creditors, including trade creditors and tort claimants, of those subsidiaries. In the event of the insolvency, bankruptcy, liquidation, reorganization, dissolution or winding up of the business of a subsidiary that is not a guarantor, creditors of that subsidiary would generally have the right to be paid in full before any distribution is made to the issuer of the debt securities or the holders of the debt securities. As of August 31, 2003, Energy Transfer Partners, L.P. had no outstanding indebtedness. Heritage Operating, L.P. had outstanding approximately \$404.2 million of secured indebtedness and approximately \$21.2 million of unsecured indebtedness. Our other subsidiaries had approximately \$300,000 of outstanding indebtedness, all of which is secured.

A subsidiary guarantee could be deemed to be a fraudulent conveyance under certain circumstances, and a court may try to subordinate or void the subsidiary guarantees.

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

Under federal bankruptcy laws and comparable provisions of state fraudulent transfer laws, a guarantee by a subsidiary could be voided, or claims in respect of a guarantee could be subordinated to all other debts of that

- 26 -

Table of Contents

Index to Financial Statements

guarantor if, among other things, the guarantor, at the time it incurred the indebtedness evidenced by its guarantee, received less than reasonably equivalent fair value or fair consideration for the incurrence of such guarantee, and

was insolvent or rendered insolvent by reason of such incurrence;

was engaged in a business or transaction for which the guarantor's remaining assets constituted unreasonably small capital; or

intended to incur, or believed that it would incur, debts beyond its ability to pay such debts as they mature.

In addition, any payment by that subsidiary guarantor pursuant to its guarantee could be voided and required to be returned to the guarantor, or to a fund for the benefit of the creditors of the guarantor. The measures of insolvency for purposes of these fraudulent transfer laws will vary depending upon the law applied in any proceeding to determine whether a fraudulent transfer has occurred. Generally, however, a guarantor would be considered insolvent if:

the sum of its assets, including contingent liabilities, were greater than the fair saleable value of all of its assets;

the present fair saleable value of its assets were less than the amount that would be required to pay its procurable liability, including contingent liabilities, on its existing debts, as they become absolute or mature; or

it could not pay its debts as they become due.

Energy Transfer Partners, L.P. and Heritage Operating, L.P. are required to distribute all of their available cash to their unitholders and are not required to accumulate cash for the purpose of meeting their future obligations to holders of their debt securities, which may limit the cash available to service those debt securities.

The partnership agreements of Energy Transfer Partners, L.P. and Heritage Operating, L.P. require us to distribute all of our available cash each fiscal quarter to our partners. Available cash is generally defined to mean all cash on hand at the end of the quarter, plus certain working capital borrowings after the end of the quarter, less reserves established by the general partner in its sole discretion to provide for the proper conduct of our business (including reserves for future capital expenditures), to comply with applicable law or agreements, including debt agreements, or to provide funds for future distributions to partners. Depending on the timing and amount of our cash distributions to unitholders and because we are not required to accumulate cash for the purpose of meeting obligations to holders of any debt securities, such distributions could significantly reduce the cash available to us in subsequent periods to make payments on any debt securities.

FORWARD-LOOKING STATEMENTS

Some of the information included in this prospectus, any prospectus supplement and the documents we incorporate by reference contain forward-looking statements. These statements discuss goals, intentions and expectations as to future trends, plans, events, results of operations or financial condition, or state other information relating to us, based on the current beliefs of our management as well as assumptions made by, and information currently available to, management. Words such as may, will, anticipate, believe, expect, estimate, intend, project and similar phrases or expressions identify forward-looking statements. When considering forward-looking statements, you should keep in mind the risk factors and other cautionary statements in this prospectus, any prospectus supplement and the documents we have incorporated by reference.

Although we believe these forward-looking statements to be reasonable, they are based upon a number of assumptions, any or all of which ultimately may prove to be inaccurate. These statements are subject to numerous assumptions, uncertainties and risks including, but not limited to, the following:

the general economic conditions in the United States of America as well as the general economic conditions and currencies in foreign countries;

the political and economic stability of petroleum producing nations;

the effect of weather conditions on demand for propane;

the effectiveness of risk-management policies and procedures and the ability of our liquids marketing counterparties to satisfy their financial commitments;

energy prices generally and specifically, and the price of natural gas, the price of NGLs and the price of propane to the consumer compared to the price of alternative and competing fuels;

the general level of petroleum product demand and the availability and price of propane supplies;

our ability to obtain adequate supplies of propane for retail sale in the event of an interruption in supply or transportation and the availability of capacity to transport propane to market areas;

hazards or operating risks incidental to transporting, storing and distributing propane that may not be fully covered by insurance;

the maturity of the propane industry and competition from other propane distributors;

energy efficiencies and technological trends;

loss of key personnel;

the availability and cost of capital and our ability to access certain capital sources;

changes in laws and regulations to which we are subject, including tax, environmental, transportation and employment regulations;

the costs and effects of legal and administrative proceedings; and

our ability to successfully identify and consummate strategic acquisitions at purchase prices that are accretive to our financial results.

- 28 -

Table of Contents

Index to Financial Statements

These factors are not necessarily all of the important factors that could cause actual results to differ materially from those expressed in any of our forward-looking statements. Our future results will depend upon various other risks and uncertainties, including, but not limited to, those detailed in our other filings with the SEC. For additional information, please read our other current filings with the SEC under the Exchange Act and the Securities Act. Other unknown or unpredictable factors also could have material adverse effects on our future results. You should not put undue reliance on any future-looking statements. When considering forward-looking statements, please review the risk factors described under Risk Factors beginning on page 3 of this prospectus.

USE OF PROCEEDS

Unless we specify otherwise in any prospectus supplement, we will use the net proceeds (after the payment of offering expenses and underwriting discounts and commissions) from the sale of securities for general partnership purposes, which may include, among other things:

paying or refinancing all or a portion of our indebtedness outstanding at the time; and

funding working capital, capital expenditures or acquisitions.

The actual application of proceeds from the sale of any particular offering of securities using this prospectus will be described in the applicable prospectus supplement relating to such offering. The precise amount and timing of the application of these proceeds will depend upon our funding requirements and the availability and cost of other funds.

We will not receive any of the proceeds from any sale of common units by the selling unitholders.

RATIO OF EARNINGS TO FIXED CHARGES

In August 2000, Heritage Propane Partners, L.P. acquired all of the propane operations of U.S. Propane, L.P., an entity that was formed when TECO Energy, Inc., AGL Resources, Inc., Piedmont Natural Gas Company, Inc., and Atmos Energy Corporation contributed each company's propane operations, Peoples Gas Company, AGL Propane, Inc., Piedmont Propane Company, and United Cities Propane Gas, Inc., respectively, to U.S. Propane, L.P. in exchange for equity interests in U.S. Propane, L.P. Simultaneously with the transaction, U.S. Propane, L.P. acquired all of the outstanding common stock of our former general partner, Heritage Holdings, Inc., thereby acquiring control of us. The transaction was accounted for as an acquisition using the purchase method of accounting with Peoples Gas Company being treated as the acquiror for accounting purposes as a result of Peoples Gas Company being the acquiror in the transaction that formed U.S. Propane, L.P. However, Heritage Propane Partners, L.P. is the surviving entity for legal purposes.

Because the fiscal year of Heritage Propane Partners, L.P. ended on August 31 and Peoples Gas Company had a fiscal year-end of December 31, the eight-month period ended August 31, 2000 was treated as a transition period under the rules of the Securities and Exchange Commission and is presented separately below. However, we continue to have an August 31 fiscal year-end.

Table of Contents

Index to Financial Statements

The table below sets forth the ratio of earnings to fixed charges of Heritage Propane Partners, L.P. and subsidiaries on a consolidated basis for the periods indicated. The ratio of earnings to fixed charges presented below for the years ending December 31, 1997, 1998 and 1999 includes information with respect to Heritage Propane Partners, L.P. (formerly Peoples Gas). The ratio of earnings to fixed charges presented below for the eight months ended August 31, 2000 includes information with respect to Heritage Propane Partners, L.P. (formerly Peoples Gas), and beginning August 10, 2000 the propane operations of U.S. Propane, L.P. and Heritage Propane Partners, L.P. (Predecessor Heritage).

On February 2004, Heritage Propane Partners, L.P. changed its name to Energy Transfer Partners, L.P.

Ratio of Earnings to Fixed Charges (formerly Peoples Gas):

	<u>Year Ended December 31,</u>			<u>Eight</u>	<u>Year Ended August 31,</u>		
	<u>1997</u>	<u>1998</u>	<u>1999</u>	<u>Months</u>	<u>2001</u>	<u>2002</u>	<u>2003</u>
				<u>Ended</u>			
				<u>August 31,</u>			
				<u>2000</u>			
<u>Ratio of Earnings to Fixed Charges</u>	76.38x	436.37x	242.25x	(A)	1.53x	1.12x	1.88x

(A) Earnings for the eight months ended August 31, 2000, were insufficient to cover fixed charges by \$3.5 million.

Table of Contents

Index to Financial Statements

The table below sets forth the ratio of earnings to fixed charges of Heritage Propane Partners, L.P. and subsidiaries (Predecessor Heritage) on a consolidated basis for the periods indicated and does not include information with respect to Peoples Gas or the propane operations of U.S. Propane, L.P. during those periods (which were prior to the acquisition of U.S. Propane, L.P., by Heritage Propane Partners, L.P.).

Ratio of Earnings to Fixed Charges (Predecessor Heritage):

	<u>Year Ended August 31,</u>		<u>Period Ended August 9,</u>
	<u>1998</u>	<u>1999</u>	<u>2000</u>
Ratio of Earnings to Fixed Charges	1.57x	1.58x	1.35x

For these ratios, earnings is the amount resulting from adding the following items:

pre-tax income from continuing operations, before minority interest and equity in earnings of affiliates;

distributed income of equity investees; and

fixed charges.

The term fixed charges means the sum of the following:

interest expensed;

amortized debt issuance costs; and

estimated interest element of rentals.

Index to Financial Statements

ENERGY TRANSFER TRANSACTION

On November 7, 2003, we publicly announced the signing of definitive agreements to combine our operations with those of La Grange Energy, L.P., a company engaged in the midstream natural gas business. La Grange Energy conducts its midstream operations through its subsidiary, La Grange Acquisition, L.P., under the name Energy Transfer Company. The assets of Energy Transfer Company are primarily located in major natural gas producing regions of Texas and Oklahoma. This transaction, which we refer to as the Energy Transfer Transaction, was completed in January 2004. The Energy Transfer Transaction created a combined entity with substantially greater scale and scope of operations. We believe our larger size and our entry into the midstream natural gas business will provide us with substantial internal and external growth opportunities and reduce the seasonality associated with our propane operations.

The value of this transaction was approximately \$1.0 billion based on the average market price of our common units for the three trading days prior to and the three trading days after the time we signed the agreements related to the transaction. At the closing of this transaction in January 2004, the following transactions occurred:

La Grange Energy contributed its interest in Energy Transfer Company and certain related assets to us in exchange for the following consideration:

An amount in cash equal to \$300 million, less the amount of Energy Transfer Company debt in excess of \$151.5 million, less accounts payable and other specified liabilities of Energy Transfer Company, plus an agreed upon amount for the reimbursement of capital expenditures paid by La Grange Energy relating to the Energy Transfer Company business prior to closing;

the retirement at closing of Energy Transfer Company's then outstanding debt;

the assumption at closing of Energy Transfer Company's then existing accounts payable and other specified liabilities;

4,419,177 of our common units and 7,721,542 class D units, representing a value of approximately \$433.9 million; and

3,742,515 special units, representing a value of approximately \$133.8 million.

La Grange Energy purchased all of the partnership interests of U.S. Propane, L.P., our general partner, and all of the member interests of U.S. Propane, L.L.C., the general partner of U.S. Propane, L.P., from the current owners for \$30 million in cash. La Grange Energy is owned by Natural Gas Partners VI, L.P., a private equity fund, Ray C. Davis, Kelcy L. Warren and a group of institutional investors.

We acquired from an affiliate of the then current owners of our general partner all of the stock of Heritage Holdings, Inc., which owned approximately 4.4 million of our common units, for \$50 million in cash and a \$50 million two-year promissory note secured by a pledge of the units held by Heritage Holdings, and we inherited approximately \$104.7 million in liabilities of Heritage

Edgar Filing: Energy Transfer Partners, L.P. - Form 424B3

Holdings. Substantially all of these liabilities are deferred tax liabilities arising from differences in the book and tax basis of Heritage Holdings' assets. The promissory note bears interest at a rate of 7% per annum.

We completed an offering of 8.0 million common units, resulting in proceeds, before expenses, of approximately \$292.5 million.

- 32 -

Table of Contents

Index to Financial Statements

The amounts necessary to pay the cash portion of the purchase price, retire the debt of Energy Transfer Company, satisfy the accounts payable and other specified liabilities of Energy Transfer Company and fund the expenses associated with the offering completed in January 2004, a new Energy Transfer Company credit facility arranged in January 2004 and the Energy Transfer Transaction were raised from the proceeds of the January 2004 offering and borrowings under the new Energy Transfer Company credit facility. The following table sets forth an estimated breakdown of the sources and uses of the consideration to be paid in this transaction:

	Amounts
	(In Millions)
Sources of Consideration:	
Gross proceeds from the January 2004 this common unit offering	\$ 309.5
Units issued to La Grange Energy(a)	567.7
Note payable to acquire Heritage Holdings	50.0
Borrowings under new Energy Transfer Company credit facility	275.0
General partner cash contributions to maintain its 2% general partner interest	14.6
	<u>1,216.8</u>
	<u>\$ 1,216.8</u>
Uses of Consideration:	
Cash payable to La Grange Energy(b)(c)	\$ 86.8
Estimated reimbursement of capital expenditures	5.0
Units issued to La Grange Energy(a)	567.7
Energy Transfer Company debt, including accrued interest, retired(b)(c)	227.0
Energy Transfer Company accounts payable and other specified liabilities assumed(b)(c)	137.2
	<u>1,023.7</u>
Energy Transfer Transaction consideration(a)	1,023.7
	<u>50.0</u>
Cash payable to acquire Heritage Holdings	50.0
Note payable to acquire Heritage Holdings	26.5
Transaction costs, including underwriting discount	66.6
Cash on the balance sheet	66.6
	<u>1,216.8</u>
	<u>\$ 1,216.8</u>

(a) For purposes of this table, the value attributable to the units issued to La Grange Energy is based on the average market price for our common units for the three trading days prior to and the three trading days after execution of the agreements relating to the Energy Transfer Transaction, which was \$35.74 per common unit. At the time these agreements were entered into, the parties determined the value of the units based on the prior 45 day average market price, which was \$33.40 per common unit, resulting in a value of \$987 million at such time for the Energy Transfer Transaction.

(b) Determined as of August 31, 2003.

(c) The cash payable to La Grange Energy, the Energy Transfer Company debt to be retired and the Energy Transfer Company accounts payable and other specified liabilities to be assumed will equal \$451.0 million in aggregate.

Table of Contents

Index to Financial Statements

Upon consummation of the Energy Transfer Transaction:

Energy Transfer Company became a wholly owned subsidiary of us.

There were approximately 26,722,234 common units and 7,721,542 class D units outstanding, of which 4,419,177 common units and all 7,721,542 class D units were owned by La Grange Energy. The class D units are similar to the common units and are entitled to the same cash distributions as common units, provided that the class D units' right to share in quarterly cash distributions and distributions on liquidation are subordinated to our common units' right to share in quarterly cash distributions and distributions on liquidation. The class D units will be converted into an equal number of common units following the approval by our unitholders of such conversion, and we will be obligated to seek this approval by our unitholders promptly after the closing of the Energy Transfer Transaction.

La Grange Energy also owns all 3,742,515 special units, a new class of our units that were issued in the Energy Transfer Transaction. The special units are non-voting and are not entitled to share in any partnership distributions. The special units will be converted into an equal number of common units following the occurrence of both: (1) the approval by our unitholders of such conversion and (2) the Bossier Pipeline becoming commercially operational, which we expect to occur by mid-2004. We will be obligated to seek this approval by our unitholders promptly after the closing of the Energy Transfer Transaction.

In connection with the Energy Transfer Transaction, Heritage Holdings became one of our wholly owned subsidiaries, and its 4,426,916 common units were converted into an equal number of class E units, a new class of our units. These class E units are the only outstanding class E units. These class E units are entitled to aggregate cash distributions equal to 11.1% of the total amount of cash distributed to all unitholders, including the class E unitholders, up to \$2.82 per unit per year.

There are 1,000,000 class C units outstanding. The class C units are entitled to receive any cash distributions to which the incentive distribution rights are entitled as a result of our receiving proceeds from outstanding litigation filed by us. The class C units are not entitled to any other distributions, do not generally have voting rights and are not convertible into any other class of units.

We do not include the class C units, class E units and special units in our pro forma per unit financial results included elsewhere in this prospectus. Please read "Description of Units" in this prospectus for a more complete discussion of the terms of our outstanding units.

Index to Financial Statements

ENERGY TRANSFER SELECTED HISTORICAL

FINANCIAL DATA

Although Heritage Propane Partners, L.P. was the surviving parent entity for legal purposes, Energy Transfer Company was the acquiror for accounting purposes. As a result, following the Energy Transfer Transaction, the historical financial statements of Energy Transfer Company for periods prior to the closing of the transaction became our historical financial statements. Energy Transfer Company was formed on October 1, 2002 and has an August 31 year-end. Energy Transfer Company's predecessor entities had a December 31 year-end. Accordingly, Energy Transfer Company's 11-month period ended August 31, 2003 is treated as a transition period.

Energy Transfer Company's historical financial information for the period from October 1, 2002 to August 31, 2003 has been derived from the historical financial statements of Energy Transfer Company included elsewhere in this prospectus. During this time period, Energy Transfer Company owned the Southeast Texas System and the Elk City System. From October 1, 2002 through December 27, 2002, Energy Transfer Company also owned a 50% equity interest in Oasis Pipe Line Company, which owns the Oasis Pipeline. After December 27, 2002, Energy Transfer Company owned a 100% interest in Oasis Pipe Line. In addition, on December 27, 2002, an affiliate of La Grange Energy's general partner contributed to Energy Transfer its marketing business and the Vantex System, the Rusk County Gathering System, the Whiskey Bay System and the Chalkley Transmission System.

Energy Transfer Company's historical financial information for periods prior to October 1, 2002 has been derived from the historical financial statements of Aquila Gas Pipeline. Prior to October 1, 2002, Aquila Gas Pipeline owned the Southeast Texas System, the Elk City System and a 50% equity interest in Oasis Pipe Line. All of these assets were acquired by Energy Transfer Company on October 1, 2002.

The financial information below for Aquila Gas Pipeline for the nine months ended September 30, 2002 and the years ended December 31, 2001 and 2000 and as of September 30, 2002 and December 31, 2001 has been derived from the audited consolidated financial statements of Aquila Gas Pipeline included elsewhere in this prospectus. The financial information below for Aquila Gas Pipeline for the years ended December 31, 1999 and 1998 and as of December 31, 2000, 1999 and 1998 has been derived from unaudited consolidated financial statements of Aquila Gas Pipeline, which are not included in this prospectus.

The selected historical financial data should be read in conjunction with the financial statements of Energy Transfer Company and Aquila Gas Pipeline included elsewhere in this prospectus and with Management's Discussion and Analysis of Financial Condition and Results of Operations included elsewhere in this prospectus.
