For the transition period from to

Commission file number 0-19882

KOPIN CORPORATION

(Exact Name of Registrant as Specified in its Charter)

Delaware	**04-2833935**
(State or other jurisdiction	**(I.R.S. Employer**
of incorporation or organization)	**Identification No.)**
200 John Hancock Rd., Taunton, MA	**02780-1042**
(Address of principal executive offices)	**(Zip Code)**

Registrant s telephone number, including area code: (508) 824-6696

Securities registered pursuant to Section 12(b) of the Act:	Common Stock, par value $.01 per share (Title of Class)
Name of Each Exchange on Which Registered	NASDAQ Global Market
Securities registered pursuant to Section 12(g) of the Act:	None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes ¨ No x

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes ¨ No x

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes x No ¨

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). ¨ Yes ¨ No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant s knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K. ¨

Indicate by check mark whether the Registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See definitions of large accelerated filer , accelerated filer and smaller reporting company in Rule 12b-2 of the Exchange Act. (Check one):

Large Accelerated Filer ¨	Accelerated Filer x	Non-Accelerated Filer ¨	Smaller Reporting Company ¨

Indicate by check mark whether the registrant is a shell company (as defined in rule 12b-2 of the Exchange Act). Yes ¨ No x

As of June 27, 2009 (the last business day of the most recent second fiscal quarter) the aggregate market value of outstanding shares of voting stock held by non-affiliates of the registrant was $233,254,014.

As of March 5, 2010, 66,613,853 shares of the registrant s Common Stock, par value $.01 per share, were issued and outstanding.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the registrant s definitive Proxy Statement relating to its 2010 Annual Meeting of Shareholders are incorporated by reference into Part III of this Annual Report on Form 10-K where indicated.

Part I

Forward Looking Statements

This Annual Report on Form 10-K contains forward-looking statements within the meaning of the United States Private Securities Litigation Reform Act of 1995, including, without limitation, statements made relating to our expectation that sales to Skyworks Solutions and the customers who use our displays for military applications will represent a significant portion of our revenues for 2010; our expectation that we will continue developing HBT transistor wafers and other gallium arsenide products for advanced integrated circuit applications from other compound materials; our expectation that we will continue to pursue other U.S. government development contracts for applications that relate to our commercial product applications; our expectation that sales of our III-V products for wireless handset applications and our display products for consumer electronic applications will decline; our belief that products using HBT transistor wafers are easier to design, which can translate into reduced component costs and smaller equipment; our expectation that we will prosecute and defend our proprietary technology aggressively; our belief that it is important to invest in research and development to remain profitable; our belief that we are a leading developer and manufacturer of advanced semiconductor materials and miniature displays; our belief that our products enable our customers to develop and market an improved generation of products; our belief that there will be increased sales of 3G and smart phones in 2010; our statement that we may make equity investments in companies engaged in certain aspects of display and electronics industries; our expectation that sales of our CyberDisplay products to customers who use them in digital still camera and camcorder applications will significantly decline; our expectation that KoBrite will incur additional losses in the near term; our belief that sales of our display products may decline such that Kowon may have a loss in 2010; our expectation that revenue will be between $120 million and $130 million for 2010; our expectation that 2010 revenues will primarily be to customers located in the U.S.; our belief that a strengthening of the U.S. dollar could increase the price of our products in foreign markets; our belief that interest income will decline in 2010; our expectation that we will not receive additional amounts from the sale of patents; our expectation to have federal and state tax liabilities in 2010; our expectation to have a state tax provision for financial reporting purposes in 2010; our expectation that our CyberDisplay products will benefit from further general technological advances in the design and production of integrated circuits and active matrix LCDs, resulting in further improvements in resolution and miniaturization; our expectation that a significant reduction or delay in orders from any of our significant military customers could result in us not being able to achieve profitability in 2010; our belief that our HBT transistor wafers offer greater power efficiency, improved signal quality and less complexity over gallium arsenide field effect transistors; our belief that our manufacturing process offers greater miniaturization, reduced cost, higher pixel density, full color capability and lower power consumption compared to conventional active matrix LCD manufacturing approaches; our expectation not to pay cash dividends for the foreseeable future and to retain earnings for the development of our businesses; our expectation, based on current negotiations with our customers and certain contractual obligations, that the sales prices of certain products will decline in fiscal year 2010; our expectation that sales prices of our displays for military applications will remain relatively flat in 2010 and sales prices of our III-V products will decline; our plan to obtain profitability in 2010 and beyond is to sell CyberDisplay products for use in higher margin military applications; our plan to base production and inventory levels based on internal forecasts of customer demands; our belief that the overall increase or decrease in the average sales price of our display products will be dependent on the sales mix of commercial and military display sales; our belief that we may have impairment charges on Kowon s long-lived assets; our expectation that we will expend between $6.0 and $10.0 million on capital expenditures over the next twelve months; our intent to reduce our per unit production costs primarily through increasing manufacturing yield, lowering fixed costs per unit through increased sales volume, and increasing productivity and efficiency; our plan to increase productivity and efficiency by migrating the CyberDisplay production line to 8 inch wafers, and migrating the III-V production to 6 inch wafers; our expectation that the market for display products for military applications will not be seasonal; our expectation that prices of our HBT transistor and display products sold for consumer electronic applications will decline by approximately 5 percent during fiscal year 2010, but may decline more depending on final negotiations with our customers; our expectation that competition will increase; our belief that our CyberDisplay products are well

suited for new applications such as reading e-mail and browsing the Internet using digital wireless devices and other consumer electronics devices; our belief that small form factor displays will be a critical component in the development of advanced wireless communications systems; our belief that general technological advances in the design and fabrication of integrated circuits, LCD technology and LCD manufacturing processes will allow us to continue to enhance our CyberDisplay product manufacturing process; our expectation that a significant market for new wireless communication devices, including personal entertainment systems, will develop; our expectation that our sales will be strongest in the third quarter followed by our second quarter then our fourth quarter and our first quarter; our belief that market risk associated with our international operations is unlikely to have a material adverse effect on our business, financial condition or results of operation; our belief that continued introduction of new products in our target markets is essential to our growth; our belief that our future success will depend primarily upon the technical expertise, creative skills and management abilities of our officers and key employees rather than on patent ownership; our expectation that market risk associated with our international operations is unlikely to have a material adverse effect on our business, financial condition or results of operation; our belief that our available cash resources will support our operations and capital needs for at least the next twelve months; and our belief that the effect, if any, of reasonably possible near-term changes in interest rates on our financial position, results of operations, and cash flows should not be material. These forward-looking statements are based on current expectations, estimates, forecasts and projections about the industries in which we operate, management s beliefs, and assumptions made by management. In addition, other written or oral statements, which constitute forward-looking statements, may be made by or on behalf of us. Words such as expects , anticipates , intends , plans , believes , could , seeks , estimates , and variations of such words and similar expressions are intended to identify such forward-looking statements. These statements are not guarantees of future performance and involve certain risks, uncertainties and assumptions, which are difficult to predict. Therefore, actual outcomes and results may differ materially from what is expressed or forecasted in such forward-looking statements, whether as a result of new information, future events or otherwise. Factors that could cause or contribute to such differences in outcomes and results include, but are not limited to, those discussed below in Item 1A and those set forth in our other periodic filings filed with the Securities and Exchange Commission.

Item 1. *Business*

Introduction

We were incorporated in Delaware in 1984 and are a leading developer and manufacturer of III-V products and miniature flat panel displays. We use our proprietary semiconductor material technology to design, manufacture and market our products. Our products enable our customers to develop and market an improved generation of products for applications in wireless and consumer electronic devices. In December 2004, we adopted a fiscal year ending on the last Saturday in December. The fiscal years ended December 26, 2009, December 27, 2008 and December 29, 2007 are referred to as fiscal years 2009, 2008 and 2007, respectively, herein. Our principal executive offices are located at 200 John Hancock Road, Taunton, Massachusetts. Our telephone number is (508) 824-6696.

We commercially develop and manufacture Gallium Arsenide-based heterojunction bipolar transistor wafers (HBT transistor wafers) and other commercial semiconductor products that use Gallium Nitride and Gallium Arsenide-based substrates. We collectively refer to our products based on compound semiconductor materials, which primarily consists of our HBT transistor wafers, as our III-V products because we use elements categorized on the III and V columns of the periodic table of elements to manufacture such products. Our HBT transistor wafers are customer-specific arrays of vertically oriented transistors that our customers use primarily to produce high performance integrated circuits for wireless communications products. Sales of our HBT transistor wafers to Skyworks Solutions, Inc. (Skyworks Solutions) accounted for approximately 20%, 20% and 26% of our total revenues for fiscal years 2009, 2008 and 2007, respectively. Skyworks Solutions also uses the foundry services of Advanced Wireless Semiconductor Company (AWSC) to process our HBT transistor wafers on its behalf. We sell HBT transistor wafers directly to AWSC for eventual resale by AWSC to Skyworks Solutions

and its other customers. Although we do not know exactly how much of our sales to AWSC are for Skyworks we believe an investor should view our sales to Skyworks Solutions and AWSC in the aggregate when evaluating the importance of Skyworks Solutions as a customer to Kopin. Sales to AWSC were 8%, 9% and 5%, of our 2009, 2008 and 2007 revenues, respectively. In addition to Skyworks Solutions, original equipment manufacturers such as RF Micro Devices and TriQuint Semiconductor purchase our HBT transistor wafers.

Our CyberDisplay products consist of miniature, high performance, high resolution displays either sold separately or in various configurations with optical lenses and electronics contained in either plastic or metal housings. Current applications which include our CyberDisplay products are military devices such as thermal weapon sights and consumer devices such as camcorders, digital cameras, and devices that are capable of browsing the Internet using digital wireless devices and viewing video from other consumer electronics devices such as MP3 or iPod storage devices. We have sold our CyberDisplay product to Samsung Electronics Co., Ltd. (Samsung) for use in digital camcorders, Eastman Kodak Company (Kodak), Olympus Corporation (Olympus) and Fuji Corporation (Fuji) for digital still cameras and DRS Technologies, BAE Systems (through a third party QiOptic), Raytheon and ITT for use in military applications. For fiscal years 2009, 2008 and 2007, significant display customers were as follows: (Note the caption Military Customers in Total in the table below includes Raytheon, DRS Technologies and QiOptic but excludes research and development contracts (* denotes that the customer s revenues were less than 10% of our total company revenues))

Customer	Percent of Total Revenues 2009	2008	2007
Military Customers in Total	45%	32%	16%
Raytheon Company	14%	*	*
DRS Technologies	19%	19%	*
QiOptic	*	*	*
Sanyo Electric Co. Ltd.	*	*	16%

Industry Overview

III-V Products

Advanced semiconductor materials are used in the manufacture of integrated circuits for high frequency, low power applications. The rapid growth in the wireless communications industry has fueled demand for these integrated circuits for use in wireless handsets.

In first generation wireless handsets, integrated circuits used in high frequency, low power amplifiers were generally constructed with silicon-based semiconductors. These integrated circuits, while relatively inexpensive to manufacture, were unable to deliver the ever increasing performance demanded by wireless handset manufacturers and their customers. This inability led to the development of gallium arsenide products for use in wireless communications. Gallium arsenide is generally regarded as having better performance characteristics than silicon due, in part, to its inherent physical properties that permit gallium arsenide integrated circuits to operate at much higher frequencies than silicon integrated circuits, or operate at the same frequency with lower power consumption. The reduction in system power requirements is particularly important in portable applications, such as wireless handsets, because it extends battery life.

The high performance characteristics of gallium arsenide have led to an increased use of gallium arsenide-based transistors to satisfy the industry s need for even greater performance. Since the mid 1990s these gallium arsenide transistors include our HBT transistor wafer for use in wireless handset products which use digital signal processing and generally operate at higher cellular frequencies. Air interface standards in these frequency bands include Global System Mobile, or GSM, Time Division Multiple Access, or TDMA, and Code Division Multiple Access, or CDMA, and provide improved capacity, sound quality and capabilities at cellular and wireless frequency bands, but are incompatible with each other and have fragmented the market for equipment. Suppliers

Table of Contents

of wireless handsets now offer multi-mode and multi-band wireless handsets which are capable of switching from one high frequency band to another to enable consumers to use wireless handsets across various territories and different interface standards. This new generation of products is significantly more complex than the prior generation and requires certain key features, including:

- Simpler system design;
- Support for higher frequencies;
- Lower power consumption;
- Improved signal quality; and
- Wider range of operating temperatures.

CyberDisplay Products

Small form factor displays are used in military, consumer electronic and industrial products such as thermal weapon sights, camcorders and digital cameras. We expect the market for wireless communications devices, including personal entertainment systems, will continue to grow. In order for this market to develop, advances in wireless communications systems such as greater bandwidth and increased functionality, including real-time wireless data, broadband Internet access and mobile television, will be necessary. In addition, economic models must be developed and implemented which compensate the owners of the media content. We believe small form factor displays will be a critical component in the development of advanced mobile wireless communications systems as these systems must provide high resolution images without compromising the portability of the product.

There are several display technologies currently available. The most commonly used technology in portable applications is based on the traditional liquid crystal display, or LCD, which is now in widespread use in products requiring a solid state monochrome or color display. These displays form an image by either transmitting or blocking light emitted from a source located behind the LCD. The principal LCD technologies are passive and active matrix.

- *Passive Matrix LCD.* These displays are primarily used in calculators, watches, pagers and wireless handsets because of their relatively low cost and low power consumption. Their relatively low image quality, slow response time and limited viewing angle, however, make them inadequate for many demanding applications.

- *Active Matrix LCD.* These displays are used primarily in laptop computers, instrumentation and projection systems. These displays are also being introduced on wireless handsets and storage devises such as Apple s iPods. In contrast to passive matrix LCDs, monochrome active matrix LCDs incorporate a transistor at every pixel location and color active matrix LCDs incorporate three transistors at every pixel location. This arrangement allows each pixel to be turned on and off independently which improves image quality and response time and also provides an improved side-to-side viewing angle of the display. The increased number of transistors required to produce those benefits, however, creates significant drawbacks, particularly in color applications. The high number of transistors used in conventional active matrix LCDs limits achievable pixel density and their relatively high power consumption makes them difficult to use in high information content ultra-portable electronics products.

We believe that the high growth potential for portable communications products can be realized effectively only if these products are available at a reasonable price and are able to clearly present to end users the information they wish to access without compromising the size of the product. These products, as well as future models of digital cameras and other consumer electronics, are well suited for the use of a miniature, low cost display with low power consumption and sharp monochrome or rich, full color high resolution images. To date, display technologies have not fully addressed these needs due to constraints with respect to size, power consumption, resolution, cost or full color capability.

Table of Contents

Our Solution

III-V Products

We manufacture our HBT transistor wafers using our proprietary metal organic chemical vapor deposition (MOCVD) semiconductor growth techniques and our Wafer Engineering process. Our Wafer Engineering process significantly reduces the number of defects which naturally occur when different semiconductor materials are combined. By depositing films of atomic-level thickness on gallium arsenide or indium phosphide wafers, we are able to create HBT transistor wafers that consist of a series of material layers which form a vertical transistor. This transistor structure enables the design of integrated circuits in which individual transistors are vertically arranged.

We believe that the vertical structure of an HBT transistor offers the following advantages to an integrated circuit manufacturer:

Smaller Size. We believe integrated circuits fabricated from our HBT transistor wafers can be made smaller than integrated circuits fabricated from gallium arsenide field effect transistors. Smaller size enables more die per wafer, which can increase manufacturing yields and lead to reduced costs.

Faster Circuits. We believe our HBT transistor wafers enable the design of faster integrated circuits than may be designed with gallium arsenide field effect transistors because the effective transistor gate length, or the distance an electron must travel within a transistor, is shorter. The transistor gate length of gallium arsenide field effect transistors is constrained by current optical lithography techniques to approximately 0.13 microns for commercial volumes. We currently manufacture our HBT transistor wafers in commercial volumes with an effective transistor gate length ranging from approximately 0.05 microns to 0.1 microns. We are able to achieve this result because the thickness of the vertical base layer of our HBT transistor wafers determines transistor gate length rather than the limitations of current optical lithography techniques.

We believe our HBT transistor wafers also offer the following additional advantages over gallium arsenide field effect transistors:

Greater Power Efficiency. Efficiency is a measure of power output as a percentage of battery power consumed by the device. We believe our HBT transistor wafers are more efficient and use less power to transmit the same output power than comparable gallium arsenide field effect transistors. Increased efficiency can translate into improved battery life and increased talk time.

Improved Signal Quality. Power amplifiers within wireless handsets are a key determinant of signal quality. We believe that power amplifiers based on our HBT transistor wafers can amplify signals with reduced distortion, providing increased signal quality. Improved signal quality is important for wireless networks that use digital air interface standards such as Time Division Multiple Access, or TDMA, and Code Division Multiple Access, or CDMA.

Less Complexity. Power amplifiers and other integrated circuits based on our HBT transistor wafers run on a single power supply voltage. In contrast, gallium arsenide field effect transistors generally require both a positive and negative power supply, which results in the need to include a negative voltage generator and other additional components or circuitry in the end product. As a result, we believe products using our HBT transistor wafers are easier to design, which can translate into reduced component costs and smaller equipment.

CyberDisplay Products

Our principal CyberDisplay products are miniature high density color or monochrome active matrix LCDs with resolutions which range from approximately 320 x 240 resolution to 1280 x 1024 resolution. In contrast to current passive matrix and active matrix LCD approaches, our CyberDisplay products utilize high quality, single

Table of Contents

crystal silicon the same high quality silicon used in conventional integrated circuits. This single crystal silicon is not grown on glass; rather, it is first formed on a silicon wafer and patterned into an integrated circuit (including the active matrix, driver circuitry and other logic circuits) in an integrated circuit foundry. The silicon wafer is then sent to our facilities and the integrated circuit is lifted off as a thin film and transferred to glass using our proprietary Wafer Engineering technology, so that the transferred layer is a fully functional active matrix integrated circuit.

Our proprietary technology enables the production of transparent circuits on a transparent substrate, in contrast to conventional silicon circuits, which are on an opaque substrate. Our CyberDisplay products imaging properties are a result of the formation of a liquid crystal layer between the active matrix integrated circuit glass and the transparent glass. We believe our manufacturing process offers several advantages over conventional active matrix LCD manufacturing approaches with regard to small form factor displays, including:

- Greater miniaturization;
- Higher pixel density;
- Full color capability; and
- Lower power consumption.

Our use of high quality single crystal silicon in the manufacture of our CyberDisplay products offers several performance advantages. The color CyberDisplay products we sell generate colors by using color filters with a white backlight. Color filter technology is a process in which display pixels are patterned with materials, which selectively absorb or transmit the red, green or blue colors of light. We previously developed, but did not commercialize, color CyberDisplays products using color sequential technology whereby a backlight composed of three LEDs emit a sequence of red, green and blue light. In color sequential technology, each pixel either blocks or transmits the colored light 180 times per second, which allows the generation of color images without using three separate pixels.

Our CyberDisplay products have the additional advantage of being fabricated using conventional silicon integrated circuit lithography processes. These processes enable the manufacture of miniature active matrix circuits, resulting in comparable or higher resolution displays relative to passive and other active matrix displays that are fabricated on glass. Our production partners, United Microelectronics Corporation, or UMC, and MagnaChip, fabricate integrated circuits for our CyberDisplay products in their foundries in Taiwan and Korea, respectively. The fabricated wafers are then returned to our facilities, where we lift the integrated circuits off the silicon wafers and transfer them to glass using our proprietary technology. The transferred integrated circuits are then processed and packaged with liquid crystal at our Westborough, Massachusetts facility. The packaged units are then assembled into display panels at our Westborough, Massachusetts facility, our Korean subsidiary, Kowon Technology Co., Ltd. (Kowon), or an Asian packaging company and shipped to customers. This arrangement allows us to benefit from UMC s and MagnaChip s economies of scale and advanced fabrication processes. We expect our CyberDisplay products will benefit from further general technological advances in the design and production of integrated circuits and active matrix LCDs, resulting in further improvements in resolution and miniaturization.

Strategy

Our objective is to be the leading supplier of advanced semiconductor materials and miniature displays that enable our customers to develop and manufacture differentiated communications, military and consumer electronic devices in high volumes. The critical elements of our strategy include:

- *Maintain Our Technological Leadership.* We believe our ability to develop innovative products based on our extensive materials science expertise enhances our opportunity to grow within our targeted markets. By continuing to invest in research and development, we are able to add to our expertise in the design of HBT transistor wafers, and innovative, high-resolution, miniature flat panel displays. We intend

to continue to focus our development efforts on our proprietary HBT transistor wafers and miniature displays.

Increase the Number of Product Designs That Use Our Components. Our goal is to grow sales of our components by increasing the number and type of products into which they are incorporated. Our product lines are subject to long design lead-times and we work closely with our customers to help them design and develop cost-effective products based on our III-V and CyberDisplay products. We use an aggressive pricing strategy as an inducement for manufacturers of consumer electronics and wireless communications products to integrate our products into their products.

Reduce Production Costs. We intend to reduce our per unit production costs primarily through increasing manufacturing yield, lowering fixed costs per unit through increased sales volume, and increasing productivity and efficiency. We plan to increase productivity and efficiency by migrating the CyberDisplay production line which uses 6 inch diameter wafers to a production line which uses 8 inch diameter wafers, and migrating the III-V production line from primarily production on 4 inch wafers to 6 inch wafers.

Leverage Integrated Circuit and Display Technologies and Infrastructure. We will continue to leverage our use of standard integrated circuit fabrication and LCD packaging technologies to achieve greater production capacity and to reduce capital investment and process development costs. Our use of these technologies allows us to engage third party manufacturers for certain portions of the fabrication of our CyberDisplay products and to take advantage of new technologies, cost-efficiencies and increased production capabilities of these third party manufacturers. We believe that general technological advances in the design and fabrication of integrated circuits, LCD technology and LCD manufacturing processes will allow us to continue to enhance our CyberDisplay product manufacturing process.

Markets and Customers

III-V Products

We develop and manufacture customer and application specific HBT transistor wafers for advanced integrated circuit applications. We believe we are one of the world s leading suppliers of HBT transistor wafers and currently support volume production of four-inch and six-inch HBT transistor wafers. Our primary HBT transistor wafer product is based on an aluminum gallium arsenide vertical layer structure. We also offer customers HBT transistor wafers based on indium gallium phosphide and gallium nitride vertical layer structures. We vary our manufacturing process to create customized HBT transistor wafer products for customers. For fiscal years 2009, 2008 and 2007, sales of III-V products accounted for 40%, 41% and 45% of our revenues, respectively.

Using our HBT transistor wafers, our customers have developed gallium arsenide power amplifiers for wireless handsets. Our HBT transistor wafers are used in Code Division Multiple Access, Global System Mobile and Time Division Multiple Access power amplifiers, and third generation (3G) wireless handset standards.

In addition to wireless handset power amplifiers, our HBT transistor wafers are also being used in the fabrication of power amplifiers for devices which communicate using wireless fidelity or WiFi integrated circuits. Our HBT transistor wafers are also used in high-speed fiber optic switching.

We design our HBT transistor wafers in collaboration with our customers engineering teams in order to create customized products that meet their specific application needs. Our largest customer for our HBT transistor wafers is Skyworks Solutions. Skyworks Solutions also uses the foundry services of Advanced Wireless Semiconductor Company (AWSC) to process our HBT transistor wafers on its behalf. We sell HBT transistor wafers directly to AWSC for eventual resale by AWSC to Skyworks Solutions and their other customers. Other customers of our gallium arsenide products include RF Micro Devices and TriQuint Semiconductor. For fiscal years 2009, 2008 and 2007, sales of gallium arsenide products to Skyworks Solutions

accounted for approximately 20%, 20%, and 26% of our total revenues, respectively. Sales to AWSC in 2009, 2008 and 2007 were 8%, 9% and 5% of our 2009, 2008 and 2007 revenues, respectively. Although we do not know exactly how much of our sales to AWSC are for products sold to Skyworks Solutions, we believe an investor should view our sales to Skyworks Solutions and AWSC in the aggregate for evaluating the importance of Skyworks Solutions as a customer to Kopin. We have a supply agreement with Skyworks Solutions which is scheduled to terminate on July 2010, excluding the agreement s last buy option.

CyberDisplay Products

We currently sell our CyberDisplay products to our customers as either a single display component, a unit which includes a lens and backlight (referred to as an electronic view finder or EVF), or a complete module, which includes the display, lens, backlight, focus mechanism and electronics, which are assembled in a plastic or metal housing (referred to as a binocular display module or BDM for commercial customers and higher level assemblies or HLA for military customers). Eyewear is the term we use to describe a device which is worn in a similar fashion as eye glasses to view images. Our customers either buy individual displays or a BDM from us to create an Eyewear product. We provide our CyberDisplay products to Samsung, Olympus, Fuji and Kodak for use in digital camcorders and cameras and to the U.S. military and certain foreign governments for use in military applications.

In order for our CyberDisplay products to function properly in their intended applications, integrated circuit chip sets generally are required. Several companies have designed integrated circuit chip sets to work with our CyberDisplay products and our customers can procure these chip sets directly from the manufacturer or through us.

For fiscal years 2009, 2008 and 2007, sales to military customers, excluding research and development contracts, as a percentage of total revenue were 45%, 32% and 16%, respectively.

For fiscal years 2009, 2008 and 2007, research and development revenues, primarily from multiple contracts with various U.S. governmental agencies, accounted for approximately 6%, 6% and 4%, respectively, of our total revenues.

For additional information with respect to our operating segments including sales and geographical information, see footnote 12 to our Financial Statements for the year ended December 26, 2009 included with this Form 10-K.

Sales and Marketing

We principally sell our III-V products directly to integrated circuit manufacturers in the United States and Asia. We sell our consumer electronic CyberDisplay products both directly and through distributors to original equipment manufacturers. We sell our military CyberDisplay products directly to prime contractors of the U.S. government or foreign governments. For both our III-V and CyberDisplay products we have a few customers who purchase in large volumes and many customers who buy in small volumes as part of their product development efforts. Large volume is a relative term. For consumer display customers purchases may be in the tens of thousands per week whereas military customers may purchase less than two thousand per month.

We believe that the technical nature of our products and markets demands a commitment to close relationships with our customers. Our sales and marketing staff, assisted by our technical staff and senior management, visit prospective and existing customers worldwide on a regular basis. We believe these contacts are vital to the development of a close, long-term working relationship with our customers, and in obtaining regular forecasts, market updates and information regarding technical and market trends. We also participate in industry specific trade shows and conferences.

Our design and engineering staff is actively involved with a customer during all phases of prototype design and production by providing engineering data, up-to-date product application notes, regular follow-up and technical assistance. In most cases, our technical staff works with each customer in the development stage to identify potential improvements to the design of the customer s product in parallel with the customer s effort. We have established a prototype product design group in Scotts Valley, California to assist our CyberDisplay customers with incorporating our products into their products and to accelerate their design process, achieving cost-effective and manufacturable products, and ensuring a smooth transition into high volume production. This group is also actively involved with research and development contracts for military applications.

Product Development

We believe that continued introduction of new products in our target markets is essential to our growth. Our commercial display products tend to have two or three year life cycles. We have assembled a group of highly skilled engineers who work internally as well as with our customers to continue our product development efforts. For fiscal years 2009, 2008 and 2007 we incurred total research and development expenses of $14.1 million, $16.0 million and $11.5 million, respectively. Research and development expenses, which primarily related to our internal development programs for new HBT and CyberDisplay products and development of the processes to manufacture CyberDisplay products using 8 inch wafers, were $10.6 million, $10.9 million and $8.3 million, respectively, for fiscal years 2009, 2008 and 2007.

III-V Products

We intend to continue developing HBT transistor wafers and other gallium arsenide products for advanced integrated circuit applications from other compound materials. We are working with current and potential customers in the development of the next generation of HBT transistor wafers, including developing GaN (Gallium Nitride) HEMT (high electron mobility transistor) wafers.

CyberDisplay Products

Our product development efforts are focused towards continually enhancing the features, functions and manufacturability of our CyberDisplay products. A principal focus of this effort is the improvement of manufacturing processes for very small active matrix pixels, which we will use in succeeding generations of our CyberDisplay products. The pixel size of our current CyberDisplay products ranges from 12 to 15 microns and we believe that we will be able to achieve a pixel size of less than 10 microns in commercial production. This pixel size is in contrast to a pixel size of approximately 100 microns in a typical laptop computer display. The resolution s of our current commercially available CyberDisplay products are 521 x 218 (dot), 800 x 225 (dot), 200 x 225 (pixel), 320 x 240 (pixel), 640 x 480 (pixel), 854 x 480 (pixel), 800 x 600 (pixel) and 1,280 x 1,024 (pixel). In addition, we have demonstrated 2,560 x 2,048 resolution CyberDisplay products in a 1.5 inch diagonal display. We are also working on further decreasing the power consumption of our CyberDisplay products. Additional display development efforts include expanding the resolutions offered, increasing the quantity of CyberDisplay s active matrix pixel arrays processed on each wafer by further reducing the display size, increasing the light throughput of our pixels, ,increasing manufacturing yields, increasing the functionality of our HLAs, and transitioning from our six inch CyberDisplay production line to an eight inch line.

Funded Research and Development

We have entered into various development contracts with agencies and prime contractors of the U.S. government. These contracts help support the continued development of our core technologies. We intend to continue to pursue U.S. government development contracts for applications that relate to our commercial and military product applications. Our contracts with U.S. government agencies and prime contractors to the U.S. government contain certain milestones relating to technology development and may be terminated by the government agencies prior to completion of funding. Our policy is to retain our proprietary rights with respect to

the principal commercial applications of our technology. To the extent technology development has been funded by a U.S. federal agency, under applicable U.S. federal laws the federal agency has the right to obtain a non-exclusive, non-transferable, irrevocable, fully paid license to practice or have practiced this technology for governmental use. Revenues attributable to research and development contracts for fiscal years 2009, 2008 and 2007 totaled $6.5 million, $7.2 million and $4.0 million, respectively.

Competition

III-V Products

With respect to our HBT transistor wafers, we presently compete with several companies, including IQE, Visual Photonics Epitaxy Co. Ltd. (VPEC), and Hitachi Cable, as well as integrated circuit manufacturers with in-house transistor growth capabilities, such as RF Micro Devices and Fujitsu. For our III-V products, pricing competition is intense. The production of gallium arsenide integrated circuits has been and continues to be more costly than the production of silicon integrated circuits. Although we have reduced production costs of our HBT transistor wafers by achieving higher volumes and reducing raw material costs, we cannot be certain we will be able to continue to decrease production costs. In addition, we believe the costs of producing gallium arsenide integrated circuits by our customers will continue to exceed the costs associated with the production of competing silicon integrated circuits. As a result, we must target markets where these higher costs are justified by their superior performance.

CyberDisplay Products

The commercial display market is highly competitive and is currently dominated by large Asian-based electronics companies including Sharp, Hitachi, Seiko, Toshiba, Sony, NEC and Sanyo. The display market consists of multiple segments, each focusing on different end-user applications applying different technologies. Competition in the display field is based on price and performance characteristics, product quality and the ability to deliver products in a timely fashion. The success of our display product offerings will also depend upon the adoption of our CyberDisplay products by consumers as an alternative to traditional active matrix LCDs and upon our ability to compete against other types of well-established display products and new emerging display products such as pico-projectors. Particularly significant is the consumer s willingness to use a near eye display device, a display viewed in a similar fashion as using a set of binoculars, as opposed to a direct view display which may be viewed from a distance of several inches to several feet. We cannot be certain that we will be able to compete against these companies and technologies or that the consumer will accept the use of such eyewear in general or our form factor specifically.

There are also a number of active matrix LCD and alternative display technologies in development and production. These technologies include reflective, field emission display, plasma, organic light emitting diode (OLEDs) and virtual retinal displays, some of which target the high performance small form factor display markets in which our military display products are sold. There are many large and small companies that manufacture or have in development products based on these technologies. Our CyberDisplay products will compete with other displays utilizing these and other competing display technologies.

Patents, Proprietary Rights and Licenses

An important part of our product development strategy is to seek, when appropriate, protection for our products and proprietary technology through the use of various United States and foreign patents and contractual arrangements. We intend to prosecute and defend our proprietary technology aggressively. Many of our United States patents and applications have counterpart foreign patents, foreign applications or international applications through the Patent Cooperation Treaty. In addition, we have licensed United States patents and some foreign counterparts to these United States patents from MIT.

The process of seeking patent protection can be time consuming and expensive and we cannot be certain that patents will be issued from currently pending or future applications or that our existing patents or any new patents that may be issued will be sufficient in scope or strength to provide meaningful protection or any commercial advantage to us. We may be subject to or may initiate interference proceedings in the United States Patent and Trademark Office, which can demand significant financial and management resources. Patent applications in the United States typically are maintained in secrecy until they are published eighteen months after their earliest claim to priority and since publication of discoveries in the scientific and patent literature lags behind actual discoveries, we cannot be certain that we were the first to conceive of inventions covered by pending patent applications or the first to file patent applications on such inventions. We cannot be certain that our pending patent applications or those of our licensors will result in issued patents or that any issued patents will afford protection against a competitor. In addition, we cannot be certain that others will not obtain patents that we would need to license, circumvent or cease manufacturing and sales of products covered by these patents, nor can we be sure that licenses, if needed, would be available to us on favorable terms, if at all.

We cannot be certain that foreign intellectual property laws will protect our intellectual property rights or that others will not independently develop similar products, duplicate our products or design around any patents issued to us. Our products might infringe the patent rights of others, whether existing now or in the future. For the same reasons, the products of others could infringe our patent rights. We may be notified, from time to time, that we could be or we are infringing certain patents and other intellectual property rights of others. Litigation, which could be very costly and lead to substantial diversion of our resources, even if the outcome is favorable, may be necessary to enforce our patents or other intellectual property rights or to defend us against claimed infringement of the rights of others. These problems can be particularly severe in foreign countries. In the event of an adverse ruling in litigation against us for patent infringement, we might be required to discontinue the use of certain processes, cease the manufacture, use and sale of infringing products, expend significant resources to develop non-infringing technology or obtain licenses to patents of third parties covering the infringing technology. We cannot be certain that licenses will be obtainable on acceptable terms, if at all, or that damages for infringement will not be assessed or that litigation will not occur. The failure to obtain necessary licenses or other rights or litigation arising out of any such claims could adversely affect our ability to conduct our business as we presently conduct it.

We also attempt to protect our proprietary information with contractual arrangements and under trade secret laws. We believe that our future success will depend primarily upon the technical expertise, creative skills and management abilities of our officers and key employees rather than on patent ownership. Our employees and consultants generally enter into agreements containing provisions with respect to confidentiality and employees generally assign rights to inventions made by them while in our employ. Agreements with consultants generally provide that rights to inventions made by them while consulting for us will be assigned to us unless the assignment of rights is prohibited by the terms of any agreements with their regular employers. Agreements with employees, consultants and collaborators contain provisions intended to further protect the confidentiality of our proprietary information. To date, we have had no experience in enforcing these agreements. We cannot be certain that these agreements will not be breached or that we would have adequate remedies for any breaches. Our trade secrets may not be secure from discovery or independent development by competitors.

Government Regulations

We are subject to a variety of federal, state and local governmental regulations related to the use, storage, discharge and disposal of toxic, volatile or otherwise hazardous chemicals used in our manufacturing process. The failure to comply with present or future regulations could result in fines being imposed on us, suspension of production or cessation of operations. Any failure on our part to control the use of, or adequately restrict the discharge of, hazardous substances, or otherwise comply with environmental regulations, could subject us to significant future liabilities. In addition, we cannot be certain that we have not in the past violated applicable laws or regulations, which violations could result in required remediation or other liabilities. We also cannot be certain that past use or disposal of environmentally sensitive materials in conformity with then existing

Table of Contents

environmental laws and regulations will protect us from required remediation or other liabilities under current or future environmental laws or regulations.

We are also subject to federal International Traffic in Arms Regulations (ITAR) laws which regulate the export of technical data and sale of products to other nations which may use these products for military purposes. The failure to comply with present or future regulations could result in fines being imposed on us, suspension of production, or a cessation of operations. Any failure on our part to control the use of, or adequately restrict the discharge of, hazardous substances, or otherwise comply with environmental regulations, could subject us to significant future liabilities. Any failure on our part to obtain any required licenses for the export of technical data and/or sales of our products or to otherwise comply with ITAR, could subject us to significant future liabilities. In addition, we cannot be certain that we have not in the past violated applicable laws or regulations, which violations could result in required remediation or other liabilities.

Investments in Related Businesses

We own 78% of Kowon Technology Co. LTD (Kowon) located in South Korea. Kowon performs several back-end packing steps on our commercial displays. We consolidate the financial statements of Kowon as part of our financial statements. Kowon s revenues are principally denominated in U.S. dollars and its local expenses are principally denominated in South Korean won. In addition, Kowon holds U.S. dollars to pay certain expenses including purchases from Kopin. Accordingly, Kowon s operations are subject to exchange rate fluctuations. Kowon is an integral part of our consumer CyberDisplay assembly process, performing the back-end packaging processes to complete the display.

On July 30, 2009, we purchased an additional 19,572,468 newly issued shares of Kopin Taiwan Corp (KTC) common stock for approximately $5,975,000 from KTC (the Transaction), in order to obtain a controlling interest. On August 11, 2009, we also purchased an additional 128,226 shares of KTC from Microelectronics Technology Inc. (MTI), for $300,000. As a result of these two transactions and our previous investments in KTC, we own approximately 87% of the now outstanding common stock of KTC. The remaining 13% is held by other investors and employees of KTC. Commencing in the third quarter of 2009 we consolidated the financial statements of KTC as part of our financial statements. Prior to the third quarter of 2009 we owned approximately 35% of KTC and accounted for our ownership interest in its results of operations under the equity method.

The total purchase price, excluding the shares purchased from MTI which were accounted for as described below, was $6,574,742, and is comprised of:

Cash consideration	$ 5,975,414
Fair market value of Kopin s previously held equity method investment in KTC	599,328
Total purchase price	$ 6,574,742

The allocation of the purchase price was as follows:

Cash and marketable securities	$ 6,251,087
Accounts receivable (net of allowance of $428,000)	1,671,298
Property, plant and equipment	3,429,339
Assets held for sale	1,564,037
Other identifiable assets	702,046
Identifiable liabilities	(5,988,414)
Noncontrolling interest in KTC	(1,054,651)
Total	$ 6,574,742

The assets held for sale is comprised of certain assets that KTC had previously agreed to sell to KoBrite.

We accounted for the additional 1% of KTC s equity acquired from MTI with the purchase of the 128,226 shares for $300,000 as an equity transaction. The carrying value of this additional 1% was approximately $40,000; accordingly the $260,000 difference between the carrying value of the additional 1% equity in KTC and the amount paid was recorded as additional equity of ours.

In 2008 we made loans to KTC totaling $2.0 million. For financial statement reporting purposes a portion of these loans were considered additional investment and were subject to equity accounting rules. Because of KTC s liquidity problems $0.8 million was written-off under the equity method and the balance of the loans of $1.2 million were written-off during the year ended December 27, 2008. During 2008 we also recorded a bad debt reserve for the excess of what KTC owed us net of what we owed KTC. Subsequent to our July 30, 2009 purchase of shares from KTC, KTC repaid the outstanding loan due to us from KTC that we had previously written-off.

The following is a summary of amounts of income (expense) related to KTC which are recorded in our statement of operations for the fiscal years indicated:

	2009	2008
Loan to KTC repaid (written-off)	$ 1,187,937	$ (1,187,937)
Equity losses	824,276	(824,276)
Reduction (increase) in bad debt allowance	506,762	(506,762)
Gain on remeasurement of Kopin s previous investment in KTC (A)	599,000	

(A) We previously recorded our investment in KTC under the equity method and had written down the investment to $0. We remeasured and wrote-up our investment in KTC by approximately $599,000 which represented the fair market value of the investment immediately prior to the Transaction.

One of our Directors is chairman of KTC and owns approximately 1% of the outstanding common stock of KTC. This director is also an employee and stock holder of MTI.

On October 3, 2008 all of the outstanding common stock and assets of Kenet were sold for approximately $21.6 million net of which $2.4 million was withheld in escrow subject to certain closing conditions (Net Proceeds). In conjunction with the transaction Kopin recorded a loss of $2.7 million in fiscal year 2008. The acquisition agreement also provides for former shareholders of Kenet to earn up to an additional $14.0 million based on the sales of Kenet products during the period from January 3, 2009 until July 3, 2010 (Contingent Consideration). No Contingent Consideration was earned during fiscal year 2009. We will record any additional amounts to be received from the escrow or Contingent Consideration when such amounts have been agreed to by the parties to the Kenet sale.

We have a 19% interest in KoBrite, and are accounting for our ownership interest using the equity method. For each of the fiscal years 2009, 2008 and 2007 we recorded equity losses from our investment in KoBrite of $0.3 million.

We may from time to time make further equity investments in these and other companies engaged in certain aspects of the display and electronics industries as part of our business strategy. These investments may not provide us with any financial return or other benefit and any losses by these companies or associated losses in our investments may negatively impact our operating results. Certain of our officers and directors have invested in some of the companies we have invested in.

Table of Contents

Employees

As of December 26, 2009, our consolidated business employed 334 full-time and 5 part-time individuals. Of these, 12 hold Ph.D. degrees in Material Science, Electrical Engineering or Physics. Our management and professional employees have significant prior experience in semiconductor materials, device transistor and display processing, manufacturing and other related technologies. None of our employees are covered by a collective bargaining agreement. We consider relations with our employees to be good.

Sources and Availability of Raw Materials and Components

We rely on third party independent contractors for certain integrated circuit chip sets and other critical raw materials such as special glasses and chemicals. In addition, our higher-level CyberDisplay assemblies, binocular display module, and other modules include lenses, backlights, printed circuit boards and other components, which we purchase from third party suppliers. Some of these third party contractors and suppliers are small companies with limited financial resources. In addition, relative to the commercial market, the military buys a small number of units which prevents us from qualifying and buying components economically from multiple vendors. As a result, we are highly dependent on a select number of third party contractors and suppliers.

Web Availability

We make available free of charge through our website, www.kopin.com, our annual reports on Form 10-K and other reports that we file with the Securities and Exchange Commission, as well as certain of our corporate governance policies, including the charters for the Board of Directors audit, compensation and nominating and corporate governance committees and its code of ethics, corporate governance guidelines and whistleblower policy. We will also provide to any person without charge, upon request, a copy of any of the foregoing materials. Any such request must be made in writing to us, c/o Investor Relations, Kopin Corporation, 200 John Hancock Road, Taunton, MA 02780.

Item 1A. ***Risk Factors***

The global economy in general and the United States economy specifically are experiencing a historic period of uncertainty and decline which could impact our financial results and stock price, among other things. The United States economy is experiencing severe liquidity issues, high levels of unemployment as compared to the recent past, and large federal budget deficits. These issues could have a severe adverse effect on our business and results of operation.

We have experienced a history of losses and have a significant accumulated deficit. Since inception, we have incurred significant net operating losses and have not achieved consistent annual profitability. As of December 26, 2009 we had an accumulated deficit of $136.5 million. We believe that our products are targeted towards markets that are still developing and our competitive strength is creating new technologies. Accordingly we believe it is important to continue to invest in research and development even during periods when we are not profitable. Our philosophy and strategies may result in our incurring losses from operations and negative cash flow.

Our revenues, profitability and cash flows could be negatively affected if sales of our CyberDisplay products for military applications significantly declined. A significant part of our fiscal year 2009 income from operations and our strategy to obtain profitability in fiscal year 2010 and beyond is to sell our CyberDisplay products for use in U.S. military applications because these products are sold with higher margins than our commercial display or III-V products. The U.S. federal government has incurred and is expected to continue to incur record federal budget deficits. Although we have been awarded programs to supply our display products for use in military applications these programs are subject to recurring funding by the U.S. government. The level of this funding may be affected by the federal budget deficits. If the U.S. government significantly reduces funding for these programs we will not be profitable.

Table of Contents

Our revenues, profitability and cash flows could be negatively affected if sales of smart phones and similar devices do not continue to grow. We sell our III-V products, primarily our Heterojunction Bipolar Transistor (HBT) wafers, to manufacturers of chip sets, such as Skyworks Solutions, who in turn sell the chip sets to wireless handset manufactures such as Nokia Corporation. The number of our products which ultimately end up in a wireless handset is dependent on the complexity of the wireless handset. For instance a 3G or smart phone typically contains more of our III-V products than a basic wireless handset. An important factor in our strategy to grow our III-V product sales is based on the premise that the sales of smart phones and similar devices will become an increasing percentage of the overall sales of wireless handsets. If the sale of wireless handsets is more skewed to basic units even though the number of wireless handsets may increase or the overall wireless handset market declines at a faster rate than the adoption of smart phones and similar devices, our sales may decline and our ability to be profitable and generate cash flow could be negatively impacted.

In addition, we receive information from our customers as to how much of our inventory they possess but we do not receive verifiable information as to how much of our customers inventory is in the possession of their customers. Accordingly, because of the unpredictability of what actual handset sales will be in 2010 and our lack of information as to how much inventory is in the supply chain our ability to estimate sales of our III-V products is very limited.

If we are unable to reduce the cost of our products our financial results could be negatively impacted. The sales prices of our commercial products and, to a lesser extent, our military products, have historically declined each year. Our strategy to maintain our gross margin is to improve manufacturing efficiencies and yields, increase production of larger diameter wafers (8-inch for display products and 6-inch for III-V products) and use our purchasing power to obtain reduced raw material and component pricing from our vendors. In 2009 we obtained an 87% interest in Kopin Taiwan Corporation (KTC) to increase our capacity to produce 6-inch HBT transistor wafers. In order to use KTC s production capacity KTC s production processes must be qualified by our customers. If we are unable to execute on our cost reduction strategies, in particular, our transition to larger diameter wafers and raw material purchasing strategy, our products may not be cost competitive with our competitors products which, may result in lower sales and reduced cash flow, and we may not be able to achieve profitability. Our purchasing power is predicated on the volumes of raw materials we buy which is directly related to our sales to certain significant customers.

Our revenue and cash flows could be negatively affected by the loss of any of the few customers who account for a substantial portion of our revenues. A few customers account for a substantial portion of our revenues. In addition sales of our CyberDisplay products for military applications is a significant factor in our profitability and future growth. The table below indicates, for the past three fiscal years, percentages of our total revenues from certain customers and for our sales for military applications. The symbol * indicates that sales to that particular customer for the given year were below 10 percent of our total revenues.

	Sales as a Percent of Total Revenue		
Customer	**2009**	**2008**	**2007**
Skyworks Solutions, Inc (A)	20%	20%	26%
Advanced Wireless Semiconductor Company	8	9	5
Military Customers (B)	45	32	16
United States Government Funded Research and Development Contracts	6	6	4
Raytheon Company (B)	14	*	*
DRS Technologies (B)	19	19	*
QiOptic (B)	*	*	*
Sanyo Electric Co. Ltd.	*	*	16

(A) In addition to its internal capacity Skyworks Solution, Inc. (Skyworks) also uses Advanced Wireless Semiconductor Company (AWSC) to perform processing. We sell our HBT wafers directly to AWSC for

use in Skyworks products as well as other customers. If we assume all of the HBT products we sold to AWSC were for Skyworks use the combined sales to Skyworks and AWSC would be 28%, 29% and 31% of or our revenues for the years ended 2009, 2008 and 2007, respectively.

(B) Sales to Raytheon Company, DRS Technologies and QiOptic are included within the Military Customers category. QiOptic is a third party who is manufacturing products on behalf of BAE Systems.

A significant reduction or delay in orders from any of our significant commercial customers would materially reduce our revenue and cash flow and adversely affect our ability to achieve or maintain profitability in the future. If we experience a significant reduction or delay in orders from any of our significant military customers our revenues and cash flow will be negatively impacted and we will not achieve profitability in 2010, unless the other military customers increased orders to sufficiently offset the decline. The sales to Skyworks Solutions and, to some extent, AWSC have been under a purchase and supply agreement with Skyworks Solutions which expires in July 2010. If we do not renew the agreement on commercially reasonable terms our revenue, cash flow and our ability to achieve or maintain profitability in the future would be adversely impacted.

We may not be able to increase our military production capacity. A critical part of our business strategy is to expand our military display production capacity and to implement a new manufacturing line which can utilize 8-inch wafers for our display production. Wafers with 8-inch diameters allow us to utilize more sophisticated manufacturing equipment and techniques which we believe is necessary to create smaller form factor, lower power, higher resolution displays. If we are unable to execute our military product display production facility plan, including the implementation of an 8-inch production line, or we can only manufacture and ship our CyberDisplay products in limited quantities, our revenues from CyberDisplay products may not grow, which may impact our ability to maintain profitability in the future.

Our ability to offer and manufacture higher level CyberDisplay assemblies and modules will impact our ability to increase revenues and achieve or maintain profitability. An important factor in our ability to expand into new military markets will be our ability to design and manufacture higher-level assemblies (HLAs). These HLAs typically consist of one or two CyberDisplay products, a backlight, lens and housing. Some HLAs also include a set of display driver electronics or a display driver chip. They are similar to our commercial binocular display modules, referred to as BDM products, but are much more complex with the additional design to operate in the extreme conditions of combat. Our goal is to deliver an integrated HLA to our customer which eases integration into their products. These products require more complex integration of a greater variety of components than we currently use for our existing display products. They will require us to invest in additional engineering, manufacturing and test capability. Accordingly, if we are unable to develop and market these new display products or if we are unable to manufacture them in a cost-effective manner, our revenues may not grow and we may not be able to maintain profitability.

Our ability to manufacture and distribute our CyberDisplay products would be severely limited if the third parties that we rely on to manufacture integrated circuits for our CyberDisplay products fail to provide those services. We depend on a Taiwanese company and a Korean company for the fabrication of integrated circuits for our CyberDisplay products. We have no long-term contracts with either of these two companies. These two companies use different methods to manufacture the integrated circuits and a shortage at one company cannot necessarily be supplied by the other company. One of the companies entered and exited bankruptcy in 2009. If either company were to terminate its arrangement with us or become unable to provide the required capacity and quality on a timely basis, we may not be able to manufacture and ship our CyberDisplay products or we may be able to manufacture them in limited quantities until replacement foundry services can be obtained. Furthermore, we cannot assure investors that we would be able to establish alternative manufacturing and packaging relationships on acceptable terms.

Our reliance on these foundries involves certain risks, including but not limited to:

- Lack of control over production capacity and delivery schedules;

Limited control over quality assurance, manufacturing yields and production costs;

The risks associated with international commerce, including unexpected changes in legal and regulatory requirements, changes in tariffs and trade policies and political and economic instability; and

Natural disasters such as earthquakes, tsunami, mudslides, drought, hurricanes and tornadoes.

Due to natural disasters such as earthquakes and typhoons that have occasionally occurred in Taiwan, many Taiwanese companies, including the Taiwanese foundry we use, have experienced related business interruptions. Our business could suffer significantly if either of the foundries we use had operations which were disrupted for an extended period of time, due to natural disaster, political unrest or financial instability. In addition, our CyberDisplays are manufactured on 6-inch silicon wafers and we are transitioning to 8-inch wafers. We currently do not anticipate redesigning all of our displays made on 6-inch wafers so they can be manufactured on 8-inch wafers. Our current military products are primarily manufactured on 6-inch wafers. We cannot be assured that if the 6-inch manufacturing facilities we use were damaged they would be restored or whether our foundry service providers may decide to discontinue the operation of their 6-inch manufacturing lines. If the 6-inch manufacturing lines were discontinued and the displays had to be redesigned we may need to have the displays re-qualified by our customers, which would adversely affect our business until such qualification is complete.

Our customers who purchase display products for military applications typically incorporate our products into their products which are sold to the U.S. government under contracts. U.S. government contracts generally are not fully funded at inception and may be terminated or modified prior to completion, which could adversely affect our business. Congress funds the vast majority of the federal budget on an annual basis, and Congress often does not provide agencies with all the money requested in their budget. Many of our customers contracts cover multiple years and, as such, are not fully funded at contract award. If Congress or a U.S. government agency chooses to spend money on other programs, our customer contracts may be terminated for convenience. Federal laws, collectively called the Anti-Deficiency Act, prohibit involving the government in any obligation to pay money before funds have been appropriated for that purpose, unless otherwise allowed by law. Therefore, the Anti-Deficiency Act indirectly regulates how the agency awards our contracts and pays our invoices.

Federal government contracts generally contain provisions, and are subject to laws and regulations, that provide the federal government rights and remedies not typically found in commercial contracts, including provisions permitting the federal government to, among other provisions: terminate our existing contracts; modify some of the terms and conditions in our existing contracts; subject the award to protest or challenge by competitors; suspend work under existing multiple year contracts and related delivery orders; and claim rights in technologies and systems invented, developed or produced by us.

The federal government may terminate a contract with us or our customer either for convenience (for instance, due to a change in its perceived needs) or if we default due to our failure or the failure of a subcontractor to perform under the contract. If the federal government terminates a contract with our customer our contract with our customers generally would entitle us to recover only our incurred or committed costs, settlement expenses and profit on the work completed prior to termination. However, under certain circumstances, our recovery costs upon termination for convenience of such a contract may be limited. As is common with government contractors, we have experienced occasional performance issues under some of our contracts. We may in the future receive show-cause or cure notices under contracts that, if not addressed to the federal government s satisfaction, could give the government the right to terminate those contracts for default or to cease procuring our services under those contracts.

In addition, U.S. government contracts and subcontracts typically involve long purchase and payment cycles, competitive bidding, qualification requirements, delays or changes in funding, extensive specification and performance requirements, price negotiations and milestone requirements. Each U.S. government agency often also maintains its own rules and regulations with which we must comply and which can vary significantly among agencies.

Most of our military sales are on a fixed-price basis, which could subject us to losses if there are cost overruns. Under a fixed-price contract, we receive only the amount indicated in the contract, regardless of the actual cost to produce the goods. While firm fixed-price contracts allow us to benefit from potential cost savings, they also expose us to the risk of cost overruns. If the initial estimates that we use to calculate the sales price and the cost to perform the work prove to be incorrect, we could incur losses. In addition, some of our contracts have specific provisions relating to cost, scheduling, and performance. If we fail to meet the terms specified in those contracts, then our cost to perform the work could increase, which would adversely affect our financial position and results of operations. Some of the contracts we bid on have Indefinite Delivery, Indefinite Quantity or IDIQ provisions. This means we are bidding a fixed price but are not assured of the quantity the government will buy or when it will buy during the term of the contract. This means we are exposed to the risk of price increases for labor, overhead and raw materials during the term of the contract. We may incur losses on fixed-price and IDIQ contracts that we had expected to be profitable, or such contracts may be less profitable than expected, which could have a material adverse effect on our business, financial condition, results of operations, and cash flows.

The eyewear market segment may not develop or may take longer to develop than we anticipate which will impact our ability to grow revenues. Eyewear is the term we use to describe a device which is worn in a similar fashion as eye glasses and contains one or two CyberDisplays for the viewing of video images. The source of these video images may be storage devices such as video iPods, DVD players or digital multimedia broadcasting (DMB) tuners. Currently the consumer may view the image through a direct view LCD display which may range in size from one to four inches diagonal. We believe that the consumer will find this experience unsatisfactory and we believe eyewear will be a preferred solution. We sell to commercial eyewear manufacturers individual components such as the display, backlight and integrated circuits, or a binocular display module (BDM), which contains the various components combined into one unit, or we sell a complete eyewear solution which contains the BDM and audio elements combined in a ready to use product. The eyewear manufacturing companies which are currently buying our displays for eyewear products tend to be small with limited financial resources and in-house engineering expertise. Because of our strategy to reduce our efforts to sell our display products for use in low end digital still camera and camcorder applications we believe that eyewear is a critical product for the long term revenue and cash flow growth of the CyberDisplay product line. If the eyewear market does not develop or we are unable to create and manufacture products which meet the needs of the eyewear market we may be unable to grow CyberDisplay product revenues and our ability to maintain profitability will be adversely affected.

The market segment for our Golden-i products may not develop or may take longer to develop than we anticipate which may impact our ability to grow revenues. Golden-i is a product platform which is targeted for industrial, military and prosumer markets. Golden-i is a combination of our display technologies with wireless and voice activated software technologies. We have demonstrated Golden-i products at various industry trade shows. However, we have not established definitive product introduction plans or manufacturing and sales strategies, The Golden-i products are significantly dependent on software which we have little experience in developing or selling. The Golden-i products are dependent on our ability to collaborate with software developers. If a market for Golden-i products does not develop or we are unable to create and manufacture Golden-i products we may be unable to grow CyberDisplay product revenues and our ability to maintain profitability may be adversely affected.

Our competitors can provide integrated solutions which could result in reduced market share or impact our ability to grow. Many portable consumer electronic devices, including camcorders and digital still cameras, have two displays for viewing images, an electronic viewfinder (EVF) and a flip-out or group view display. We only provide the display that is used as the electronic viewfinder. Our competitors may offer both EVF and flip-out displays and both displays may be run by the same interface electronics. A customer who buys our display is required to buy the flip-out display from another vendor who may compete with us. This may require our customer to purchase additional interface electronics to run our display. Our competitors may be able to offer a bundled solution of both displays and the interface electronics cheaper than the cost of buying our display and

the other display and the interface electronics separately. If we are unable to offer displays with sufficient performance advantages over other displays to justify the additional cost of buying individual components versus a bundled solution or if our customers can not procure cost efficient interface electronics to run our display products we may lose market share or be unable to grow our business which in turn would adversely affect our ability to maintain profitability.

Our CyberDisplay products may not be widely accepted by the market. Our success will in large part depend on the widespread adoption of the viewing format of our CyberDisplay products in multiple applications. Our success also depends upon the widespread consumer acceptance of our customers products. CyberDisplay products work best when used close to the eye, which may not be acceptable to consumers. In addition, CyberDisplay products are not designed for a shared experience amongst multiple viewers at the same time. Potential customers may be reluctant to adopt our CyberDisplay products because of concerns surrounding perceived risks relating to:

- The introduction of our display technology generally;
- Consumer acceptance of our CyberDisplay products; and
- The relative complexity, reliability, usefulness and cost-effectiveness of our display products compared to other display products available in the market or that may be developed by our competitors. In addition, our customers may be reluctant to rely upon a relatively small company like us for a critical component. We cannot assure investors that prospective customers will adopt our CyberDisplay products or that consumers will accept our CyberDisplay products in future applications. If we fail to achieve market acceptance of our CyberDisplay products, our business may not be successful and we may not be able to maintain profitability.

We depend on third parties to provide integrated circuit chip sets and other critical raw materials for use with our CyberDisplay products. We do not manufacture the integrated circuit chip sets necessary for use with our CyberDisplay products. Instead, we rely on third party independent contractors for these integrated circuit chip sets and other critical raw materials such as special glasses and chemicals. We also may use third parties to assemble our binocular display module (BDM). The critical raw materials, including the glasses and chemicals used in manufacturing the CyberDisplay products are used by other display manufacturers, many of which are much larger than Kopin. In addition, our higher-level CyberDisplay assemblies, BDMs, and other modules include lenses, backlights, printed circuit boards and other components, which we purchase from third party suppliers. Some of these third party contractors and suppliers are small companies with limited financial resources. In addition, relative to the commercial market, the military buys a small number of units which prevents us from qualifying and buying components economically from multiple vendors. If any of these third party contractors or suppliers were unable or unwilling to supply these integrated circuit chip sets or other critical raw materials to us, we would be unable to manufacture and sell our CyberDisplay products until a replacement supplier could be found. We cannot assure investors that a replacement third party contractor or supplier could be found on reasonable terms or in a timely manner. As recently as the third quarter of 2006, we have experienced situations when our vendors could not supply the quantity or quality of critical raw materials we needed. As a result, we were unable to meet customer demand and our revenues, manufacturing yield and gross margins were adversely affected. In addition, in 2008 and 2009 some of the vendors we use have experienced liquidity problems and have had difficulty obtaining inventory financing. Any interruption in our ability to manufacture and distribute our CyberDisplay products could cause our display business to be unsuccessful and the value of investors investment in us may decline.

We generally do not have long-term contracts with our CyberDisplay customers, which makes forecasting our revenues and operating results difficult. We generally do not enter into long-term agreements with our commercial CyberDisplay customers obligating them to purchase our products. Our business is characterized by short-term purchase orders and shipment schedules and we generally permit orders to be canceled or rescheduled before shipment without significant penalty. As a result, our customers may cease purchasing our products at any

Table of Contents

time, which makes forecasting our revenues difficult. In addition, due to the absence of substantial non-cancelable backlog, we typically plan our production and inventory levels based on internal forecasts of customer demand, which are highly unpredictable and can fluctuate substantially. Our operating results are difficult to forecast because we are continuing to invest in capital equipment and increasing our operating expenses for new product development. If we fail to accurately forecast our revenues and operating results, our business may not be successful and the value of investors investment in us may decline.

We may have to record additional impairment losses. In fiscal years 2009 and 2008 we recorded impairment charges totaling $0.9 million and $4.2 million, respectively, related to realized and unrealized losses on investments. In addition, our KoBrite joint venture has historically had losses from operations. If the equity and bond markets decline we may have to record additional losses. If the KoBrite joint venture generates operating losses in the future we will record additional losses, which will impact our ability to achieve or maintain profitability. In addition if KoBrite is unable to raise additional capital we may have to write-off our investment which will negatively impact our results of operations.

A disruption to our information technology systems could significantly impact our operations and impact our revenue and profitability. We maintain proprietary data processing systems and use customized software systems. We also use software packages which are no longer supported by their developer. An interruption to these systems for an extended period may impact our ability to operate the businesses and process transactions which could result in a decline in sales and affect our ability to achieve or maintain profitability.

Fluctuations in operating results make financial forecasting difficult and could adversely affect the price of our common stock. Our quarterly and annual revenues and operating results may fluctuate significantly for several reasons, including:

- The timing and successful introduction of additional manufacturing capacity;
- The timing of the initial selection of our III-V and CyberDisplay products as a component in our customers new products;
- Availability of interface electronics for our CyberDisplay;
- Competitive pressures on selling prices of our products;
- The timing and cancellation of customer orders;
- Our ability to introduce new products and technologies on a timely basis;
- Our ability to successfully reduce costs;
- The cancellation of U.S. government contracts; and
- Our ability to secure agreements from our major customers for the purchase of our products.

We typically plan our production and inventory levels based on internal forecasts of customer demand, which are highly unpredictable and can fluctuate substantially. Our operating results are difficult to forecast because we continue to invest in capital equipment and increase our operating expenses for new product development.

As a result of these and other factors, investors should not rely on our revenues and our operating results for any one quarter or year as an indication of our future revenues or operating results. If our quarterly revenues or results of operations fall below expectations of investors or

public market analysts, the price of our common stock could fall substantially.

If we fail to comply with complex procurement laws and regulations, we could lose business and be liable for various penalties or sanctions. We must comply with laws and regulations relating to the formation,

Table of Contents

administration and performance of federal government contracts. These laws and regulations affect how we conduct business with our federal government contracts. In complying with these laws and regulations, we may incur additional costs, and non-compliance may also allow for the assignment of fines and penalties, including contractual damages. Among the more significant laws and regulations affecting our business are the following:

- The Federal Acquisition Regulation, which comprehensively regulates the formation, administration and performance of federal government contracts;
- The Truth in Negotiations Act, which requires certification and disclosure of all cost and pricing data in connection with contract negotiations;
- The Cost Accounting Standards and Cost Principles, which impose accounting requirements that govern our right to reimbursement under certain cost-based federal government contracts; and
- Laws, regulations and executive orders restricting the use and dissemination of information classified for national security purposes and the export of certain products, services and technical data. We engage in international work falling under the jurisdiction of U.S. export control laws. Failure to comply with these control regimes can lead to severe penalties, both civil and criminal, and can include debarment from contracting with the U.S. government.

Our contracting agency customers may review our performance under and compliance with the terms of our federal government contracts. If a government review or investigation uncovers improper or illegal activities, we may be subject to civil or criminal penalties or administrative sanctions, including

- Termination of contracts;
- Forfeiture of profits;
- Cost associated with triggering of price reduction clauses;
- Suspension of payments;
- Fines; and
- Suspension or debarment from doing business with federal government agencies.

Additionally, the civil False Claims Act provides for potentially substantial civil penalties where, for example, a contractor presents a false or fraudulent claim to the government for payment or approval. Actions under the civil False Claims Act may be brought by the government or by other persons on behalf of the government (who may then share a portion of any recovery).

If we fail to comply with these laws and regulations, we may also suffer harm to our reputation, which could impair our ability to win awards of contracts in the future or receive renewals of existing contracts. If we are subject to civil and criminal penalties and administrative sanctions or suffer harm to our reputation, our current business, future prospects, financial condition, or operating results could be materially harmed.

The government may also revise its procurement practices or adopt new contracting rules and regulations, including cost accounting standards, at any time. Any new contracting methods could be costly to satisfy, be administratively difficult for us to implement and could impair our ability to obtain new contracts.

We may be unable to modify our products to meet regulatory or customer requirements. From time to time our products are subject to new domestic and international requirements such as the European Union s Restriction on Hazardous Substances (RoHS) Directive. If we are unable to comply with these regulations we may not be permitted to ship our products, which would adversely affect our revenue and ability to maintain profitability.

Increased competition may result in decreased demand or lower prices for our products. Competition in the markets for our products is intense and we may not be able to compete successfully. We compete with several companies, most of whom are much larger than us, who are primarily engaged in the business of designing, manufacturing and selling integrated circuits or alternative display technologies, as well as the supply of other discrete products. Our competitors could develop new process technologies that may be superior to ours, including technologies that target markets in which our products are sold. Many of our existing and potential competitors have strong market position, considerable internal manufacturing capacity, established intellectual property rights and substantial technological capabilities. Furthermore, they also have greater financial, technical, manufacturing, and marketing resources than we do, and we may not be able to compete successfully with them.

In addition, many of our existing and potential customers manufacture or assemble displays and wireless communications devices and have substantial in-house technological capabilities and substantially greater resources than we do. We may not be able to sell our products to these customers and they may commercialize their internal capabilities to become our competitors. If one of our large customers establishes internal design and manufacturing capabilities, it could have an adverse effect on our operating results.

We expect competition to increase. This could mean lower prices or reduced demand for our products. Any of these developments would have an adverse effect on our operating results.

Disruptions of our production of our III-V and CyberDisplay products would adversely affect our operating results. If we were to experience any significant disruption in the operation of our facilities, we would be unable to supply III-V and CyberDisplay products to our customers. Our manufacturing processes are highly complex and customer specifications are extremely precise. We periodically modify our processes in an effort to improve yields and product performance and to meet particular customer requirements. Although we have two domestic manufacturing facilities for our III-V products, only one of the facilities contains our quality control testing and inspection systems. Loss of this facility could prevent us from shipping product made at our other facility. Our third III-V production facility is located in Taiwan which periodically experiences earthquakes which may affect the ability of the facility to operate. Additionally, as we introduce new equipment into our manufacturing processes, our III-V and CyberDisplay products could be subject to especially wide variations in manufacturing yields and efficiency. We may experience manufacturing problems that would result in delays in product introduction and delivery or yield fluctuations. We are also subject to the risks associated with the shortage of raw materials used in the manufacture of our products.

If we fail to keep pace with changing technologies, we may lose customers. Rapidly changing customer requirements, evolving technologies and industry standards characterize the wireless communications, semiconductor materials and display industries. To achieve our goals, we need to enhance our existing products and develop and market new products that keep pace with continuing changes in industry standards, requirements and customer preferences. If we cannot keep pace with these changes, our business could suffer.

We may not be successful in protecting our intellectual property and proprietary rights. Our success depends in part on our ability to protect our intellectual property and proprietary rights. We have obtained certain domestic and foreign patents and we intend to continue to seek patents on our inventions when appropriate. We also attempt to protect our proprietary information with contractual arrangements and under trade secret laws. Our employees and consultants generally enter into agreements containing provisions with respect to confidentiality and the assignment of rights to inventions made by them while in our employ. These measures may not adequately protect our intellectual and proprietary rights. Existing trade secret, trademark and copyright laws afford only limited protection and our patents could be invalidated or circumvented. Moreover, the laws of certain foreign countries in which our products are or may be manufactured or sold may not fully protect our intellectual property rights. Misappropriation of our technology and the costs of defending our intellectual property rights from misappropriation could substantially impair our business. If we are unable to protect our intellectual property and proprietary rights, our business may not be successful and the value of investors investment in us may decline.

Our products could infringe on the intellectual property rights of others. Companies in the wireless communications, semiconductor and display industries steadfastly pursue and protect intellectual property rights. This has resulted in considerable and costly litigation to determine the validity of patents and claims by third parties of infringement of patents or other intellectual property. Our products could be found to infringe on the intellectual property rights of others. Other companies may hold or obtain patents or inventions or other proprietary rights in technology necessary for our business. Periodically companies inquire about our products and technology in their attempts to assess whether we violate their intellectual property rights. If we are forced to defend against infringement claims, we may face costly litigation, diversion of technical and management personnel, and product shipment delays, even if the allegations of infringement are unwarranted. If there is a successful claim of infringement against us and we are unable to develop non-infringing technology or license the infringed or similar technology on a timely basis, or if we are required to cease using one or more of our business or product names due to a successful trademark infringement claim against us, it could adversely affect our business.

Our business could suffer if we lose the services of, or fail to attract, key personnel. In order to continue to provide quality products in our rapidly changing business, we believe it is important to retain personnel with experience and expertise relevant to our business. Our success depends in large part upon a number of key management and technical employees. The loss of the services of one or more key employees, including Dr. John C.C. Fan, our President and Chief Executive Officer, could seriously impede our success. We do not maintain any key-man insurance policies on Dr. Fan or any other employees. In addition, due to the level of technical and marketing expertise necessary to support our existing and new customers, our success will depend upon our ability to attract and retain highly skilled management, technical, and sales and marketing personnel. Competition for highly skilled personnel is intense and there may be only a limited number of persons with the requisite skills to serve in these positions. If the III-V or CyberDisplay markets experience an upturn, we may need to increase our workforce. Due to the competitive nature of the labor markets in which we operate, we may be unsuccessful in attracting and retaining these personnel. Our inability to attract and retain key personnel could adversely affect our ability to develop and manufacture our products.

We may pursue acquisitions and investments that could adversely affect our business. In the past we have made, and in the future we may make, acquisitions of, and investments in, businesses, products and technologies that could complement or expand our business. If we identify an acquisition candidate, we may not be able to successfully negotiate or finance the acquisition or integrate the acquired businesses, products or technologies into our existing business and products. Future acquisitions could result in potentially dilutive issuances of equity securities, the incurrence of debt and contingent liabilities, amortization expenses and write-downs of acquired assets.

We may incur significant liabilities if we fail to comply with stringent environmental and the International Traffic in Arms Regulations or if we did not comply with these regulations in the past. We are subject to a variety of federal, state and local governmental regulations related to the use, storage, discharge and disposal of toxic or otherwise hazardous chemicals used in our manufacturing process. We are also subject to federal International Traffic in Arms Regulations (ITAR) laws which regulate the export of technical data and sale of products to other nations which may use these products for military purposes. The failure to comply with present or future regulations could result in fines being imposed on us, suspension of production, or a cessation of operations. Any failure on our part to control the use of, or adequately restrict the discharge of, hazardous substances, or otherwise comply with environmental regulations, could subject us to significant future liabilities. Any failure on our part to obtain any required licenses for the export of technical data and/or sales of our products or to otherwise comply with ITAR, could subject us to significant future liabilities. In addition, we cannot be certain that we have not in the past violated applicable laws or regulations, which violations could result in required remediation or other liabilities. We also cannot be certain that past use or disposal of environmentally sensitive materials in conformity with then existing environmental laws and regulations will protect us from required remediation or other liabilities under current or future environmental laws or regulations.

Investors should not expect to receive dividends from us. We have not paid cash dividends in the past nor do we expect to pay cash dividends for the foreseeable future. We anticipate that earnings, if any, will be retained for the development of our businesses.

Our stock price may be volatile in the future. The trading price of our common stock has been subject to wide fluctuations in response to quarter-to-quarter variations in results of operations, announcements of technological innovations or new products by us or our competitors, general conditions in the wireless communications, semiconductor and display markets, changes in earnings estimates by analysts or other events or factors. In addition, the public stock markets recently have experienced extreme price and trading volatility. This volatility has significantly affected the market prices of securities of many technology companies for reasons frequently unrelated to the operating performance of the specific companies. These broad market fluctuations may adversely affect the market price of our common stock.

Item 1B. ***Unresolved SEC Comments***

None.

Item 2. ***Properties***

We lease our domestic III-V product manufacturing facilities and corporate headquarters located in Taunton, Massachusetts. The Taunton facilities occupy 25,100 and 60,000 square feet, including 6,000 and 4,900 square feet of contiguous environmentally controlled production clean rooms. The Taunton facilities are occupied under leases that expire through 2020 and 2012.

We lease our 74,000 square foot CyberDisplay production facility in Westborough, Massachusetts, of which 10,000 square feet is contiguous environmentally controlled production clean rooms operated between Class 10 and Class 1,000 levels. The lease expires in March 2012. In addition to our Massachusetts facilities, we lease a 5,800 square foot design facility in Scotts Valley, California for developing prototypes of products incorporating our CyberDisplay product. This facility s lease expires in October 2012.

Our subsidiary, Kowon Technology Co., LTD, owns two facilities in Kyungii-Do, South Korea, in which it manufactures its products and in which its corporate headquarters are located. These facilities occupy an aggregate of 28,000 square feet. Our subsidiary, Kopin Taiwan Corp, owns a facility in Hsin Shu Science Park, Hsin Shu Taiwan, in which it manufactures its products and in which its corporate headquarters are located. This facility occupies 46,800 square feet.

Item 3. ***Legal Proceedings***

We are engaged in legal proceedings arising in the ordinary course of business. On August 14, 2009, a complaint was filed against us and certain of our officers and directors in Massachusetts Superior Court in Bristol County, asserting that the defendants breached fiduciary duties in connection with the issuance of proxy statements, which allegedly contained false and misleading statements concerning certain of our past stock option grants. We served the plaintiff a motion to dismiss on October 27, 2009, and we are in the process of selecting a date for oral argument in this matter. Claims, suits, investigations and proceedings are inherently uncertain and it is not possible to predict the ultimate outcome of the matters previously discussed. While we will continue to defend ourselves vigorously in all such matters, it is possible that our business, financial condition, results of operations or cash flows could be affected in any particular period by the resolution of one or more of these matters.

Item 4. ***Reserved***

Part II

Item 5. ***Market for Registrant s Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities***

Our common stock is traded on the NASDAQ Global Market under the symbol KOPN. The following table sets forth, for the quarters indicated, the range of high and low sale prices for the Company s common stock as reported on the NASDAQ Global Market for the periods indicated.

	High	Low
Fiscal Year Ended December 26, 2009		
First Quarter	$ 2.33	$ 1.47
Second Quarter	4.29	2.24
Third Quarter	4.92	3.15
Fourth Quarter	4.98	4.04
Fiscal Year Ended December 27, 2008		
First Quarter	$ 3.37	$ 1.97
Second Quarter	3.26	2.57
Third Quarter	3.45	2.45
Fourth Quarter	3.20	1.46

As of March 5, 2010, there were approximately 492 stockholders of record of our common stock, which does not reflect those shares held beneficially or those shares held in street name.

In the past three years we have not sold any securities which were not registered under the Securities Act.

We have not paid cash dividends in the past, nor do we expect to pay cash dividends for the foreseeable future. We anticipate that earnings, if any, will be retained for the development of our businesses.

Equity Compensation Plan Information

The following table sets forth information as of December 26, 2009 about shares of the Company s common stock issuable upon exercise of outstanding options, warrants and rights and available for issuance under our existing equity compensation plans.

Plan Category	Number of securities to be issued upon exercise of outstanding options, warrants and rights (a)	Weighted-average exercise price of outstanding options, warrants and rights (b)	Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in column (a)) (c)
Equity compensation plans approved by security holders(1)	3,660,334	$ 11.02	546,051(3)
Equity compensation plans not approved by security holders(2)	677,568	$ 8.61	246,038
Total	4,337,902	$ 10.90	792,089

(1) Consists of the 1992 Stock Option Plan and 2001 Equity Incentive Plan.

(2) Consists solely of the 2001 Supplemental Equity Incentive Plan, which does not require the approval of, and has not been approved by, our stockholders. Non-qualified options were issued under such plan. See Footnote 5 of the financial statements for additional description of the 2001 Supplemental Equity Incentive Plan.

(3) Options available under the 2001 Equity Incentive Plan.

Company Stock Performance

The following graph shows a five-year comparison of cumulative total shareholder return for the Company, the NASDAQ Stock Market and the S&P 500 Information Technology index. The graph assumes $100 was invested in each of the Company s common stock, the NASDAQ Stock Market and the S&P 500 Information Technology index on December 31, 2004. Data points on the graph are annual. Note that historical price performance is not necessarily indicative of future performance.

Kopin Corporation

S&P 500 Information Technology Index

Nasdaq Stock Market - U.S. Index

The following table provides information regarding repurchases of common stock made by us during the fiscal quarter ended December 26, 2009:

Period	Total number of Shares Purchased (a)	Average Price Paid per Share (b)	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs (c)	Maximum Approximate Dollar of Shares that May Yet Be Purchased Under the Plans or Programs (d)
September 26, 2009 through October 31, 2009		$		$
November 1, 2009 through November 28, 2009		$		$
November 29, 2009 through December 26, 2009(1)	193,000	$ 3.55		$
Total	193,000	$ 3.55		

(1) Amount represents shares of our common stock repurchased from employees in connection with the satisfaction of tax withholding obligations under restricted stock agreements between Kopin and certain of its key employees.

Basic	$ 0.29	$ 0.04	$ (0.10)	$ (0.03)	$ 0.15
Diluted	$ 0.29	$ 0.04	$ (0.10)	$ (0.03)	$ 0.15
Weighted average number of common shares outstanding:					
Basic	66,850	67,876	67,544	68,064	69,334
Diluted	67,458	68,164	67,544	68,064	69,879

	Fiscal Year Ended				
	2009	**2008**	**2007**	**2006**	**2005**
Balance Sheet Data:					
Cash and cash equivalents and marketable debt securities	114,547	100,016	93,304	105,360	119,757
Working capital	134,198	116,841	107,931	116,119	128,950
Total assets	183,224	159,677	161,054	161,413	166,334
Long-term obligations	903	867	806	772	740
Total stockholders equity	164,302	141,394	141,034	145,423	150,798

(1) The Company recorded a $0.5 million impairment charge in fiscal year 2005 as a result of its discontinuance of CyberLite LED manufacturing and development activities.

(2) The Company adopted an accounting standard that required the Company to record a liability for asset retirement obligations in 2005.

Item 7. ***Management s Discussion and Analysis of Financial Condition and Results of Operations***

The following discussion should be read in conjunction with our consolidated financial statements and notes to those statements and other financial information appearing elsewhere in this Form 10-K. The following discussion contains forward looking information that involves risks and uncertainties. Our actual results could differ materially from those anticipated in the forward looking statements as a result of a number of factors, including the risks discussed in Item 1A. Risk Factors , and elsewhere in this Annual Report on Form 10-K.

Management s discussion and analysis of our financial condition and results of operations are based upon our audited consolidated financial statements. The preparation of these financial statements requires us to make estimates and judgments that affect the reported amount of assets, liabilities, revenues and expenses and related disclosure of contingent assets and liabilities. On an on-going basis, we evaluate our estimates, including those related to revenue recognition under the percentage-of-completion method, bad debts, inventories, warranty reserves, investment valuations, valuation of stock compensation awards, recoverability of deferred tax assets, liabilities for uncertain tax positions and contingencies. We base our estimates on historical experience and on various other assumptions that are believed to be reasonable under the circumstances, the results of which form the basis for making judgments about carrying values of assets and liabilities that are not apparent from other sources. Actual results may differ from these estimates under different assumptions.

We believe the following critical accounting policies are most affected by our more significant judgments and estimates used in the preparation of our consolidated financial statements:

Revenue Recognition

We recognize revenue if four basic criteria have been met: (1) persuasive evidence of an arrangement exists; (2) delivery has occurred and services rendered; (3) the price to the buyer is fixed or determinable; and (4) collectability is reasonably assured. We do not recognize revenue for products prior to customer acceptance unless we believe the product meets all customer specifications and has a history of consistently achieving customer acceptance of the product. Provisions for product returns and allowances are recorded in the same period as the related revenues. We analyze historical returns, current economic trends and changes in customer demand and acceptance of product when evaluating the adequacy of sales returns and other allowances. Certain product sales are made to distributors under agreements allowing for a limited right of return on unsold products. Sales to distributors are primarily made for sales to the distributors customers and not for stocking of inventory. We delay revenue recognition for our estimate of distributor claims of right of return on unsold products based upon our historical experience with our products and specific analysis of amounts subject to return based upon discussions with our distributors or their customers.

We recognize revenues from long-term research and development contracts on the percentage-of-completion method of accounting as work is performed, based upon the ratio of costs or hours already incurred to the estimated total cost of completion or hours of work to be performed. Revenue recognized at any point in time is limited to the amount funded by the U.S. government or contracting entity. We account for product development and research contracts that have established prices for distinct phases as if each phase were a separate contract. In some instances, we are contracted to create a deliverable which is anticipated to go into full production. In those cases, we discontinue the percentage of completion method after formal qualification of the deliverable has been completed and revenue is then recognized based on the criteria established for sale of products. In certain instances qualification may be achieved and delivery of production units may commence however our customer may have either identified new issues to be resolved or wish to incorporate a newer display technology. In these circumstances new units delivered will continue to be accounted for under the criteria established for sale of products.

We classify amounts earned on contracts in progress that are in excess of amounts billed as unbilled receivables and we classify amounts received in excess of amounts earned as billings in excess of revenues earned. We invoice based on dates specified in the related agreement or in periodic installments based upon our

29

invoicing cycle. We recognize the entire amount of an estimated ultimate loss in our financial statements at the time the loss on a contract becomes known.

Accounting for design, development and production contracts requires judgment relative to assessing risks, estimating contract revenues and costs, and making assumptions for schedule and technical issues. Due to the size and nature of the work required to be performed on many of our contracts, the estimation of total revenue and cost at completion is complicated and subject to many variables. Contract costs include material, labor and subcontracting costs, as well as an allocation of indirect costs. We have to make assumptions regarding the number of labor hours required to complete a task, the complexity of the work to be performed, the availability and cost of materials, and performance by our subcontractors. For contract change orders, claims or similar items, we apply judgment in estimating the amounts and assessing the potential for realization. These amounts are only included in contract value when they can be reliably estimated and realization is considered probable. We have accounting policies in place to address these as well as other contractual and business arrangements to properly account for long-term contracts. If our estimate of total contract costs or our determination of whether the customer agrees that a milestone is achieved is incorrect, our revenue could be overstated and profits would be negatively impacted.

Bad Debt

We maintain allowances for doubtful accounts for estimated losses resulting from the inability of our customers to make required payments. This estimate is based on an analysis of specific customer creditworthiness and historical bad debts experience. If the financial condition of our customers were to deteriorate, resulting in their inability to make future payments, additional allowances may be required.

Inventory

We provide a reserve for estimated obsolete or unmarketable inventory based on assumptions about future demand and market conditions and our production plans. Inventories that are obsolete or slow moving are generally fully reserved (representing the estimated net realizable value) as such information becomes available. Our III-V products are made to each customer s unique specifications and are generally produced upon receipt of a customer order. The manufacturing time to make our III-V products is less than one day; accordingly our III-V inventory consists primarily of raw material, primarily gallium arsenide wafers, or finished products. The finished product may be at our facilities or at our customer s facilities under consignment programs. Our display products are manufactured based upon production plans whose critical assumptions include non-binding demand forecasts provided by our customers, lead times for raw materials, lead times for wafer foundries to perform circuit processing and yields. If a customer were to cancel an order or actual demand was lower than forecasted demand, we could not sell the excess III-V inventory and we may not be able to sell the excess display inventory and additional reserves would be required. If we were unable to sell the excess inventory, we would establish reserves to reduce the inventory to its estimated realizable value (generally zero).

Investment Valuation

At December 26, 2009 we held minority investments in Micrel Incorporated (Micrel) and Advance Wireless Semiconductor Company (AWSC), both publicly traded companies whose share price has been, and may continue to be, highly volatile. We consider these investments to be available for sale and accordingly account for fluctuations in the value of these investments in accumulated other comprehensive income. The fair market value of Micrel and AWSC were $1.6 million and $5.1 million at December 26, 2009, respectively.

We periodically make equity investments in private companies, accounted for on the cost or equity method, whose values are difficult to determine. When assessing investments in private companies for an other-than-temporary decline in value, we consider such factors as, among other things, the share price from the investee s latest financing round, the performance of the investee in relation to its own operating targets and its business

plan, the investee s revenue and cost trends, the liquidity and cash position, including its cash burn rate and market acceptance of the investee s products and services. Because these are private companies which we do not control we may not be able to obtain all of the information we would want in order to make a complete assessment of the investment on a timely basis. Accordingly, our estimates may be revised if other information becomes available at a later date.

In addition to the above we make investments in government and agency-backed securities and corporate debt securities. For all of our investments we provide for an impairment valuation if we believe a decline in the value of an investment is other-than-temporary, which may have an adverse impact on our results of operations. The determination of whether a decline in value is other-than-temporary requires that we estimate the cash flows we expect to receive from the security. We use publicly available information such as credit ratings and financial information of the entity that issued the security in the development of our expectation of the cash flows to be received. Historically, we have periodically recorded other than temporary impairment losses.

Impairment of Long-Lived Assets and Long-Lived Assets to be Disposed of

We periodically review the carrying value of our long-lived assets to determine if facts and circumstances suggest that they may be impaired or that the amortization or depreciation period may need to be changed. The carrying value of a long-lived asset is considered impaired when the anticipated identifiable undiscounted cash flows from such asset are less than its carrying value. For assets that are to be held and used, impairment is measured based upon the amount by which the carrying amount of the asset exceeds its fair value. If our estimates of anticipated future cash flows or market conditions were incorrect, additional impairment charges may be required. We did not incur any long lived asset impairment charges in 2009, 2008 or 2007.

Product Warranty

We generally sell products with a limited warranty of product quality and a limited indemnification of customers against intellectual property infringement claims related to our products. We accrue for known warranty and indemnification issues if a loss is probable and can be reasonably estimated. As of December 26, 2009, we had a warranty reserve of $1.6 million, which represents the estimated liabilities for warranty claims in process, potential warranty issues customers have notified us about and an estimate based on historical failure rates. For the fiscal years 2009, 2008 and 2007, our warranty expense was approximately $1.2 million, $1.5 million and $0.6 million, respectively. If our estimates for warranty claims are incorrect, our profits would be impacted.

Income Taxes

We have historically incurred domestic operating losses from both a financial reporting and tax return standpoint. We establish valuation allowances if it appears more likely than not that our deferred tax assets will not be realized. These judgments are based on our projections of taxable income and the amount and timing of our tax operating loss carryforwards and other deferred tax assets. Given our federal operating tax loss carryforwards, we do not expect to pay domestic federal taxes in the near term. It is possible that we could pay domestic alternative minimum taxes and state income taxes. We are also subject to foreign taxes from our Korean and Taiwanese subsidiary operations.

Our income tax provision is based on calculations and assumptions that will be subject to examination by tax authorities. Despite our history of operating losses there can be exposures for state taxes, federal alternative minimum taxes or foreign tax that may be due. We regularly assess the potential outcomes of these examinations and any future examinations for the current or prior years in determining the adequacy of our provision for income taxes. Should the actual results differ from our estimates, we would have to adjust the income tax provision in the period in which the facts that give rise to the revision become known. Such adjustment could have a material impact on our results of operations. We have historically established valuation allowances against

all of our net deferred tax assets because of our history of generating operating losses and restrictions on the use of certain items. Our evaluation of the recoverability of deferred tax assets has also included analysis of the expiration dates of net operating loss carryforwards.

Stock Compensation

There were no stock options granted in fiscal years 2009, 2008 or 2007. The fair value of nonvested restricted common stock awards is generally the market value of the Company s equity shares on the date of grant. The nonvested common stock awards require the employee to fulfill certain obligations, including remaining employed by the Company for one, two or four years (the vesting period) and in certain cases meeting performance criteria. The performance criteria primarily consist of the achievement of the Company s annual incentive plan goals. For nonvested restricted common stock awards which solely require the recipient to remain employed with the Company, the stock compensation expense is amortized over the anticipated service period. For nonvested restricted common stock awards which require the achievement of performance criteria, the Company reviews the probability of achieving the performance goals on a periodic basis. If the Company determines that it is probable that the performance criteria will be achieved, the amount of compensation cost derived for the performance goal is amortized over the service period. If the performance criteria are not met, no compensation cost is recognized and any previously recognized compensation cost is reversed. The Company recognizes compensation costs on a straight-line basis over the requisite service period for time vested awards. For awards that vest based on performance conditions, the Company uses the accelerated model for graded vesting awards.

Results of Operations

We are a leading developer and manufacturer of advanced semiconductor materials and miniature displays. We use our proprietary semiconductor material technology to design, manufacture and market our III-V and CyberDisplay products for use in highly demanding commercial wireless communications and high-resolution portable consumer electronic applications. Our products enable our customers to develop and market an improved generation of products for these target applications.

We have two principal sources of revenues: product revenues and research and development revenues. Product revenues consist of sales of our III-V products, principally gallium arsenide (GaAs) HBT transistor wafers, and CyberDisplay products. Research and development revenues consist primarily of development contracts with agencies or prime contractors of the U.S. government. Research and development revenues were $6.5 million, or 5.7% of total 2009 revenues, $7.2 million, or 6.3% of total 2008 revenues and $4.0 million, or 4.0% of total revenues in 2007.

Kowon, our Korean subsidiary and one of our reportable segments, provides to us back-end packaging services related to our CyberDisplay products as well as selling displays to other customers. Kopin Taiwan Corporation (KTC), our Taiwanese subsidiary and one of our reportable segments, in conjunction with our two domestic facilities, manufactures our III-V products.

Fiscal Year 2009 Compared to Fiscal Year 2008

Revenues. Our revenues, which include product sales and amounts earned from research and development contracts, for fiscal years 2009 and 2008 were as follows (in millions):

Revenues	**2009**	**2008**
III-V	$ 46.5	$ 47.0
CyberDisplay	68.2	67.8
Total	$ 114.7	$ 114.8

Table of Contents

The decrease in our III-V revenues resulted from our customers reacting to the declining economic situation starting in late 2008 by reducing orders in the first quarter of 2009, and declining prices of our HBT products, partially offset by the consolidation of Kopin Taiwan Corporation s (KTC) revenues for the five month period ending December 26, 2009. We believe there was an increase in demand of 3G or smart phones in 2009 over 2008. 3G and smart phones offer more functions, for example web browsing, than a standard wireless handset. 3G and smart phones require more HBT transistors than a standard wireless handset to support the increased functionality. We believe the increase in industry sales of 3G and smart phones will continue in 2010. In the third quarter of 2009 we increased our ownership percentage of KTC from approximately 35% to 87% and commenced consolidating the results of KTC in the third quarter of 2009. Included in Kopin s consolidated results of operations for 2009 is $1.2 million of revenues from KTC. Previous to the third quarter of 2009 we accounted for KTC on the equity method. KTC manufactures HBT transistor wafers primarily for us but also sells to other Taiwanese companies.

In July 2010 our purchase and supply agreement with our largest III-V customer, a customer which represented 28% of our 2009 revenues expires (see Item 1A, Risk Factors for explanation of percent of revenue calculation), subject to a last time buy option. If we do not renew this agreement or increase HBT sales to other customers our sales may decline. In addition, in 2010 this same customer is transitioning its production process from using 4-inch HBT transistor wafers to 6-inch HBT transistor wafers. We currently manufacture and sell both 4 and 6-inch transistor wafers. If we are unable to get our reactors, including the reactors at KTC, qualified by this and our other customers, or if we are able to get the reactors qualified but can not manufacture the quantity our customers require or can not manufacture on 6-inch HBT transistor wafers in a cost effective manner, our revenues and results of operations could decline significantly.

The increase in display revenues in fiscal year 2009 compared to fiscal year 2008 resulted from an increase in sales of our CyberDisplay products to customers that use them for military applications partially offset by decreases in sales of our products for consumer electronic and eyewear applications. Display revenues for 2009 and 2008 were as follows:

CyberDisplay Revenues by Category (in millions)	**2009**	**2008**
Military Applications	$ 51.5	$ 36.8
Consumer Electronic Applications	9.2	18.2
Eyewear Applications	1.8	6.4
Research & Development	5.7	6.4
Total	$ 68.2	$ 67.8

Revenues of our Korean subsidiary, Kowon, are included in CyberDisplay revenues and sales are primarily to us and Samsung Electronics for digital still camera and camcorder applications. Kowon s revenues decreased as a result of lower demand from us due to lower sales of displays to customers that use them for digital still camera applications and a decline in demand from Samsung. Total CyberDisplay revenues by segment for 2009 and 2008 were as follows:

CyberDisplay Revenues by Segment (in millions)	**2009**		**2008**	
Kopin U.S. revenues		$ 67.9		$ 62.2
Kowon revenues to other customers				
Kowon revenues	$ 8.7		$ 20.6	
Kowon sales to Kopin	(8.4)	0.3	(15.0)	5.6
Total Revenues		$ 68.2		$ 67.8

We have been reducing our emphasis on sales of our display products for certain digital still camera and camcorder applications because of the low gross profit margins from these sales, and, as a result, in addition to

the impact on sales of consumer electronic products from the global economic downturn, we expect sales of our CyberDisplay products for digital still camera and camcorder applications to decline in 2010. We also anticipate, based on current discussions with our customers and certain contractual obligations, that the prices of certain of our products will decline in fiscal year 2010. We anticipate the average selling price of our HBT transistor wafers and display products sold to customers for consumer electronics applications will decline approximately 5% during fiscal year 2010 relative to 2009. We expect sales prices of our display products for military applications to remain relatively flat for 2010 as compared to 2009. The overall increase or decrease in the average sales price of our display products will be dependent on the sales mix of commercial and military display sales.

The back-end packaging manufacturing process of our displays which are sold for consumer applications is performed at Kowon. As discussed above, we expect sales of our consumer display products to decline in fiscal 2010 as compared to fiscal year 2009 levels. Kowon had a net loss of $0.9 million and net income of $3.2 million before intercompany eliminations for fiscal year 2009 and fiscal year 2008, respectively. Sales of our display products for use in consumer electronic applications may decline such that Kowon may have a loss from operations in 2010. If sales of our display products for consumer electronic applications do not increase or new markets are not identified, we may have to record impairment charges on Kowon s long lived assets, which are recorded in our financial statements at $3.0 million at December 26, 2009.

We expect revenue of between $120 million and $130 million for fiscal year 2010, however, due to the current worldwide economic situation our ability to forecast revenues and results of operations is very limited. Our forecasts are based on our discussions with customers and our expectations about the future global economy and are not based on firm non-cancellable orders.

International sales represented 17% and 29% of product revenues for fiscal years 2009 and 2008 respectively. The decrease in international sales is primarily attributable to an increase in sales of our CyberDisplay products for U.S. military applications and III-V products to customers who are primarily U.S. based and a decline in sales of our display products for digital still camera and camcorder applications to Asian customers. We expect our 2010 revenues will primarily be from customers located in the U.S. International sales are primarily sales of CyberDisplay products to consumer electronic manufacturers located in Japan, Korea and China. Our international sales are primarily denominated in U.S. currency. Consequently, a strengthening of the U.S. dollar could increase the price in local currencies of our products in foreign markets and make our products relatively more expensive than competitors products that are denominated in local currencies, leading to a reduction in sales or profitability in those foreign markets. In addition, sales of our CyberDisplay products in Korea are transacted through our Korean subsidiary, Kowon Technology Co., LTD. Kowon s sales are primarily denominated in U.S. dollars. However, Kowon s local operating costs are primarily denominated in Korean won. Kowon also holds U.S. dollars in order to pay various expenses. As a result, our financial position and results of operations are subject to exchange rate fluctuation in transactional and functional currency. We have not taken any protective measures against exchange rate fluctuations, such as purchasing hedging instruments with respect to such fluctuations, because of the historically stable exchange rate between the Japanese yen, Korean won and the U.S. dollar.

Cost of Product Revenues.

	2009	**2008**
Cost of product revenue (in millions)	$ 76.0	$ 78.0
Cost of product revenue as a % of revenues	70.3%	72.5%

Cost of product revenues, which is comprised of materials, labor and manufacturing overhead related to our products, decreased approximately $2.0 million or 3% from 2008 to 2009. Our gross margin is affected by increases or decreases in the sales prices of our products, changes in raw material prices, unit volume of sales, manufacturing efficiencies and the mix of products sold. As discussed above our sales prices historically decline on an annual basis. Our overhead costs and, to a lesser extent, our labor costs are normally stable and do not

Table of Contents

fluctuate significantly during any twelve month period. Essentially, we consider labor and overhead costs to be fixed in nature over the short term and therefore profitability is very dependent on the sales prices of our products and the volume of sales. Gross margins increased in 2009, as compared to 2008, because of an increase in sales of our display products for military applications, which have higher margins, and a decline in sales of display products for consumer electronic applications which have comparatively lower margins. Offsetting these increases in gross margins was a decline in the average unit selling prices of our III-V products as compared to 2008. For 2010 we anticipate sale prices of display products for military applications to remain stable and sales prices of our III-V products for wireless handset applications and our displays products for consumer electronic applications to decline. As a result, in order for us to increase gross margins we need to increase manufacturing efficiencies and or increase the unit volume of sales.

There are a number of different display technologies which can produce displays in small form factors. We believe one of the benefits of our display technology is the ability to produce high resolution displays in small form factors. The camcorder and digital still camera markets are mature and the majority of these devices use low-resolution display products which results in our having limited, if any, competitive advantage over our competitors and, therefore, the ability to sell displays into these markets is very price dependent. Accordingly for us to generate display revenues with above average gross margins, we will need to increase sales to customers who buy our higher resolution display products, such as the military, or develop new categories, such as eyewear.

Research and Development. Research and development (R&D) expenses are incurred in support of internal display and III-V product development programs or programs funded by agencies or prime contractors of the U.S. government and commercial partners. R&D revenues associated with funded programs are presented separately in revenue in the statement of operations. Research and development costs include staffing, purchases of materials and laboratory supplies, circuit design costs, fabrication and packaging of display products, and overhead. For fiscal years 2009 and 2008 R&D expense was as follows (in millions):

Research and development expense	**2009**	**2008**
Funded	$ 3.6	$ 5.1
Internal	10.5	10.9
Total	$ 14.1	$ 16.0

R&D expense decreased in 2009 as compared to the prior year primarily because of a decline in funded military programs. 2009 internal research and development expense was essentially the same as 2008.

Selling, General and Administrative. Selling, general and administrative (S,G&A) expenses consist of the expenses incurred by our sales and marketing personnel and related expenses, and administrative and general corporate expenses.

	2009	**2008**
Selling, general and administrative expense (in millions)	$ 14.1	$ 16.0
Selling, general and administrative expense as a % of revenues	12.3%	13.9%

The decrease in S,G&A expenses in 2009 as compared to 2008 is attributable to decreases of approximately $0.7 million in allowance for bad debts, $0.3 million of depreciation expenses, $0.9 million of labor and stock based compensation expense and $0.3 million of professional fees partially offset by an increase in warranty expense of $0.1 million. Included in the $0.7 million of decline in bad debt expense is the reversal of a $0.5 million allowance for doubtful accounts established at December 27, 2008 for the possible uncollectible receivables from KTC. The reversal of the KTC allowance and the overall decrease in the allowance for doubtful accounts resulted in a net credit of $0.6 million in S,G&A. Accordingly, excluding the KTC transaction S,G&A would have been $14.6 million for 2009. A more complete description of the KTC allowance for doubtful accounts is below.

Table of Contents

In December 2009 and April 2009, the Compensation Committee of the Company approved the issuance of 778,213 and 676,726, respectively, of restricted stock awards to certain of our employees. We issue restricted stock awards either as part of our annual incentive plan (incentive equity awards) or to induce a prospective employee or current employee to join us or remain with us for at least a certain period of time (retention equity awards). The number of shares of our common stock that an employee will ultimately receive and the compensation expense that we will ultimately recognize under an incentive equity award is based on achieving certain financial milestones and remaining with the Company for a specific period of time. In the case of retention equity awards shares earned are solely a function of time employed. We filed a proxy statement on April 20, 2001 describing the 2001 incentive plan, and we have also filed on behalf of certain officers and directors Form 4s with the Securities and Exchange Commission which detail the conditions under our officers can earn the restricted stock awards. The 2001 proxy statement and Form 4s are available on our website www.kopin.com. In December 2008 the Compensation Committee approved the issuance of 363,191 restricted stock awards to employees subject to certain conditions. These conditions were essentially the same conditions for the 2009 awards. In addition, as part of its Board of Director compensation in fiscal year 2009 and 2008 we issued 120,000 shares of restricted stock to our board members representing the annual grants for fiscal years 2009 and 2008. The equity awards to the Board of Directors vest 25% per year over the four years following the grant.

In connection with the issuance of the awards above, and the amortization of awards issued before fiscal year 2008, we recorded stock compensation expenses of $1.9 million and $2.7 million for fiscal years 2009 and 2008, respectively.

Other Income and Expense.

(in millions)	**2009**	**2008**
Interest income	$ 2.2	$ 3.3
Other income and expense, net	0.7	0.1
Foreign currency transaction (losses) gains	(1.0)	2.3
Other-than-temporary Impairment of marketable debt securities	(0.9)	(1.3)
Subtotal	1.0	4.4
Impairment of investment in Kenet		(2.7)
Other-than-temporary impairment of Micrel common stock		(0.2)
Gain (loss) on loans to KTC	1.2	(1.2)
Gain on remeasurement of investment in KTC	0.6	
Gain on sale of patents	6.3	
Other income and expense	9.1	0.3

Other income and expense, net, as shown above, is composed of interest income, foreign currency transaction and remeasurement gains and losses incurred by our Korean and Taiwanese subsidiaries, other-than temporary impairment on marketable debt securities, gains resulting from our obtaining a controlling interest in KTC and license fees. For 2009, we recorded $1.0 million of foreign currency losses as compared to $2.3 million of foreign currency gains for 2008. This was primarily attributable to decreased fluctuations in the US dollar and Korean won currency exchange rate. Other income and expense, net for 2009 and 2008 also included expenses of $0.9 million and $1.3 million, respectively, to record an impairment of certain marketable debt securities which were deemed other-than-temporarily impaired. In 2008 we recorded a loss of $2.7 million on the sale of our investment in Kenet and $0.2 million for an other-than-temporary impairment charge on our investment in Micrel.

As our marketable debt securities have matured we have been reinvesting in securities which, due to current interest rates, have lower yields than the securities which matured, accordingly we anticipate that our interest income will decline in 2010.

In conjunction with our obtaining a controlling interest in KTC in 2009 we recorded a gain of $0.6 million for the remeasurement of our investment in KTC to fair market value and $1.2 million related to the repayment of loans from KTC which had been previously written-off. In 2008 we loaned KTC $2.0 million and due to their liquidity problems, we had subsequently recorded (in 2008) both $0.8 million of equity losses in KTC and a loan loss reserve of $1.2 million. A more complete explanation of the impact on our financial statements from our obtaining a controlling interest in KTC is below.

In fiscal year 2008 we entered into an agreement wherein we agreed to sell certain patents we were no longer using to a party which would attempt to sub-license the patents. Under the terms of the agreement the amount we would receive for the sale of the patents was a percentage of any license fees, after expenses, from the sublicense. In 2009 we recorded $6.3 million of license fees from the sale of these patents. We do not expect to receive any material additional amounts from the sales of these patents.

Equity earnings (losses) in unconsolidated affiliates. Our equity earnings (losses) in unconsolidated affiliates consists of our approximate 19% share of the losses of KoBrite totaling $0.3 million in 2009 and $0.3 million in 2008, offset by the effects of the repayment of a loan by KTC, which is discussed in more detail below, in 2009 of $0.8 million and our approximate 35% share in the losses of KTC totaling $0.8 million in 2008.

Tax (provision) benefit. The provision for income taxes for the fiscal years ended 2009 and 2008 represent alternative minimum taxes owed to U.S. federal and state taxing authorities of $0.7 million and $0.3 million, respectively, and foreign taxes on the income of our subsidiary Kowon of $0.0 million and $0.5 million, for fiscal year 2009 and 2008, respectively. For 2010 we expect to have federal and state tax liabilities based on Alternative Minimum Tax rules. For state taxes, we expect to fully utilize our available state net operating loss carryforwards and accordingly we expect to have a state tax provision for financial reporting purposes in 2010. We do have net operating loss carryforwards for the state of California but California has currently suspended the use of this tax asset.

Net (income) loss attributable to noncontrolling interest. We own approximately 78% of the equity of Kowon Technology Co. Ltd. (Kowon) and 87% of the equity of KTC. Net loss (income) attributable to the noncontrolling interest on the consolidated statement of operations represents the portion of the results of operations of Kowon and KTC which are allocated to the shareholders of the approximately 22% of Kowon and 13% of KTC not owned by us. The change in the net loss (income) attributable to the noncontrolling interest of our subsidiaries is as follows:

	2009	2008
Kowon	$ 0.3	$ (0.7)
KTC	(0.1)	
Total	$ 0.2	$ (0.7)

Acquisition of the controlling interest in Kopin Taiwan Corporation (KTC).

On July 30, 2009, we purchased 19,572,468 new shares of KTC common stock for approximately $5,975,000 from KTC (the Transaction). We also purchased 128,226 shares of KTC from Microelectronics Technology Inc. (MTI) for $300,000. As a result of these two transactions and our previous investments in KTC, we own approximately 87% of the now outstanding common stock of KTC. The remaining 13% is held by other investors and employees of KTC. Subsequent to the Transaction, KTC repaid the outstanding balance of loans due to us from KTC in the aggregate amount of approximately $2,012,000. We have consolidated KTC beginning July 31, 2009.

Table of Contents

The consolidated statement of operations for the periods shown below includes the following amounts (in millions) which were related to transactions with KTC:

	2009	2008
Gain on remeasurement of Kopin s previous investment in KTC	$ 0.6	$
Repayment of loan by KTC which was previously written-off	2.0	
Reduction (increase) in bad debt allowance	0.5	(0.5)

In the year ended December 27, 2008 we recorded equity losses of approximately $0.8 million and a loan loss reserve of approximately $1.2 million in connection with $2.0 million we loaned KTC in fiscal 2008. As a result of the Transaction the loan was repaid, and in 2009 we recorded a gain on the loan repayment of approximately $1.2 million and equity in earnings of unconsolidated affiliates of $0.8 million.

In fiscal 2008, due to KTC s liquidity problems we recorded allowances for possible bad debts for the excess amount KTC owed to us over what we owed KTC. At December 27, 2008, the allowance for possible bad debts was approximately $0.5 million. During the nine months ended September 26, 2009 we reduced the allowance to $0, resulting in a reduction of selling, general and administrative expenses of $0.5 million.

We previously recorded our investment in KTC under the equity method and wrote down the investment to $0. We remeasured and wrote-up our investment in KTC by approximately $0.6 million which represented the fair market value of the investment immediately prior to the Transaction.

Fiscal Year 2008 Compared to Fiscal Year 2007

Revenues. Our revenues, which include product sales and amounts earned from research and development contracts, for fiscal years 2008 and 2007, were as follows (in millions):

Revenues	**2008**	**2007**
III-V	$ 47.0	$ 43.5
CyberDisplay	67.8	54.6
Total	$ 114.8	$ 98.1

The increase in our III-V revenues resulted from a net increase in unit demand for our HBT transistor wafers from customers that use them in wireless handset applications, which was partially off set by price declines of our HBT products. The increase in display revenues in fiscal year 2008 compared to fiscal year 2007 resulted from an increase in sales of our CyberDisplay products to customers that use them for military applications. Display revenues for consumer and military applications for 2008 and 2007 were as follows:

CyberDisplay Revenues by Category (in millions)	**2008**	**2007**
Military Applications	$ 36.8	$ 15.8
Consumer Electronic Applications	18.2	29.3
Eyewear Applications	6.4	6.3
Research & Development	6.4	3.2
Total	$ 67.8	$ 54.6

Table of Contents

Revenues of our Korean subsidiary, Kowon, are included in CyberDisplay revenues and sales are primarily to us and Samsung Electronics for camcorder applications. Kowon s revenues decreased as a result of lower demand from us due to lower sales of displays to customers that use them for digital still camera applications and a decline in demand from Samsung for displays for camcorder applications. CyberDisplay revenues by segment were as follows for 2008 and 2007:

CyberDisplay Revenues by Segment (in millions)	2008		2007	
Kopin U.S. revenues		$ 62.2		$ 49.0
Kowon revenues to other customers				
Kowon revenues	$ 20.6		$ 34.4	
Kowon sales to Kopin	(15.0)	5.6	(28.8)	5.6
Total CyberDisplay Revenues		$ 67.8		$ 54.6

International sales represented 29% and 41% of product revenues for fiscal years 2008 and 2007 respectively. The decrease in international sales is primarily attributable to an increase in sales of our CyberDisplay products for U.S. military applications and a decline in sales of our display products for digital still camera and camcorder applications to Asian customers.

Cost of Product Revenues.

	2008	2007
Cost of product revenue (in millions)	$ 78.0	$ 78.6
Cost of product revenue as a % of revenues	72.5%	83.5%

Cost of product revenues, which is comprised of materials, labor and manufacturing overhead related to our products, decreased approximately $0.6 million or 1% from 2007 to 2008. Our gross margin is affected by increases or decrease in the sales prices of our products, changes in raw material prices, unit volume of sales, manufacturing efficiencies and the mix of products sold. As discussed above our sales prices historically decline on an annual basis. Our overhead costs and, to a lesser extent, our labor costs are normally stable and do not fluctuate significantly during a three or twelve month period. Essentially, we consider labor and overhead costs to be fixed in nature over the short term and therefore profitability is very dependent on our sales prices of the products and volume of sales. Gross margins increased in 2008, as compared to 2007, because of an increase in sales of our display products for military applications, which have higher margins, and a decline in sales of display products for consumer electronic applications which have low margins. Offsetting these increases in gross margins was a decline in the average unit selling prices of our III-V products as compared to 2007.

Research and Development. Research and development (R&D) expenses are incurred in support of internal display and III-V product development programs or programs funded by agencies or prime contractors of the U.S. government and commercial partners. R&D revenues associated with funded programs are presented separately in revenue in the statement of operations. Research and development costs include staffing, purchases of materials and laboratory supplies, circuit design costs, fabrication and packaging of display products, and overhead. For fiscal years 2008 and 2007 R&D expense was as follows (in millions):

Research and development expense	2008	2007
Funded	$ 5.1	$ 3.2
Internal	10.9	8.3
Total	$ 16.0	$ 11.5

R&D expense increased in 2008 as compared to the prior year primarily because of an increase in funded programs from agencies and prime contractors of the U.S. government.

39

Table of Contents

The increase in internal research and development expenses was primarily attributed to costs to develop our 8 inch display and MOCVD III-V manufacturing lines.

Selling, General and Administrative. Selling, general and administrative (S,G&A) expenses consist of the expenses incurred by our sales and marketing personnel and related expenses, and administrative and general corporate expenses.

	2008	2007
Selling, general and administrative expense (in millions)	$ 16.0	$ 18.0
Selling, general and administrative expense as a % of revenues	13.9%	18.3%

The decrease in S,G&A expenses in 2008 versus 2007 is attributable to a decrease of approximately $1.4 million for professional fees associated with the stock option practice investigation and the restatement of our historical financial statements, $0.3 million associated with reduced marketing at our Korean subsidiary and $0.3 million of information technology expense, which were partially offset by a $0.5 million increase in allowances for accounts receivable and other professional fees of $0.2 million.

Included in S,G&A is approximately $150,000 for professional fees for the preparation of our tender offer to purchase 197,218 stock options from employees. Had we not purchased these stock options, they may have resulted in excise taxes for the employees and reporting requirements for us under section 409(A) of the Internal Revenue code. We agreed to pay approximately $180,000 for these stock options which represented the fair market value of the options as determined through the use of the Black-Scholes-Merton option-pricing model.

In December 2008, the Compensation Committee of the Company approved the issuance of 363,191 restricted stock awards to certain of our employees. An employee can earn awards if the employee remains with the Company for the fiscal year 2009 and the product line the employee works with achieves certain performance conditions in fiscal year 2009. In December 2007 the Compensation Committee approved the issuance of 1,273,016 restricted stock awards to employees subject to certain conditions. These conditions, which primarily consisted of the Company meeting its listing requirements of the NASDAQ stock exchange, were fulfilled in April 2008 and the restricted stock awards were granted in April 2008. In addition, as part of its Board of Director compensation in fiscal year 2008 we issued 120,000 shares of restricted stock to our board members representing the annual grants for fiscal years 2008 and 2007.

Of the 1,273,016 awards, employees could earn 590,016 shares of the awards based on remaining with the Company for fiscal year 2008 and the product line the employee worked with achieved certain performance conditions in 2008. The remaining 682,500 restricted stock awards to employees and the Board of Directors requires them to fulfill certain obligations including continued employment with us or remaining on our Board of Directors for periods of either two or four years to earn their portion of the award.

In connection with the issuance of the awards above, and the amortization of awards issued before fiscal year 2007, we recorded stock compensation expenses of $2.7 million and $2.3 million for fiscal years 2008 and 2007, respectively.

Other Income and Expense.

	2008	2007
Other income and expense (in millions)	$ 0.3	$ 4.4

Other income and expense in 2008 includes interest and miscellaneous income of $3.4 million, $2.3 million of foreign exchange gains, a loss of $2.7 million on the sale of our Kenet investment, a $1.2 million charge for the write-off of certain loans to KTC, $1.3 million for other-than-temporary impairment charges for corporate debt instruments, and $0.2 million for the other-than-temporary impairment charge on our investment in Micrel.

Other income and expense for 2007 includes interest and miscellaneous income of $4.5 million, $0.1 million of foreign exchange gains, $0.1 million for an other-than-temporary impairment of our investment in Micrel, and $0.1 of miscellaneous bank fees and other expense.

During 2008 KTC incurred operating losses and, as a result, it experienced cash flow problems. On October 8, 2008 we entered into an agreement wherein we loaned KTC $2.0 million and received first and third liens on its building and certain equipment. For financial accounting reporting purposes $0.8 million of the $2.0 million was considered an equity investment and is included in Equity losses in unconsolidated affiliates. At December 27, 2008 we reviewed the collectability of the loan to KTC and recorded a loan loss reserve of $1.2 million based on KTC s projected cash flows.

We have investments totaling $16.2 million in corporate debt instruments. $14.6 million of these are Floating Rate Notes whose maturity is over multiple years but whose interest rate is reset every three months based on then current three month London Interbank Offering Rate (3 month LIBOR). We determine the fair market values of these corporate debt instruments through the use of a model which incorporates the 3 month LIBOR and the credit default swap rate of the issuer. After the fair market value of these corporate debt instruments is computed under this method we review whether our valuation falls within the bid and ask price spread of the same or similar investments which are traded on several markets. We do not use these bid and ask prices as the sole input in valuing the instruments because the spreads between the bid and ask prices have been increasing, which indicate that they may not reflect an accurate measure of fair market value. The other-than-temporary impairment of $1.3 million discussed above represents the difference between the acquisition cost of the investments and our computation of their fair market value for all corporate debt instruments whose acquisition cost has exceeded their computed fair market value for 12 months or for which other indicators of impairment exist.

Equity losses in unconsolidated affiliates. Our equity losses in unconsolidated affiliates consists of our approximate 28% share of the losses of KoBrite totaling $0.3 million in 2008 and $0.3 million in 2007 and our approximate 40% share in the losses of KTC totaling $0.8 million in 2008.

Tax (provision) benefit. The provision for income taxes for the fiscal years ended 2008 and 2007 represent alternative minimum taxes owed to U.S. federal and state taxing authorities of $0.3 million and $0.1 million, respectively, and foreign taxes on the income of our subsidiary Kowon of $0.5 million and $0.4 million, for fiscal years 2008 and 2007, respectively.

Net (loss) income attributable to noncontrolling interest. We own approximately 78% of the equity of Kowon Technology Co. Ltd. (Kowon). Minority interest on the consolidated statement of operations represents the portion of the results of operations of Kowon which is allocated to the shareholders of the approximately 22% of Kowon not owned by us. The change in the minority interest in (income) loss of subsidiary is the result of the change in the results of operations of Kowon. The results of operations of Kowon were essentially the same in 2008 and 2007.

Liquidity and Capital Resources

As of December 26, 2009, we had cash and equivalents and marketable debt securities of $114.5 million and working capital of $134.2 million compared to $100.0 million and $116.8 million, respectively, as of December 27, 2008. The increase in cash and equivalents and marketable securities was primarily due to cash provided by operating activities of approximately $23.4 million which was partially offset by capital expenditures of $3.7 million and repurchase of our common stock for $5.3 million.

We have a purchase and supply agreement with a significant HBT customer that expires in July 2010. This agreement also provides for a last time buy option. Under the terms of this agreement we have agreed to maintain capacity levels for manufacturing HBT wafers and we committed to a pricing schedule under certain circumstances.

The agreement also requires us to give prior notice if we exit our HBT product line. In consideration for this agreement the customer agreed to source 100% and 95% of its four and six inch HBT wafer needs, respectively, from us subject to the customer s right to source HBT wafers from other sources if we are unable to meet their requirements under certain circumstances. We agreed that failure to meet our supply obligations under the agreement would allow our customer to obtain court ordered specific performance and if we do not perform we could then be liable for monetary damages up to a maximum of $40 million.

We lease facilities located in Taunton and Westborough, Massachusetts, and Scotts Valley, California, under non-cancelable operating leases. We have two Taunton facilities, one whose lease expires in 2020 and the other in 2012. The Taunton lease which expires in 2020 may be extended for a 10 year term. The Westborough and Scotts Valley leases expire in 2012.

We expect to expend between $6.0 and $10.0 million on capital expenditures over the next twelve months, primarily for the acquisition of equipment to increase capacity in our III-V product line and implement the 8-inch production line for our CyberDisplay products.

As of December 26, 2009, we had substantial tax loss carry-forwards, which may be used to offset future federal taxable income. We may be subject to alternative minimum taxes, foreign taxes and state income taxes depending on our taxable income and sources of taxable income.

Historically we have financed our operations primarily through public and private placements of our equity securities. Over the past several years we have generated sufficient cash from operations to fund the business. We believe our available cash resources will support our operations and capital needs for at least the next twelve months.

Off Balance Sheet Arrangements

We have no off balance sheet arrangements.

Seasonality

The markets for our III-V and consumer electronic CyberDisplay products are traditionally seasonal and we would expect that as our business matures, sales of these products would be strongest in the third quarter followed by our second quarter then our fourth quarter and our first quarter would be our lowest sales quarter. The market for our display products for military applications is not expected to be seasonal. The timing of new product introductions may disrupt the implied seasonality of our business and the increase or decrease in sales of our military products may reduce or increase the seasonal nature of our commercial product sales.

Climate Change

We do not believe there is anything unique to our business which would result in climate change regulations having a disproportional affect on us as compared to U.S. industry overall.

Inflation

We do not believe our operations have been materially affected by inflationary forces.

Table of Contents

Contractual Obligations

The following is a summary of our contractual payment obligations for operating leases as of December 26, 2009:

Contractual Obligations	Total	Less than 1 year	1-3 Years	3-5 years	More than 5 years
Operating Lease Obligations	$ 7,778,106	$ 1,471,186	$ 2,847,545	$ 1,563,125	$ 1,896,250

Item 7A. ***Quantitative and Qualitative Disclosures About Market Risk***

We invest our excess cash in high-quality U.S. government, government-backed (Fannie Mae, FDIC guaranteed bonds and certificates of deposit) and corporate debt instruments, which bear lower levels of relative risk. We believe that the effect, if any, of reasonably possible near-term changes in interest rates on our financial position, results of operations, and cash flows should not be material to our cash flows or income. It is possible that interest rate movements would increase our unrecognized gain or loss on interest rate securities. Included in other assets are equity investments in Micrel, Incorporated (Micrel) of approximately $1.6 million and Advanced Wireless Semiconductor Company (AWSC) of approximately $5.1 million, respectively, which are subject to changes in value because of either specific operating issues or overall changes in the stock market. We are exposed to changes in foreign currency exchange rates primarily through our translation of our foreign subsidiary s financial position, results of operations, and transaction gains and losses as a result of non U.S. dollar denominated cash flows related to business activities in Asia, and remeasurement of United States dollars to the functional currency of our Kowon subsidiary. We are also exposed to the affects of exchange rates in the purchase of certain raw materials whose price is in U.S. dollars but the price on future purchases is subject to change based on the relationship of the Japanese Yen to the U.S. dollar. We do not currently hedge our foreign currency exchange rate risk. We estimate that any market risk associated with our international operations is unlikely to have a material adverse effect on our business, financial condition or results of operation. Our portfolio of marketable debt securities is subject to interest rate risk although our intent is to hold securities until maturity. The credit rating of our investments may be affected by the underlying financial health of the guarantors of our investments. We use Gallium Arsenide and Silicon wafers but do not enter into forward or futures hedging contracts.

Item 8. ***Financial Statements and Supplementary Data***

The financial statements required by this Item are included in this Report on pages 50 through 77. Reference is made to Item 15 of this Report.

Item 9. ***Changes in and Disagreements with Accountants on Accounting and Financial Disclosure***

Not Applicable.

Item 9A. ***Controls and Procedures***

Evaluation of Disclosure Controls and Procedures

We conducted an evaluation of the effectiveness of the design and operation of our disclosure controls and procedures (Disclosure Controls), as defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act, as of the end of the period covered by this Form 10-K. The controls evaluation was conducted under the supervision and with the participation of management, including our Chief Executive Officer and Chief Financial Officer. Disclosure Controls are controls and procedures designed to reasonably assure that information required to be disclosed in our reports filed under the Exchange Act, such as this Form 10-K, is recorded, processed, summarized and reported within the time periods specified in the U.S. Securities and Exchange Commission s (SEC s) rules and forms. Disclosure Controls are also designed to reasonably assure that such information is accumulated and communicated to our management, including the Chief Executive Officer and Chief Financial

Table of Contents

Officer, as appropriate to allow timely decisions regarding required disclosure. Our quarterly evaluation of Disclosure Controls includes an evaluation of some components of our internal control over financial reporting, and internal control over financial reporting is also separately evaluated on an annual basis for purposes of providing the management report which is set forth below.

Our Chief Executive Officer and Chief Financial Officer have concluded as of the end of the period covered by this Annual Report on Form 10-K, our disclosure controls and procedures were effective.

Management s Report on Internal Control Over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act. A company s internal control over financial reporting is a process designed by, or under the supervision of, the company s principal executive and principal financial officers, or persons performing similar functions, and effected by the Company s Board of Directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles and include those policies and procedures that:

- Pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company;
- Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made in accordance with authorizations of management and directors of the company; and
- Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company s assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Our management assessed the effectiveness of our internal control over financial reporting as of December 26, 2009, based on the criteria outlined in *Internal Control Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

Based on their assessment, management concluded that, as of December 26, 2009, the Company s internal control over financial reporting is effective based on those criteria.

Our independent registered public accounting firm that audited our consolidated financial statements included in this Form 10-K has issued an attestation report on our internal control over financial reporting. This report appears below.

Changes in Internal Control Over Financial Reporting

No significant changes were made to our internal controls during our fourth fiscal quarter that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Table of Contents

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of

Kopin Corporation

Taunton, Massachusetts

We have audited the internal control over financial reporting of Kopin Corporation and subsidiaries (the Company) as of December 26, 2009, based on criteria established in *Internal Control Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company s management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management s Report On Internal Control over Financial Reporting. Our responsibility is to express an opinion on the Company s internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company s internal control over financial reporting is a process designed by, or under the supervision of, the company s principal executive and principal financial officers, or persons performing similar functions, and effected by the company s board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company s internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company s assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 26, 2009, based on the criteria established in *Internal Control Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements and financial statement schedule as of and for the year ended December 26, 2009, of the Company and our report dated March 8, 2010 expressed an unqualified opinion on those financial statements and financial statement schedule and included an explanatory paragraph regarding the Company s adoption of the accounting standard related to Business Combinations, effective for business combinations entered into after December 28, 2008.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of

Kopin Corporation

Taunton, Massachusetts

We have audited the accompanying consolidated balance sheets of Kopin Corporation and subsidiaries (the Company) as of December 26, 2009 and December 27, 2008, and the related consolidated statements of operations, comprehensive income (loss), stockholders equity, and cash flows for each of the three years in the period ended December 26, 2009. Our audits also included the financial statement schedule listed in the Index at Item 15(a)(2). These financial statements and financial statement schedule are the responsibility of the Company s management. Our responsibility is to express an opinion on the financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of Kopin Corporation and subsidiaries as of December 26, 2009 and December 27, 2008, and the results of their operations and their cash flows for each of the three years in the period ended December 26, 2009, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

As discussed in Note 1 to the consolidated financial statements, the Company adopted the accounting standard related to Business Combinations, effective for business combinations entered into after December 28, 2008.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company s internal control over financial reporting as of December 26, 2009, based on the criteria established in *Internal Control Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated March 8, 2010 expressed an unqualified opinion on the Company s internal control over financial reporting.

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. Summary of Significant Accounting Policies

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Fiscal Year

The Company s fiscal year ends on the last Saturday in December. The fiscal years ended December 26, 2009, December 27, 2008 and December 29, 2007 each include 52 weeks and are referred to as fiscal years 2008, 2007 and 2006, respectively, herein.

Principles of Consolidation

The consolidated financial statements include the accounts of the Company, its wholly owned subsidiaries, a majority owned (78%) subsidiary, Kowon Technology Co., Ltd. (Kowon), located in Korea and, a majority owned (87%) subsidiary Kopin Taiwan Corporation (KTC) located in Taiwan (collectively the Company). All inter-company transactions and balances have been eliminated. Amounts of Kowon and KTC not attributable to the Company are referred to as noncontrolling interests in the consolidated statements of operations. Investment in business entities in which the Company does not have control, but has the ability to exercise significant influence over operating and financial policies are accounted for by the equity method.

Revenue Recognition

The Company recognizes revenue if four basic criteria have been met: (1) persuasive evidence of an arrangement exists; (2) delivery has occurred and services rendered; (3) the price to the buyer is fixed or determinable; and (4) collectability is reasonably assured. The Company does not recognize revenue for products prior to customer acceptance unless it believes the product meets all customer specifications and the Company has a history of consistently achieving customer acceptance of the product. Provisions for product returns and allowances are recorded in the same period as the related revenues. The Company analyzes historical returns, current economic trends and changes in customer demand and acceptance of product when evaluating the adequacy of sales returns and other allowances. Certain product sales are made to distributors under agreements allowing for a limited right of return on unsold products. Sales to distributors are primarily made for sales to the distributor s customers and not for their stocking of inventory. The Company delays revenue recognition for its estimate of distributor claims of right of return on unsold products based upon its historical experience with the Company s products and specific analysis of amounts subject to return based upon discussions with the Company s distributors or their customers.

The Company recognizes revenues from long-term research and development contracts on the percentage-of-completion method of accounting as work is performed, based upon the ratio of costs or hours already incurred to the estimated total cost of completion or hours of work to be performed. Revenue recognized at any point in time is limited to the amount funded by the U.S. government or contracting entity. The Company accounts for product development and research contracts that have established prices for distinct phases as if each phase were a separate contract. In some instances, the Company is contracted to create a deliverable which is anticipated to be qualified and go into full rate production stages. In those cases, the revenue recognition methodology will change from the percentage of completion method to the units-of-delivery method as new contracts are received after formal qualification has been completed.

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

The Company classifies amounts earned on contracts in progress that are in excess of amounts billed as unbilled receivables and classifies amounts received in excess of amounts earned as billings in excess of revenues earned. The Company invoices based on dates specified in the related agreement or in periodic installments based upon its invoicing cycle. The Company recognizes the entire amount of an estimated ultimate loss in its financial statements at the time the loss on a contract becomes known.

Research and Development Costs

Research and development expenses are incurred in support of internal display and III-V product development programs or programs funded by agencies or prime contractors of the U.S. government and commercial partners. Research and development costs include staffing, purchases of materials and laboratory supplies, circuit design costs, fabrication and packaging of experimental display products, and overhead, and are expensed immediately.

Cash and Equivalents and Marketable Securities

The Company considers all highly liquid, short-term debt instruments with original maturities of three months or less to be cash equivalents.

Marketable debt securities consist primarily of commercial paper, medium-term corporate notes, and United States government and agency backed securities. The Company classifies these marketable debt securities as available for sale at fair value in Marketable Securities. The investments in Micrel and AWSC are included in Other Assets as available-for-sale and at fair value. The Company records the amortization of premium and accretion of discounts on marketable debt securities in the results of operations.

The Company uses the specific identification method as a basis for determining cost and calculating realized gains and losses with respect to marketable debt securities. The gross gains and losses realized related to sales of marketable debt securities were not material during fiscal years 2009, 2008 and 2007.

Inventory

Inventory is stated at the lower of cost (determined on the first-in, first-out or specific identification method) or market and consists of the following at December 26, 2009 and December 27, 2008:

	2009	2008
Raw materials	$ 8,336,915	$ 7,679,199
Work-in-process	3,416,727	2,505,113
Finished goods	4,700,227	3,085,174
	$ 16,453,869	$ 13,269,486

Inventory on consignment at customer locations was $3.2 million and $2.3 million at December 26, 2009 and December 27, 2008, respectively.

Property, plant and equipment

Property, plant and equipment are recorded at cost. Depreciation and amortization are provided using the straight-line method over the estimated useful lives of the assets, generally 3 to 10 years. Leasehold improvements and leased equipment are amortized over the shorter of the term of the lease or the useful life of

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

the improvement or equipment. As discussed below, obligations for asset retirement are accrued at the time property, plant and equipment is initially purchased or as such obligations are generated from use.

Product Warranty

The Company generally sells products with a limited warranty of product quality and a limited indemnification of customers against intellectual property infringement claims related to the Company s products. The Company accrues for known warranty and indemnification issues if a loss is probable and can be reasonably estimated, and accrues for estimated incurred but unidentified issues based on historical activity. As of December 26, 2009 and December 27, 2008, the Company had warranty reserves of $1.6 million and $1.3 million, respectively. For the fiscal years 2009, 2008 and 2007 warranty expense was approximately $1.2 million, $1.5 million and $0.6 million, respectively.

Asset Retirement Obligations

The Company recorded asset retirement obligations (ARO) liabilities of $0.9 million at December 26, 2009 and December 27, 2008, which represents the legal obligations associated with retirement of their assets when the timing and/or method of settling the obligation are conditional on a future event that may or may not be within the control of the Company. The Company also recorded accumulated depreciation charges of $0.5 million and $0.5 million, at December 26, 2009 and December 27, 2008, respectively, which represents the cumulative amortization of the capitalized long-lived asset associated with this obligation. The Company estimated the ARO using a discounted cash flow model that considered the Company s cost of capital as well as increases in costs prior to settlement of the obligations and considered the probability that performance would be required.

	2009
Asset retirement obligation as of December 27, 2008	$ 866,965
Additions liabilities incurred	
Payment to settle liabilities	
Accretion	36,168
Asset retirement obligation as of December 26, 2009	$ 903,133

Income Taxes

The consolidated financial statements reflect provisions for federal, state, local and foreign income taxes. The Company recognizes deferred tax assets and liabilities for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax basis, as well as operating loss and tax credit carryforwards. The Company measures deferred tax assets and liabilities using enacted tax rates expected to apply to taxable income in the years in which those temporary differences and carryforwards are expected to be recovered or settled. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in income in the period that includes the enactment date. The Company provides valuation allowances if, based on the weight of available evidence, it is more likely than not that some or all of the deferred tax assets will not be realized.

Foreign Currency

Assets and liabilities of non-U.S. operations where the functional currency is other than the U.S. dollar are translated from the functional currency into U.S. dollars at year end exchange rates, and revenues and expenses at

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

average rates prevailing during the year. Resulting translation adjustments are accumulated as part of accumulated other comprehensive income. Transaction gains or losses are recognized in income or loss in the period in which they occur.

Net Income (Loss) Per Share

Basic net income (loss) per share is computed using the weighted average number of shares of common stock outstanding during the period less any unvested restricted shares. Diluted earnings per common share is calculated using weighted-average shares outstanding and contingently issuable shares, less weighted-average shares reacquired during the period. The net outstanding shares are adjusted for the dilutive effect of shares issuable upon the assumed conversion of the Company s common stock equivalents, which consist of outstanding stock options and unvested restricted stock units.

Weighted average common shares outstanding used to calculate earnings per share, is as follows:

	2009	2008	2007
Weighted average common shares outstanding basic	66,849,890	67,876,385	67,543,957
Stock options and nonvested restricted common stock	607,861	287,374	
Weighted average common shares outstanding diluted	67,457,751	68,163,759	67,543,957

The following were not included in weighted average common shares outstanding- diluted because they are anti-dilutive.

	2009	2008	2007
Nonvested restricted common stock	419,213	886,324	578,512
Stock options	3,953,387	5,823,032	6,858,322
Total	4,372,600	6,709,356	7,436,834

Concentration of Credit Risk

The Company primarily invests its excess cash in government backed and corporate financial instruments management believes to be of high credit worthiness, which bear lower levels of relative credit risk. The Company relies on rating agencies to ascertain the credit worthiness of its marketable securities and, where applicable, guarantees by the Federal Deposit Insurance Company. The Company sells its products to customers worldwide and generally does not require collateral. The Company maintains a reserve for potential credit losses.

Fair Value of Financial Instruments

Financial instruments consist of current assets (except inventories, income tax receivables and prepaid assets) and certain current liabilities. Current assets (excluding marketable securities which are recorded at fair value) and current liabilities are carried at cost, which approximates fair value.

Stock-Based Compensation

The fair value of stock option awards is estimated on the date of grant using the Black-Scholes-Merton option-pricing model. There were no stock options granted in fiscal years 2009, 2008 or 2007. The fair value of nonvested restricted common stock awards is generally the market

value of the Company s equity shares on the

Table of Contents

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

date of grant. The nonvested restricted common stock awards require the employee to fulfill certain obligations, including remaining employed by the Company for one, two or four years (the vesting period) and in certain cases also meeting performance criteria. The performance criteria primarily consist of the achievement of the Company s annual incentive plan goals. For nonvested restricted common stock awards which solely require the recipient to remain employed with the Company, the stock compensation expense is amortized over the anticipated service period. For nonvested restricted common stock awards which require the achievement of performance criteria, the Company reviews the probability of achieving the performance goals on a periodic basis. If the Company determines that it is probable that the performance criteria will be achieved, the amount of compensation cost derived for the performance goal is amortized over the service period. If the performance criteria are not met, no compensation cost is recognized and any previously recognized compensation cost is reversed. The Company recognizes compensation costs on a straight-line basis over the requisite service period for time vested awards. For awards that vest based on performance conditions, the Company uses the accelerated model for graded vesting awards.

Comprehensive Income (Loss)

Comprehensive income (loss) is the total of net income (loss) and all other non-owner changes in equity including such items as unrealized holding gains (losses) on marketable equity and debt securities classified as available-for-sale and foreign currency translation adjustments.

The components of accumulated other comprehensive income (loss) is as follows:

	Cumulative Translation Adjustment	Unrealized Holding (Loss) Gain on Marketable Securities	Non-Credit Related Losses on Investments	Accumulated Other Comprehensive Income (Loss)
Balance as of December 30, 2006	$ 3,679,146	$ (734,048)	$	$ 2,945,098
Changes during year	289,826	532,332		822,158
Balance as of December 29, 2007	3,968,972	(201,716)		3,767,256
Changes during year	(4,735,054)	799,495		(3,935,559)
Balance as of December 27, 2008	(766,082)	597,779		(168,303)
Changes during year	1,320,443	4,442,850	(1,038,177)	4,725,116
Balance as of December 26, 2009	$ 554,361	$ 5,040,629	$ (1,038,177)	$ 4,556,813

Impairment Charge

The Company periodically reviews the carrying value of our long-lived assets to determine if facts and circumstances suggest that they may be impaired or that the amortization or depreciation period may need to be changed. The carrying value of a long-lived asset is considered impaired when the anticipated identifiable undiscounted cash flows from such asset are less than its carrying value. For assets that are to be held and used, impairment is measured based upon the amount by which the carrying amount of the asset exceeds its fair value. The carrying value of the Company s long-lived assets was $20.7 million at December 26, 2009.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Recently Adopted Accounting Pronouncements

Business Combinations

In December 2007, the FASB issued amendments to ASC 805-*Business Combinations (* ASC 805), which established principles and requirements for the acquirer of a business to recognize and measure in its financial statements the identifiable assets (including in-process research and development and defensive assets) acquired, the liabilities assumed, and any noncontrolling interest in the acquiree. The amendments to ASC 805 were effective for financial statements issued for fiscal years beginning after December 15, 2008. Prior to the adoption of these new principles, in-process research and development costs were immediately expensed and acquisition costs were capitalized. Under ASC 805 all acquisition costs are expensed as incurred. The standard also provides guidance for recognizing and measuring the goodwill acquired in the business combination and determines what information to disclose to enable users of financial statements to evaluate the nature and financial effects of the business combination. The Company applied the provisions of ASC 805 in the accounting for the acquisition of the controlling interest in KTC in 2009. As a result of the adoption of these new principles, a gain was recorded on the remeasurement of the Company s previously held equity method interest in KTC.

Accounting for Noncontrolling Interests

On December 28, 2008 the Company adopted new guidance related to the presentation of noncontrolling interests in the consolidated financial statements. This guidance established accounting and reporting standards for noncontrolling interests in a subsidiary and for deconsolidation of a subsidiary.

This guidance has been applied to all periods presented herein. All previous references to minority interests in the consolidated financial statements have been changed to noncontrolling interests and are summarized as follows:

Net income includes Net income (loss) attributable to noncontrolling interests and Net income attributable to the controlling interest in the Consolidated Statements of Operations. No change was required to the presentation of net income (loss) per share.

The Consolidated Balance Sheets present Noncontrolling interests as a component of Total equity. Noncontrolling interests is equivalent to the previously reported Minority interest. Total Kopin Corporation stockholders equity is equivalent to the previously reported Total stockholders equity.

Comprehensive income (loss) includes Comprehensive income (loss) attributable to noncontrolling interests and Comprehensive income (loss) attributable to the controlling interest and is included in the Consolidated Statements of Stockholders Equity. Comprehensive income (loss) attributable to the controlling interest is equivalent to the previously reported Comprehensive income (loss).

Other-Than-Temporary Impairments

In 2009, the FASB issued guidance related to the recognition and presentation of other-than-temporary impairments (OTTI), which was adopted by the Company in the second quarter of 2009. This guidance requires the Company to assess whether OTTI is present when the fair value of a debt security is less than its amortized cost basis at the balance sheet date. Under these circumstances an other-than-temporary impairment is considered to have occurred (1) if the Company intends to sell the security; (2) if it is more likely than not the Company will be required to sell the security before recovery of its amortized cost basis; or (3) the present value of expected cash flows is not sufficient to recover the entire amortized cost basis.

This guidance further requires the Company to estimate the amount of OTTI resulting from a decline in the credit worthiness of the issuer (credit-related OTTI) and the amount of non credit-related OTTI. Noncredit-

Table of Contents

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

related OTTI can be caused by such factors as market illiquidity. Credit-related OTTI is recognized in earnings while noncredit-related OTTI on securities not expected to be sold is recognized in other comprehensive income (OCI). In accordance with the new guidance the Company reclassified $1.8 million of non credit-related OTTI recognized in its earnings prior to the second quarter of 2009, from retained earnings to accumulated OCI as a cumulative effect adjustment. This amount will be accreted to the investments over the remaining maturity periods, as an adjustment through other comprehensive income.

During the period from the beginning of the second quarter of 2009 to December 26, 2009, the Company recorded an increase to the investments and a decrease to accumulated other comprehensive income of $736,000 to reflect the accretion.

2. Property, Plant and Equipment

Property, plant and equipment consisted of the following at December 26, 2009 and December 27, 2008:

	Useful Life	2009	2008
Land		$ 825,518	$ 760,269
Buildings	10 years	4,733,651	2,135,036
Equipment	3-5 years	44,616,765	41,451,287
Leasehold improvements	Life of the lease	14,342,476	13,882,281
Furniture and fixtures	3 years	379,524	360,724
Equipment under construction		2,729,186	1,391,661
		67,627,120	59,981,258
Accumulated depreciation and amortization		(46,874,562)	(40,621,384)
		$ 20,752,558	$ 19,359,874

During fiscal 2007 the Company recognized losses on disposal of equipment of $453,000. There were no gains or losses on disposals of long-lived assets in fiscal years 2009 and 2008. Depreciation expense for the fiscal years 2009, 2008 and 2007 was approximately $5,991,000, $5,035,000 and $3,457,000 respectively.

3. Other Assets and Amounts Due To / Due From Affiliates

Other assets consist of the following as of December 26, 2009 and December 27, 2008:

	2009	2008
Marketable Equity Securities		
Micrel Inc.	$ 1,640,678	$ 1,464,892
AWSC.	$ 5,122,133	
Non-Marketable Equity Securities		
Equity Method Securities		
KTC		
KoBrite	3,298,419	3,639,638
Cost Method Securities		
AWSC		774,588
Other	193,616	181,342

	$ 10,254,846	$ 6,060,460

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Marketable Equity Securities

As of December 26, 2009 and December 27, 2008, the Company held approximately 200,000 shares of Micrel common stock with a fair market value of $1.6 million and an adjusted cost basis of approximately $1.5 million. The adjusted cost basis reflects a $0.2 million and $0.1 million other-than-temporary charge to the statement of operations to reduce the carrying value to fair market value at December 27, 2008 and December 29, 2007, respectively. This investment is considered to be an available-for-sale security and, accordingly, the investment is carried on the consolidated statement of financial position at fair market value and unrealized gains and losses resulting from the difference between its adjusted cost and fair market value are recorded in other comprehensive income

As of December 26, 2009 the Company had an investment in Advance Wireless Semiconductor Company (AWSC), with a fair market value of $5.1 million and an adjusted cost basis of $0.9 million. As of December 27, 2008, this investment was considered a cost method investment. In 2009 AWSC completed an initial public offering on a Taiwanese stock market. This investment is now classified as an available for sale marketable security and its fair market value is determined by reference to quoted market prices. One of the Company s Directors is a director of AWSC and several directors and officers of Kopin own amounts ranging from 0.1% to 0.5% of the outstanding stock of AWSC.

Non-Marketable Securities Equity Method Investments

Equity gains (losses) in unconsolidated affiliates recorded in the consolidated statement of operations are as follows:

	2009	2008	2007
KoBrite	$ (341,219)	$ (256,929)	$ (274,577)
KTC	824,276	(824,276)	
Total	$ 483,057	$ (1,081,205)	$ (274,577)

The Company has an approximate 19% interest in KoBrite at December 26, 2009. The Company accounts for its interest using the equity method and at December 26, 2009 the carrying value of the investment was $3.3 million. KoBrite s results are recorded one quarter in arrears. In June 2008, one of the Company s Directors, who is also the chairman of KTC, was elected to the Board of Directors of Bright LED, one of the principal investors of KoBrite.

At December 27, 2008, the Company had an approximate 35% interest in Kopin Taiwan Corp (KTC), and the Company recorded its interest in the results of operations of KTC under the equity method for the fiscal years ending 2008 and 2007 and for the first seven months of 2009.

On July 30, 2009, the Company purchased an additional 19,572,468 newly issued shares of KTC common stock for approximately $5,975,000, from KTC (the Transaction). The results of KTC were consolidated with the results of the Company from this date forward. On August 11, 2009, the Company also purchased an additional 128,226 shares of KTC from Microelectronics Technology Inc. (MTI), for $300,000. As a result of these two transactions and the Company s previous investments in KTC, the Company owns approximately 87% of the now outstanding common stock of KTC. The remaining 13% is held by other investors and employees of KTC.

Table of Contents

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

The total purchase price, excluding the shares purchased from MTI which were accounted for as described below, was $6,574,742, and is comprised of:

Cash consideration	$ 5,975,414
Fair market value of Kopin s previously held equity method investment in KTC	599,328
Total purchase price	$ 6,574,742

The allocation of the purchase price is as follows:

Cash and marketable securities	$ 6,251,087
Accounts receivable (net of allowance of $428,000)	1,671,298
Property, plant and equipment	3,429,339
Assets held for sale	1,564,037
Other identifiable assets	702,046
Identifiable liabilities	(5,988,414)
Noncontrolling interest in KTC	(1,054,651)
Total	$ 6,574,742

The assets held for sale is comprised of certain assets that KTC had previously agreed to sell to KoBrite.

The Company accounted for the additional 1% of KTC s equity it acquired from MTI with the purchase of the 128,226 shares for $300,000 as an equity transaction. The carrying value of this additional 1% was approximately $40,000; accordingly the $260,000 difference between the carrying value of the additional 1% equity in KTC and the amount paid was recorded as a reduction of equity of the Company.

The consolidated statement of operations for the periods includes the following amounts which were recorded as a result of the extending credit to KTC in 2008 and the Transaction in 2009:

	2009	2008
Gain on remeasurement of Kopin s previous investment in KTC	$ 599,000	$
Repayment of loan by KTC which was previously written-off	2,012,000	
Reduction (increase) in bad debt allowance	507,000	(507,000)

In the year ended December 27, 2008 the Company recorded equity losses of approximately $0.8 million and a loan loss reserve of approximately $1.2 million in connection with $2.0 million it loaned KTC in fiscal 2008. Subsequent to the Transaction the loan was repaid and in 2009 the Company recorded a gain on the loan repayment of approximately $1.2 million and equity in earnings of unconsolidated affiliates of approximately $0.8 million.

In fiscal 2008, due to KTC s liquidity problems the Company recorded allowances for possible bad debts for the excess of what KTC owed the Company over what the Company owed KTC. At December 27, 2008, the allowance for possible bad debts was approximately $0.5 million. During the nine months ended September 26, 2009 the Company reduced the allowance to $0, resulting in a reduction of selling, general and administrative expenses of approximately $0.5 million.

The Company previously recorded its investment in KTC under the equity method and had written down the investment to $0. The Company remeasured and wrote-up its investment in KTC by approximately $0.6 million which represented the fair market value of the investment immediately prior to the Transaction.

Table of Contents

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

One of the Company s Directors is chairman of KTC and owns approximately 1% of the outstanding common stock of KTC. This director is also an employee and stock holder of MTI and is a member of the Board of Directors of KoBrite.

Included in the Company s consolidated statement of operations for 2009 is $0.6 million of net income from KTC which represents KTC s results of operations from July 30, 2009, the date the Company took a controlling interest in KTC, through December 26, 2009. The following supplemental pro forma disclosures are provided for the years ended December 26, 2009 and December 27, 2008, assuming the acquisition of the controlling interest in KTC had occurred as December 30, 2007 (the first day of the Company s 2008 fiscal year). All intercompany transactions have been eliminated.

	December 26, 2009	December 27, 2008	December 29, 2007
Revenues	$ 115,114,000	$ 118,049,000	$ 102,891,000
Net income	16,629,000	4,453,000	(6,652,000)

Summarized financial information for KTC for the period ended July 31, 2009 and the years ended December 31, 2008 and 2007 and for KoBrite for the years ended September 30, 2009, 2008 and 2007 are as follows:

	2009	2008	2007
Current assets	$ 19,378,000	$ 11,746,000	$ 16,845,000
Non current assets	18,782,000	22,878,000	26,232,000
Current liabilities	12,487,000	7,986,000	8,896,000
Non current liabilities			615,000
Revenues	13,573,000	14,611,000	13,744,000
Margin (loss) income	(389,000)	(1,024,000)	1,007,000
Loss from operations	(2,793,000)	(4,340,000)	(1,602,000)
Net loss	$ (2,410,000)	$ (4,651,000)	$ (1,900,000)

On October 3, 2008 all of the outstanding common stock and assets of Kenet were sold for approximately $21.6 million, net of $2.4 million which was withheld in escrow subject to certain closing conditions (Net Proceeds). In conjunction with the transaction Kopin recorded a loss of $2.7 million in fiscal year 2008. The acquisition agreement also provides for former shareholders of Kenet to earn up to an additional $14.0 million based on the sales of Kenet products during the period from January 3, 2009 until July 3, 2010 (Contingent Consideration). No Contingent Consideration was earned during fiscal year 2009. We will record any additional amounts to be received from the escrow or Contingent Consideration when such amounts have been agreed to by the parties to the Kenet sale.

Amounts Due from and Due to Affiliates

Receivables from related parties at December 26, 2009 and December 27, 2008 approximate the following amounts:

	December 26, 2009	December 27, 2008
Advanced Wireless Semiconductor	$ 2,885,000	$ 1,821,000
KTC		993,000
KoBrite	105,000	
Accounts receivable from unconsolidated affiliates	$ 2,990,000	$ 2,814,000

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

The Company has a non-trade receivable from KoBrite of $453,000, shown in prepaid expenses and other current assets.

The table below shows amounts sold by the Company (revenues), and amounts purchased by the Company (purchases) from the indicated affiliate:

	2009		2008		2007	
	Revenues	Purchases	Revenues	Purchases	Revenues	Purchases
Advanced Wireless Semiconductor	$ 8,641,000	$	$ 12,461,000	$	$ 7,341,000	$
KTC			2,000	3,872,000	3,000	4,490,000
Total	$ 8,641,000	$	$ 12,463,000	$ 3,872,000	$ 7,344,000	$ 4,490,000

The Company has a loan to a non-officer employee for approximately $140,000 at December 26, 2009, which is currently due.

In fiscal year 2008 the Company entered into an agreement wherein it agreed to sell certain of its patents that it was no longer using to a third party who would attempt to sub-license the patents. Under the terms of the agreement the amount the Company would receive for the sale of the patents was a percentage of any license fees, after expenses, from the sublicense. In 2009, the Company recorded $6.3 million, respectively, of license fees from the sale of these patents.

4. Financial Instruments

Fair Value Measurements

Financial instruments are categorized as either Level 1, Level 2 or Level 3 based upon the method by which their fair value is computed. An investment is categorized as Level 1 when its fair value is based on unadjusted quoted prices in active markets for identical assets that the Company has the ability to access at the measurement date. An investment is categorized as Level 2 if its fair market value is based on quoted market prices for similar assets in active markets, quoted prices for identical or similar assets in markets that are not active, based on observable inputs such as interest rates, yield curves, or derived from or corroborated by observable market data by correlation or other means. An investment is categorized as Level 3 if its fair value is based on assumptions developed by the Company about what a market participant would use in pricing the assets.

The following table details the fair value measurements within the fair value hierarchy of the Company s financial assets:

		Fair Value Measurement at December 26, 2009 Using:		
		Level 1	Level 2	Level 3
Money Markets and Cash Equivalents	$ 54,832,744	$ 54,832,744	$	$
U.S. Government Securities	29,789,904	29,789,904		
Corporate Debt	29,923,853	2,434,824	27,489,029	
Micrel, Inc.	1,640,678	1,640,678

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

		Fair Value Measurement at December 27, 2008 Using:		
		Level 1	Level 2	Level 3
Money Markets and Cash Equivalents	$ 57,949,449	$ 57,949,449	$	$
U.S. Government Securities	25,887,362	25,887,362		
Corporate Debt	16,179,180		16,179,180	
Micrel, Inc.	1,464,892	1,464,892		
	$ 101,480,883	$ 85,301,703	$ 16,179,180	$

The corporate debt consists of floating rate notes with a maturity that is over multiple years but has interest rates which are reset every three months based on the then current three month London Interbank Offering Rate (3 month Libor). The Company determines the fair market values of these corporate debt instruments through the use of a model which incorporates the 3 month Libor, the credit default swap rate of the issuer and the bid and ask price spread of same or similar investments which are traded on several markets.

Marketable Debt Securities

Investments in available-for-sale marketable debt securities are as follows at December 26, 2009 and December 27, 2008:

	Amortized Cost		Unrealized Gains		Unrealized Losses		Fair Value	
	2009	2008	2009	2008	2009	2008	2009	2008
U.S. government and agency backed securities	$ 29,601,836	$ 25,353,439	$ 188,068	$ 533,923	$	$	$ 29,789,904	$ 25,887,362
Corporate debt	29,433,451	16,154,722	490,402	24,458			29,923,853	16,179,180
Total	$ 59,035,287	$ 41,508,161	$ 678,470	$ 558,381	$	$	$ 59,713,757	$ 42,066,542

The contractual maturity of the Company s marketable debt securities is as follows at December 26, 2009

	Less than One year	One to Five years	Greater than Five years	Total
U.S. government and agency backed securities	$ 3,511,392	$ 26,278,512	$	$ 29,789,904
Corporate debt	3,277,983	16,793,870	9,852,000	29,923,853
Total	$ 6,789,375	$ 43,072,382	$ 9,852,000	$ 59,713,757

Other-than-Temporary Impairments

The Company reviews its marketable debt securities on a quarterly basis for the presence of other-than-temporary impairment (OTTI).

If the Company determines that an OTTI has occurred it further estimates the amount of OTTI resulting from a decline in the credit worthiness of the issuer (credit-related OTTI) and the amount of non credit-related OTTI. Noncredit-related OTTI can be caused by such factors as market illiquidity. Credit-related OTTI is recognized in earnings while noncredit-related OTTI on securities not expected to be sold is recognized in other comprehensive income (OCI). The Company reclassified $1.8 million of non credit-related OTTI recognized in its earnings prior to March 29, 2009 from retained earnings to accumulated OCI as a cumulative effect adjustment when it adopted a new accounting standard in the second quarter of 2009.

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Included in Other Income and Expense is an impairment charge on investments in corporate debt instruments of $0.9 million and $1.3 million for fiscal years 2009 and 2008, respectively. No impairment charges related to corporate debt instruments were recorded in fiscal 2007.

5. Stockholders Equity and Stock-Based Compensation

In December 2008, the Company s Board of Directors authorized the repurchase of up to $15 million of the Company s common stock in open market or negotiated transactions. In 2009 the Company purchased 2,046,399 shares of its common stock for $5,299,451.

The Company has stock-based awards outstanding under several plans. The Company s 1992 Stock Option Plan, which expired on December 31, 2001, permitted the granting of stock options and authorized 15,000,000 shares of common stock (including shares issued upon exercise of options granted pursuant to the Company s 1985 Stock Option Plan). In 2001, the Company adopted a 2001 Equity Incentive Plan (the Equity Plan) and a 2001 Supplemental Equity Plan (the Supplemental Plan). The Equity Plan was approved by shareholders and the Supplemental Plan was approved by the Board of Directors of the Company. The Equity Plan, as amended, permits the granting of both nonqualified and incentive stock options and restricted stock awards. The Equity Plan authorized 7,100,000 shares of common stock, which may be issued to employees, non-employees, and members of the Board of Directors (the Board). The Supplemental Plan authorized 1,300,000 shares of common stock, which may be issued to employees and certain non-employees and only permits the issuance of nonqualified stock options and restricted common stock awards. The option price of statutory incentive stock options shall not be less than 100% of the fair market value of the stock at the date of grant, or in the case of certain statutory incentive stock options, at 110% of the fair market value at the time of the grant. The option price of nonqualified stock options is determined by the Board or Compensation Committee. Options must be exercised within a ten-year period or sooner if so specified within the option agreement. The term and vesting period for restricted stock awards and options granted under the Equity Plan and the Supplemental Plan are determined by the Board s compensation committee.

The Company has available approximately 800,000 shares of common stock available for issuance under the Company s stock award plans in excess of shares of common stock which have already been reserved for under previously issued equity awards.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Stock Options

A summary of stock option activity under the stock award plans as of December 26, 2009 and changes during the twelve month period is as follows:

	2009	
	Shares	Weighted Average Exercise Price
Balance, beginning of year	5,825,532	$ 11.68
Options granted		
Options forfeited/cancelled	(1,455,620)	14.18
Options exercised	(32,010)	3.85
Balance, end of year	4,337,902	$ 10.90
Exercisable, end of year	4,337,902	

The following table summarizes information about stock options outstanding and exercisable at December 26, 2009:

	Options Outstanding			Options Exercisable	
Range of Exercise Prices	Number Outstanding	Weighted Average Remaining Contractual Life (Years)	Weighted Average Exercise Price	Number Exercisable	Weighted Average Exercise Price
$ 0.01 $ 3.55	132,500	5.98	$ 3.42	132,500	$ 3.42
$ 3.75 $ 4.97	1,137,145	3.59	4.45	1,137,145	4.45
$ 5.00 $ 9.95	1,108,001	3.18	6.01	1,108,001	6.01
$10.00 $13.00	1,097,912	1.77	11.57	1,097,912	11.57
$14.31 $44.88	862,344	1.12	25.99	862,344	25.99
	4,337,902	2.60	$ 10.90	4,337,902	$ 10.90
Aggregate intrinsic value on December 26, 2009	$ 242,293			$ 242,293	

No stock options were issued in 2009, 2008 or 2007. The intrinsic value of options exercised in 2009, 2008 and 2007 was approximately $81,000, $7,000 and $87,000, respectively.

Cash received from option exercises under all share-based payment arrangements was approximately $0.1 million and $0.1 million for fiscal years 2009 and 2008, respectively. No tax benefits were realized during this period due to the existence of tax net operating loss carryforwards.

Table of Contents

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

NonVested Restricted Common Stock

The Company has issued shares of nonvested restricted common stock to certain employees. Each award requires the employee to fulfill certain obligations, including remaining employed by the Company for one, two or four years (the vesting period) and in certain cases also meeting performance criteria. A summary of the activity for nonvested restricted common stock awards as of December 26, 2009 and changes during the twelve months then ended is presented below:

	Shares	Weighted Average Grant Fair Value
Balance December 27, 2008	1,274,515	$ 2.65
Granted	1,645,939	3.36
Forfeited	(253,684)	1.94
Vested	(555,604)	2.72
Balance, December 26, 2009	2,111,166	$ 3.27

The forfeitures in 2009 were primarily due to fact that the performance criteria were not met related to these awards.

Stock-Based Compensation

The following table summarizes stock-based compensation expense related to employee stock options and nonvested restricted common stock awards for the fiscal years 2008, 2007 and 2006 (no tax benefits were recognized):

	2009	2008	2007
Cost of product revenues	$ 475,461	$ 715,056	$ 581,808
Research and development	231,890	441,080	244,598
Selling, general and administrative	1,176,989	1,584,713	1,428,150
Total	$ 1,884,340	$ 2,740,849	$ 2,254,556

Total unrecognized compensation expense for the nonvested restricted common stock as of December 26, 2009 totals $4,480,000 million and is expected to be recognized over a period of 2 years.

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

6. Concentrations of Risk

Financial instruments that potentially subject the Company to concentration of credit risk other than marketable securities consist principally of trade accounts receivable. Trade receivables are primarily derived from sales to manufacturers of consumer electronic devices and wireless components or military applications. Ongoing credit evaluations of customers financial condition are performed and collateral, such as letters of credit, are generally not required. The following table depicts the customer s trade receivable balance as a percentage of gross trade receivables as of the end of the year indicated: (The symbol * indicates that the customer s accounts receivable balance was less than 10% of the Company s Gross Accounts Receivables):

Customer	Percent of Gross Accounts Receivable 2009	2008
Skyworks Solutions, Inc.	13%	14%
Advanced Wireless Semiconductor Co.	15	11
DRS Technologies	13	19
Raytheon Company	14	*
QiOptiq	*	12

Sales to significant non-affiliated customers, for fiscal years 2009, 2008 and 2007, as a percentage of total revenues is shown in the table below. Note the caption Military Customers in Total in the table below includes Raytheon, DRS Technologies and QiOptic, but excludes research and development contracts. (The symbol * indicates that sales to that customer were less than 10% of the Company s total revenues.)

Customer	Sales as a Percent of Total Revenue Fiscal Year 2009	2008	2007
Skyworks Solutions, Inc.	20%	20%	26%
Advanced Wireless Semiconductor Company	8	9	5
Military Customers in Total	45	32	16
United States Government Funded Research and Development Contracts	6	6	4
DRS Technologies	19	19	*
Raytheon Company	14	*	*
QiOptic	*	*	*
Sanyo Electric Co, Ltd.	*	*	16

Skyworks Solutions, Inc. (Skyworks Solutions) also uses the foundry services of Advanced Wireless Semiconductor Company (AWSC) to process the Company s HBT transistor wafers on their behalf. The Company sells HBT transistor wafers directly to AWSC for eventual resale by AWSC to Skyworks Solutions. AWSC also purchases HBT transistor wafers from the Company for the processing and sale to other customers. The Company does not know exactly how many HBT transistor wafers sold to AWSC are for eventual delivery to Skyworks Solutions but believes the sales to Skyworks Solutions and AWSC should be aggregated for purposes of assessing the concentration of risk.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

7. Income Taxes

The provision (benefit) for income taxes consists of the following for the fiscal years indicated:

	Fiscal Year		
	2009	2008	2007
Current			
Federal	$ 251,000	$ 181,000	$
State	468,000	158,000	43,000
Foreign	(29,000)	453,000	422,000
Deferred			
Federal	6,532,000	736,000	(1,756,000)
State	1,414,000	1,627,000	(469,000)
Foreign	(100,000)	364,000	(10,000)
Change in valuation allowance	(7,846,000)	(2,727,000)	2,235,000
	$ 690,000	$ 792,000	$ 465,000

Net operating losses utilized in 2009 and 2008 to offset federal and state taxes were $6,923,000 and $3,527,000, respectively.

The actual income tax provision (benefit) reported from operations are different than those which would have been computed by applying the federal statutory tax rate to loss before income tax benefit. A reconciliation of income tax benefit as computed at the U.S. federal statutory income tax rate to the provision for income tax benefit is as follows:

	Fiscal Year		
	2009	2008	2007
Tax provision (benefit) at U.S. statutory rates	$ 6,817,000	$ 1,127,000	$ (1,926,000)
State tax liability (benefit)	1,718,000	1,730,000	(441,000)
Foreign tax rate difference	10,000	(228,000)	(259,000)
Nondeductible expenses	(40,000)	56,000	4,000
Utilized/expired net state operating loss carryforwards	(134,000)	(862,000)	990,000
Provision to tax return adjustments and state tax rate change	(1,432,000)	1,039,000	(1,845,000)
(Increase) Reduction of credits	(636,000)	(348,000)	686,000
Non-deductible equity compensation	3,882,000	1,272,000	1,021,000
Other, net	(1,649,000)	(267,000)	
Change in valuation allowance	(7,846,000)	(2,727,000)	2,235,000
	$ 690,000	$ 792,000	$ 465,000

Pretax foreign (losses) earnings were approximately ($401,000), $3,669,000 and $1,946,000 for the fiscal years 2009, 2008 and 2007, respectively. The Company has not received any remittance of any earnings from its foreign operations nor does it intend to in the foreseeable future. Accordingly, U.S. income taxes were not provided for approximately $10.1 million of undistributed earnings of the Company s Korean subsidiary and $0.6 million of undistributed earnings of the Company s Taiwan subsidiary.

71

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Deferred taxes are provided to recognize the effect of temporary differences between tax and financial reporting. Deferred income tax assets and liabilities consist of the following:

	Fiscal Year	
	2009	**2008**
Deferred tax assets:		
Federal net operating loss carryforwards	$ 10,212,000	$ 15,662,000
State net operating loss carryforwards	28,000	162,000
Equity awards	4,025,000	7,183,000
Tax credits	4,176,000	3,820,000
Equipment	4,034,000	3,540,000
Investments	9,271,000	5,550,000
Other	4,658,000	8,333,000
Net deferred tax assets	36,404,000	44,250,000
Valuation allowance	(36,404,000)	(44,250,000)
	$	$

As of December 26, 2009, the Company has available for tax purposes federal net operating loss carryforwards (NOLs) of $29.2 million expiring through 2029. The Company has recognized a full valuation allowance on its net deferred tax assets due to the uncertainty of realization of such assets. The change in the valuation allowance during 2009 was due to a decrease in deferred tax assets of $2.2 million and the utilization and provision to tax return adjustments related to NOLs of $5.6 million.

The Company has not historically recorded, nor does it intend to record the tax benefits from stock awards until realized. Unrecorded benefits from stock awards approximated $12.1 million at December 26, 2009.

The Company s Income Tax returns have not been examined by the Internal Revenue Service (the IRS) and are subject to examination for all years since 1993. State income tax returns are generally subject to examination for a period of 3 to 5 years after filing of the respective return. The state impact of any federal changes remains subject to examination by various states for a period of up to one year after formal notification to the states.

International jurisdictions have statutes of limitations generally ranging from 3 to 7 years after filing of the respective return. Years still open to examination by tax authorities in major jurisdictions include Korea (2004 onward), Japan (2004 onward), Hong Kong (2006 onward) and Taiwan (2008 onward, as their government has concluded audits through 2007). The Company is not currently under examination in these jurisdictions.

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

8. Accrued Warranty

The Company warrants its products against defect for 12 months. A provision for estimated future costs and estimated returns for credit relating to warranty is recorded in the period when product is shipped and revenue recognized, and is updated as additional information becomes available. The Company s estimate of future costs to satisfy warranty obligations is based primarily on historical warranty expense experienced and a provision for potential future product failures. Changes in the accrued warranty for fiscal years 2009 and 2008 are as follows:

	Fiscal Year Ended	
	December 26, 2009	December 27, 2008
Beginning Balance	$ 1,250,000	$ 1,030,000
Additions	1,530,000	1,720,000
Claim and reversals	(1,180,000)	(1,500,000)
Ending Balance	$ 1,600,000	$ 1,250,000

9. Employee Benefit Plan

The Company has an employee benefit plan pursuant to Section 401(k) of the Internal Revenue Code of 1986, as amended. The plan allows employees to defer an amount of their annual compensation up to a current maximum of $15,500 if they are under the age of 50 and $22,000 if they are over the age of 50. The Company matches 50% of all deferred compensation up to a maximum of 3% of each employee s annual compensation. The amount charged to operations in connection with this plan was approximately $200,000, $192,000 and $209,000 in fiscal years 2009, 2008 and 2007, respectively.

10. Commitments and Contingencies

Leases

The Company leases facilities located in Taunton and Westborough, Massachusetts, and Scotts Valley, California, under non-cancelable operating leases. The Taunton leases expire in 2012 and 2020. The Westborough lease expires in 2012. The Scotts Valley lease terminates in 2012. Substantially all real estate taxes, insurance and maintenance expenses under these leases are the Company s obligations and are expensed as incurred and were immaterial. The following is a schedule of minimum rental commitments under non-cancelable operating leases at December 26, 2009:

Fiscal Year ending,	Amount
2010	1,471,000
2011	1,494,000
2012	892,000
2013	461,000
2014	461,000
Thereafter	2,999,000
Total minimum lease payments	$ 7,778,000

Amounts incurred under operating leases are recorded as rent expense on a straight line basis and aggregated approximately $1.5 million in fiscal years 2009, 2008, and 2007.

Table of Contents

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Other Agreements

The Company has entered into various license agreements which require payment of royalties based upon a set percentage of product sales, subject in some cases, to certain minimum amounts. Total royalty expense approximated $20,000, $20,000 and $15,000, respectively, in fiscal years 2009, 2008 and 2007.

The Company has a purchase and supply agreement with a significant HBT customer that expires in July 2010, excluding a last time buy option contained in the agreement. Under the terms of this agreement, the Company agreed to maintain capacity levels for manufacturing HBT wafers and the Company committed to a pricing schedule under certain circumstances. The agreement also requires the Company to give prior notice if the Company exits its HBT product line. In consideration for this agreement the customer agreed to source 100% of its HBT wafer needs from the Company subject to the customer s right to source HBT wafers from other sources if the Company is unable to meet their requirements under certain circumstances. The Company agreed that failure to meet its supply obligations under the agreement would allow the Company s customer to obtain court ordered specific performance and if the Company does not perform it could then be liable for monetary damages up to a maximum of $40.0 million. To date the Company has met its commitments under this agreement.

Included in Billings in excess of revenue earned is $2.8 million which was received in 2008 from a state grant. Amounts from this grant are earned by achieving certain employment levels and other conditions through 2017. In the event the Company does not achieve these employment levels some or all of the $2.8 million will be refunded.

11. Litigation

The Company is engaged in legal proceedings arising in the ordinary course of business. On August 14, 2009, a complaint was filed against us and certain of our officers and directors in Massachusetts Superior Court in Bristol County, asserting that the defendants breached fiduciary duties in connection with the issuance of proxy statements, which allegedly contained false and misleading statements concerning certain of our past stock option grants. We served the plaintiff a motion to dismiss on October 27, 2009, and we are in the process of selecting a date for oral argument in this matter. Claims, suits, investigations and proceedings are inherently uncertain and it is not possible to predict the ultimate outcome of the matters previously discussed. While the Company will continue to defend itself vigorously in all such matters, it is possible that the Company s business, financial condition, results of operations or cash flows could be affected in any particular period by the resolution of one or more of these matters.

12. Segments and Geographical Information

The Company s chief operating decision maker is its Chief Executive Officer. The Company s chief operating decision maker evaluates the operating results of the Company s reportable segments based on revenues and net income (loss).

Table of Contents

KOPIN CORPORATION

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Continued)

Effective as of July 31, 2009, when the Company obtained a controlling interest in KTC, KTC is now a reportable segment. The Company has three operating and reportable segments: i) Kopin US, which includes the operations in the United States and the Company s equity method investments, ii) Kowon and iii) KTC (commencing in 2009). The following table presents the Company s reportable segment results for the years ended 2009, 2008 and 2007:

	Kopin U.S.	Kowon	KTC	Adjustments	Total
2009					
Revenues	$ 113,183,000	$ 8,644,000	$ 3,346,000	$ (10,518,000)	$ 114,655,000
Net income (loss) attributable to the controlling interest	19,642,000	(1,095,000)	723,000	173,000	19,443,000
Total assets	168,603,000	19,316,000	9,691,000	(14,386,000)	183,224,000
Long lived assets	13,906,000	2,969,000	3,882,000	(4,000)	20,753,000
2008					
Revenues	$ 109,236,000	$ 20,570,000	$	$ (15,000,000)	$ 114,806,000
Net income (loss) attributable to the controlling interest	55,000	3,214,000		(683,000)	2,586,000
Total assets	147,276,000	19,213,000		(6,812,000)	159,677,000
Long lived assets	16,523,000	2,841,000		(4,000)	19,360,000
2007					
Revenues	$ 92,621,000	$ 34,378,000	$	$ (28,850,000)	$ 98,149,000
Net (loss) income attributable to the controlling interest	(7,767,000)	1,523,000		(312,000)	(6,556,000)
Total assets	147,400,000	40,823,000		(27,169,000)	161,054,000
Long lived assets	17,972,000	3,959,000		(4,000)	21,927,000

The adjustments to reconcile to the consolidated financial statement total revenue, net (loss) income and total assets include the elimination of intercompany sales and intercompany receivables and the recording of the noncontrolling interest in Kowon and KTC.

Geographical revenue information for the three years ended December 26, 2009, December 27, 2008 and December 29, 2007 was based on the location of the customers and is as follows:

	Fiscal Year					
	2009		2008		2007	
	Revenue	% of Total	Revenue	% of Total	Revenue	% of Total
Asia-Pacific	$ 19,822,000	17%	$ 33,584,000	29%	$ 40,451,000	41%
Americas	94,833,000	83%	81,222,000	71%	57,698,000	59%
	$ 114,655,000	100%	$ 114,806,000	100%	$ 98,149,000	100%

13. Selected Quarterly Financial Information (Unaudited)

The following tables present Kopin s quarterly operating results for the fiscal years ended December 26, 2009 and December 27, 2008. The information for each of these quarters is unaudited and has been prepared on the same basis as the audited consolidated financial statements. In the opinion of management, all necessary adjustments, consisting only of normal recurring adjustments, have been included to present fairly the unaudited consolidated quarterly results when read in conjunction with Kopin s audited consolidated financial statements and related notes. These operating results are not necessarily indicative of the results of any future period.

Quarterly Periods During Fiscal Year Ended December 26, 2009:

	Three months ended March 28 2009	Three months ended June 27 2009	Three months ended September 26 2009(3)	Three months ended December 26, 2009
	(In thousands, except per share data)			
Revenue	$ 21,476	$ 28,229	$ 31,979	$ 32,971
Gross profit(2)	5,977	6,719	9,986	9,454
Net income (loss) attributable to the controlling interest(4)	$ 1,916	$ 3,681	$ 8,514	$ 5,333
Net income (loss) per share(1):				
Basic	$ 0.03	$ 0.06	$ 0.13	$ 0.08
Diluted	$ 0.03	$ 0.05	$ 0.13	$ 0.08
Shares used in computing net income (loss) per share:				
Basic	68,153	66,704	66,214	66,328
Diluted	68,525	67,550	67,029	67,129

(1) Net income (loss) per share is computed independently for each of the quarters presented; accordingly, the sum of the quarterly net income per share may not equal the total computed for the year.
(2) Gross profit is defined as net product revenue less cost of product revenues.
