## CHIEF EXECUTIVE'S REVIEW

In this, my first report to Harmony shareholders as Chief Executive Officer, I would firstly like to thank the selection panel and

the board of directors for their confidence in my leadership to take Harmony forward and I look forward to working closely

with them in the years ahead.

Harmony will continue to focus on creating shareholder value and, over time, to out-perform the market. One of my priorities for

the company is to outline a long-term strategy. Harmony has in the past few years been focusing on organic growth and these

projects are now mines under construction, most building up in production from now to 2010. All of these mines will have longer

life with generally higher grades. These production units are larger and we will be expecting more consistent results, both in tonnes

and grade. These long life mines, together with those already in production, will be the core of Harmony in the future. They make

up the bulk of Harmony's reserves and will have lower cash costs.

Management time will continue to be focused on striving to achieve desired returns by reducing the planning gap and continually reviewing to squeeze the best from the orebodies. Some short life assets will remain within the Harmony stable,

operations which under certain circumstances, possibly with a capital injection, could have their lives vastly extended. These

assets will continue to have high cash cost, however, at today's high gold prices these assets could deliver significant profits.

Management will endeavour to explore ways and means of obtaining good value for shareholders from these assets by investigating ways of recapitalising them.

Harmony is thus moving to a producer with a higher focus on quality. Our aspirations are to have sustainable growth, a culture

of achievement, a buoyant and rising stock price, to be a responsible corporate citizen, have professional business practice and

have inspired, enthusiastic and competent employees.

Turning to the second quarter's financial results for the period ended 31 December 2007, I draw your attention to changes

made to this quarter's reporting format. The previous structure of quality, growth, leverage and international assets has been

replaced with South African underground, surface and international assets. We believe that it had become essential to re-assess

our company structure as four of our projects have begun to contribute to turnover and as Harmony begins its transformation

to a quality producer.

In addition to the company structure changes, and in accordance with the new accounting regulations, we highlight the fact

that four of Harmony's operations, Orkney shafts 1 – 7, St Helena, Cooke shafts and plant in Randfontein, and Mt Magnet and

South Kal in Australia, are now being reported as discontinued operations in the income statement.

The company's operational results for the second quarter 2008 were negatively affected by the 44 days of stoppage time at

Elandsrand after a shaft incident, in order to carry out the investigation into the mine incident of 3 October 2007.

Elandsrand

accounted for 67.1% or 1 177 kg loss of production in the December quarter. The one-day national strike called by the National

Union of Mineworkers in support of safety also impacted on production. However, both the Elandsrand accident and the one-day strike has resulted in increased safety focus and we are hopeful that this will result in positive safety behaviour and a renewed safety effort from all Harmony employees.

Harmony's total production for its underground continuing operations decreased by 1.3% to 4 445 000 tonnes resulting in an 8.3% decrease in kilograms produced to 12 403 kg and a 3.9% drop in grade to 4.87g/t. Cash operating costs remained almost unchanged at R133 234/kg.

The gold price received at R169 502/kg was 8.5% higher than the September quarter but the Rand/US dollar exchange rate was 4.7% stronger at 677 cents. Harmony's operating profit from continuing operations improved 43.0% to R449.8 million. Capital expenditure increased during the quarter under review to R808 million, this is mainly due to the ramp up in expenditure at Hidden Valley in Papua New Guinea.

The benefits of Harmony's intensive cost control measures that commenced early in October 2007 will only materialise in the next half of the financial year. Measures implemented included the termination of 2 827 external contractors and the voluntary retrenchments and natural attrition of 2 123 and transfer to more efficient shafts of 4 859 employees. The transfers were mainly service staff from Randfontein central offices and from non-productive to productive areas.

P  
3

St Helena Nos. 4 and 8 shafts were placed on care and maintenance and its 650 employees have been redeployed at other Harmony operations. The transfer of the centralised staff at Randfontein to the operations is part of the company's decentralisation process to compel operations to take ownership of their costs. Our total complement now stands at 43 800 employees and 5 700 contractors compared with 47 431 employees and 7 019 contractors at 30 June 2007. During the quarter, the internal due diligences on the effectiveness of the continuous mining (Conops) method were completed at the Tshepong, Elandsrand, Masimong, Evander No. 8 and Winkelhaak shafts, as well as Cooke 2 operations. These operations and Target are the only Harmony shafts that operate on Conops. The review revealed that Conops was not an effective mining method at Masimong and it has subsequently been terminated and the majority of the workforce transferred to Phakisa. Conops will be reviewed continually and it is our intention to phase out Conops at those operations that do not deliver on our objectives. The costs savings drive have had effects of positively decreasing the working cost from R1 798 million to R1 652 million and hence despite producing less gold (mainly due to the Elandsrand accident) the cash cost remained virtually unchanged. All conditions precedent relating to South Kal disposal were met on 30 November 2007, with Dioro Exploration NL taking over operations on that date and the purchase price of A\$25 million cash paid and A\$20 million of shares issued to Harmony. Harmony also signed the sales contract with Australian-based junior miner Monarch Gold Mining Company Limited for the sale of Mount Magnet. The Mount Magnet operations completed mining during December 2007 and consequently the last tonnages for Harmony's account from this operation have been milled in January 2008. Harmony believes that partnerships may be one of the primary vehicles through which we will enhance our growth strategy in the south-east Asian region. We are thus pursuing alliances with interested parties with technical mining skills and capital to equally share the Hidden Valley Gold and Silver Mine, the Wafi/Golpu projects and the extensive exploration licenses in Papua New Guinea. We will only consider transactions that are of good value to Harmony's shareholders. To this end, we have progressed to a shortlist of leading international mining companies with whom we are in discussions. We are confident that we will be in a position to finalise this process in April 2008, with a partner to be introduced thereafter. This new partnership will build on the excellent relationships Harmony enjoys with the local government and contribute significantly to the domestic economic growth. Shareholders were advised on 19 December 2007 that a significant decision had been made with regard to the future of Harmony's Cooke shafts and its uranium assets in the Randfontein area. Several proposals from interested parties were considered but only the offer from Pamodzi Resources Fund was in line with Harmony's strategy of realising value for its shareholders. In essence, the signed agreement proposes that certain uranium and gold assets of the Randfontein Cooke Section be sold into a new company (Newco). The purchase price payable by the still to be named Newco for these assets amounts to

US\$420 million. In addition, Pamodzi Resources Fund will acquire a 60% shareholding in Newco from Investco, the subsidiary of ArmGold/Harmony Joint Investment Company, for a purchase consideration of US\$252 million, with Harmony retaining a 40% shareholding in Newco.

Both parties are currently in the process of meeting conditions precedent and we are confident that these will be completed by 31 March 2008. A new dedicated executive management team will assume responsibility for developing the project and we will soon be appointing a chief executive officer to manage Newco. The revenues from the Randfontein Cooke shafts will be equity accounted and the profit from associates will be reflected in the income statement.

In the light of Eskom's electricity supply disruptions and with mines operating only at 90% of Harmony's previous power

supply, the company's production for the March 2008 quarter could decrease.

Harmony's management is devising new strategies on optimising operations to produce at 90% of electricity to ensure that we deliver returns on our shareholders' investments.

P

4

SAFETY AND HEALTH REPORT

Six mines in the Free State achieve 500 000 fatality free shifts

Two Harmony mines achieve one million fatality free shifts

Fatality injury rate (per million hours worked)

Group Safety

Harmony experienced a sharp regression of 62% in its Fatality Injury Frequency Rate (FIFR) for the second quarter ended

31 December 2007.

The Lost Time Injury Frequency Rate (LTIF) rate for the South African operations improved during the quarter from a rate of

14.26 to 12.64 for the second quarter of financial year 2008 an improvement of 11.4%. The Reportable Injury Frequency Rate

(RIFR) also improved from 7.53 in 2007 to 6.63 for the first quarter of 2008, showing an improvement of 12.0%.

Eight employees regrettably lost their lives during the course of work on Harmony's mines during the quarter under review.

One LTI and two medical treatment injuries occurred at our Hidden Valley project in Papua New Guinea.

Despite the regression in the fatality injury rate some excellent safety records were achieved. Six of Harmony's SA underground shafts, Tshepong, Bambanani, Masimong, Harmony 2 and Merriespruit 1 and 3 achieved half-a-million fatality

free shifts. Evander 8 shaft and Harmony 2 shaft achieved one million fatality free shifts during the quarter.

P

5

THE SECOND QUARTER ENDED 31 DECEMBER 2007 UNDER REVIEW

Harmony's SA underground operations, excluding the discontinued operations, delivered a steady operational performance for the second quarter of financial year 2008.

Tonnes Milled

Tonnes milled from the company's underground operations, excluding discontinued operations, decreased by 6.5% to 2 297 000 tonnes (2 457 000 tonnes). This decrease in tonnes milled is mainly attributed to Elandsrand's loss of production for the quarter. The quarter saw Bambanani and Joel mine back in production but the closure of St Helena and the restructuring at Masimong impacted negatively on the company's underground production.

Recovery Grades

Gold production dropped by 10.3% on lower recovery grade from SA underground mines but mainly due to Elandsrand's

1 177 kg loss of production. This impacted on recovery grades which fell by 3.9% when compared with the previous quarter to 4.87g/t (5.07g/t).

Cost Control

Cash operating costs were well contained with Target, Bambanani, Joel and Virginia being the main contributors. Elandsrand's

costs impacted on an otherwise cost-conscious quarter. Cash operating costs increased by 2.0% to R138 531/kg (R135 776/kg).

The performance of the company is best highlighted in the following table\*:

CAPITAL EXPENDITURE (Continuing Operations)

Harmony's capital projects are at various stages of completion. Capital expenditure at Hidden Valley reflects a sharp increase from R161 million to R275 million as development of the mine accelerates. Good progress is being made at the South African-based projects with all of the projects in production build-up mode.

Tshepong Mine

Production

The two fatalities during December 2007 impacted negatively on production volumes. Other negative contributory factors were

geological complexities, flexibility problems and difficult mining conditions due to multiple faulting.

Tshepong's incorrect mining mix of under-performance in volume from high grade areas and over-performance in low grade

areas resulted in a decrease in grade.

Rand per kilogram costs were up by 3.2% to R107 616 (R104 334) due to higher volumes mined at 388 000 tonnes (386 000 tonnes) and 143 fewer kilograms produced at 2 202 kg (2 345 kg). This resulted in a 6.6% drop in grade from 6.08g/t

to 5.68g/t.

Project overview

Sub 66 decline is currently in production build-up phase and the total project is 95% complete. An area of 4 112m<sup>2</sup>

was mined

during the quarter, an increased of 73% and reef metres developed increased by 52%. The majority of the remaining development is on 71 level.

As a result of geological complexities, additional development was required for most of the raise lines under the scope.

The 69 – 72 level main ore passes will require rehabilitation due to excessive scaling and the rehabilitation will start in the next

quarter. On 71 level, the first raise line intersected reef in December 2007.

Phakisa  
Production

In its debut production quarter Phakisa milled 6 000 tonnes and produced 18 kg of gold at 3g/t.

Volumes from the stoping operations are on target and development metres are slightly up quarter-on-quarter but below plan.

This is as a result of ventilation constraints and poor cleaning. These issues are being addressed.

Phakisa's cash operating costs should be viewed as part of its production build-up phase.

Project overview

Settlers design changed due to adverse ground conditions and 31% progress has been made to date. Blasting on No. 2 Settler

was completed during the quarter.

Phase 1 of the surface infrastructure was completed, whilst civil construction and erection of main building has commenced.

P

10

Doornkop  
Production

Grade at Doornkop was affected by lower volumes from the South Reef section due to pressure on logistics as production and shaft equipping compete. More focus will be given to shaft equipping in the third quarter to alleviate this problem. Tonnes milled decreased 3.2% to 122 000 compared with 126 000 for the previous quarter. Recovery grade dropped by 10.8% from 3.60g/t to 3.21g/t. Total cash costs were 3.7% higher at R144 360/kg as a result of the lower gold production of 392 kg (454 kg).

Project overview

Station development continues on 202, 205, 207 and 212 levels with a total of 3 364 cubic metres excavated. Access development also continued on 192 and 197 levels with 467m excavated. Secondary development is also underway on 192 and

197 levels with 636m achieved.

The shaft has been excavated to final size and lined to 212 station elevation. Equipping of the loading station on 212 level is

all that remains of the major shaft-sinking tasks and this is already underway. Construction of the pump station and loading

levels is due to start during the next quarter following the completion of these excavations on 205, 207 and 212 levels.

The

main shaft is expected to be partially commissioned in April 2008.

Elandsrand  
Production  
The Elandsrand operations were severely impaired by the incident of 2 October 2007, when a compressed air pipe fell down the shaft and damaged infrastructure, as well as by the fall of ground later in the quarter. Volumes from the operations were a mere 94 000 tonnes compared with 289 000 tonnes previously. Gold production amounted to 576 kg, a drop of 67.1% when compared with 1 753 kg for the previous quarter with a recovery grade of 6.13g/t (6.07g/t). The cost of treating the drastically reduced volumes resulted in an increase in R/kg costs of R231 705/kg (R137 315/kg).

P  
11

Project overview

The accident in the men and material shaft resulted in work being delayed by two months in various project areas.

Various

crews from the project assisted with the rehabilitation of the mine and machinery shaft.

The 92 level Turbine Dam progressed well during the quarter and at the end of December 2007 the excavation had been

completely supported and lined.

The mechanicals (pumps, pipes, etc) in the 115 level pump station should be finished by end January 2008. During the next

quarter the electrics and instrumentation will be installed. The switchgear for the 115 level sub-station was delivered and

installed. Commissioning did not occur in November 2007 and is now scheduled for February 2008.

The third 22 kV feeder from 75 to 100 level and the last 6.6 kV feeder from 109 to 115 level, were installed during the Christmas

break. The HT cable installations in the sub-shaft are 100% complete. The chambers for the 109 and 113 level mobile refrigeration plants were completed as well as the installation of the 102 level east and west bulk air coolers.

#### Target Mine

Despite persistent difficulties with truck availability and extensive damage to a loader in a fall of ground towards the end of

December, Target experienced a better quarter with a 6.7% increase in volumes from 150 000 to 160 000 tonnes. Kilograms produced were higher at 725 kg from 688 kg, notwithstanding the decline in recovery grade of 1.3% to 4.53g/t (4.59g/t).

The first new trackless fleet arrived at Target late in the quarter and more units are expected during the March 2008 quarter,

which will enhance Targets ability to move tonnes from the massive stopes. The water handling system is also being addressed

and already there is much improvement.

Total cash costs were well-contained at R109 394/kg from R131 888/kg previously, a saving of 17.1%.

#### Masimong Mine

The discontinuation of Conops at Masimong and resulting disruption of labour resulted in a decrease in tonnes.

Tonnes milled

were down by 15.8% to 203 000 from 241 000. Consequently, gold production fell 17.4% to 905 kg (1 096 kg) and recovery

grade declined 2% from 4.55g/t to 4.46g/t.

Costs of treating lower tonnes together with the decreased gold production resulted in a 3.7% increase in total cash costs of

R180 355/kg (R173 958/kg).

#### Evander Operations

Volumes mined at the Evander operations decreased by 2.7% to 362 000 tonnes (372 000 tonnes), as a result of an effort to

improve the mining mix by moving to more profitable panels.

Recovery grade remained stable at 6.01g/t (6.03g/t), but kilograms produced were down 3.0% to 2 176 kg (2 244 kgs) as a result

of lower volumes.

Cash costs increased by R5 431/kg to R116 291/kg compared with R110 860/kg for the September quarter.

A new production plan is being implemented with promising improvements in efficiencies and profitability.

#### Bambanani

Bambanani experienced a better quarter. Volumes increased by 25.6% from 238 000 to 299 000 tonnes, producing 1 595 kg

(1 275 kg) of gold on a lower yield of 5.33g/t compared with 5.36g/t, a 5.6% decline.

Cash operating cost was well-contained down by 11.2% at R141 056/kg (R158 769/kg).

#### Joel

Increased volumes and the commencement of hoisting at the North shaft resulted in improved tonnages of 99 000 tonnes

(81 000 tonnes) for the December quarter. More steady state production is expected from Joel in the coming quarters.

Gold produced increased to 455 kg (419 kg) but grade was down at 4.60 g/t (5.17 g/t) due to excessive channel widths. Costs

showed a 5.5% improvement of R154 963/kg (R163 928/kg) for the December 2007 quarter.

(R/tonne)

596

579

2.9

388

Gold produced decreased by 2.6% to 2 131 kg compared with 2 188 kg due to lower tonnes milled from 564 000 to 574 000

and a lower yield of 3.78g/t from 3.81g/t when compared with the September quarter.

Lower costs mainly from Harmony 2 and the improved production translated into lower Rand per kilogram costs of R153 154/kg (R156 390/kg) for the current quarter.

Kalgold

Kalgold experienced one of its more profitable quarters despite the abnormally high rainy conditions and electricity disruptions

which resulted in 18 production days being lost. Good plant performance and the availability of water partially mitigated the

negative factors. Tonnages milled were up by 25%, grade was 4% up due to higher feed grade from the stockpiles.

The D-zone pit is nearing the end of its life and it is likely that production from the D-Zone may cease within the next two

quarters.

Project Phoenix

Slime reclamation tonnage throughput is now averaging about 525 000 tonnes per month. Existing deposition capacity is

about three years.

Costs increased mainly on reagents.

P

16

INTERNATIONAL OPERATIONS

Hidden Valley

Project overview

The overall project schedule was maintained during the December quarter, with first gold still targeted in March 2009. Manufacturing delays with the SAG mill have been contained, with the work being closely monitored at the manufacturing site

to prevent further delays, as it remains on the project critical path to completion, together with the conveyor construction.

Project engineering is 74% complete and approximately 78% of process equipment ordered. Most of the plant platforms have

now been completed, with the main civil contractor mobilising to site in the March quarter to start plant pad preparation and construction.

Work on the permanent camp construction is progressing well, with five 40 man dormitories handed over in December. Work

on the tailings storage facility also accelerated during the quarter, with the starter dam now up to it final level over two thirds

of its length.

The Kaveroi resource drilling continued during the quarter with 5000 meters drilled. The program continues to confirm known

mineralisation at depth as well as the continuity of a previously unmodelled supergene zone at the meta-sediment/grano-

diorite contact. A preliminary geology model has been completed, with lower volumes of meta sediment to be pre stripped,

compared to the previous model. This drilling program will be completed in the March quarter.

The mining fleet continues with waste movement and the development of the Hamata open pit, with the stripping of organics

and construction of an access road to haul waste to the main dam of the tailings storage facility.

## DISCONTINUED OPERATIONS

### Orkney

Orkney has been under the management of Pamodzi Gold since September 2007.

### Australia

At the end of November, Harmony announced that the conditions required to settle the South Kal sale agreement had been finalised.

During the quarter, Harmony also announced that it had signed a sales contract with Australian-based junior miner Monarch

Gold Mining Company for the sale of its Mount Magnet Operations. Harmony mined its last tonnages in December 2007 and

milling ceased at the end of January 2008.

The Australian Operations delivered a good performance for the December 2007 quarter.

### Randfontein Operations

Shareholders were advised on 19 December 2007 that in line with Harmony's stated strategy of realising value for the uranium

assets, Randfontein Estates Limited had entered into an agreement with Pamodzi Resources Fund to sell certain of the uranium

and gold assets of Randfontein and create a new company (Newco).

The purchase price payable by Newco for Randfontein's Cooke section and old Randfontein section assets is US\$420 million.

Pamodzi Resources Fund is to acquire a 60% shareholding in Newco for a purchase price of US\$252 million, with Harmony

retaining 40% in Newco.

Turning to the quarter's operational performance, Randfontein experienced two days of production losses which led to a 4.1%

decrease in volumes from 321 000 to 308 000 tonnes. Consequently kilograms produced were down by 358 kg from 1 968 kg

to 1 610 kg due to incorrect mining mix.

Yields decreased by 14.7% to 5.23g/t from 6.13g/t due to lower recovery grades from VCR and A5 reef horizon.

Cash costs increased by 11.8% quarter on quarter to R121 625/kg from R108 816/kg.

### Cooke Plant Operations

The Cooke plant project involves mechanical reclamation of sand from the dump and hydraulic transportation to Cooke plant

where it will be milled and treated. To achieve this, a pipeline will be installed from Dump 20 to Cooke plant.

The project was approved by both Harmony and Pamodzi Resource Fund and procurement of all the equipment is currently

being done. Construction will start by April 2008 and will be completed by the end of November 2008.

During the quarter persistent rain made production difficult by hampering access to the reclamation site and thus the delivery

of sand. The quarter saw the acceleration of waste depletion and thus the decrease in recovery grade.

P

18

## EXPLORATION

Wafi/Golpu

Project overview

The Wafi Golpu pre-feasibility study was reviewed by a Harmony project team and subjected to a Competent Person's Review (CPR) by RSG Global (Australia) during the quarter.

The CPR recommended that further exploration and drilling is warranted on the identified exploration targets. A detailed

feasibility study on the Golpu Copper Project is also justified as is further mining studies at Wafi.

Exploration results and programme

The exploration potential at Wafi is considered to be very high, with gold resource definition at the Western Zone likely in the

short term. The Western Zone ore displays similar mineralogical properties to the Link Zone and definition of a resource in the area

will directly improve the overall economics of the project. The current Wafi/Golpu exploration programme and some of the recent

drill hole intercepts also has the potential to significantly change the economics of both the copper and gold prospects.

Wafi "Near Mine" (Brownfields)

Drilling continued at the Western Zone with the aim of proving up additional high-grade underground resources for the

Wafi Au feasibility. Significant intercepts returned from WR261 included:

WR261:

23m

@ 7.0 g/t Au from 187m

21m

@ 3.9 g/t Au from 229m

13m

@ 8.4 g/t Au from 286m

13m

@ 8.5 g/t Au from 343m

Excellent first pass drill results and rock chip samples from Biamena Prospect.

Results for the two initial holes drilled at Biamena prospect were received during the quarter and included:

BMA002: 24m

@ 3.41 g/t Au from 177m

Including: 11m

@ 5.38 g/t Au from 181m

The initial intercept in BMA002 is particularly significant as no previous drilling exists in the area and mineralisation encountered is completely open.

Reconnaissance geological mapping on gridlines cut for the induced polarisation geophysical survey have outlined several

new zones of mineralisation south of the main prospect area. Rock chip sampling obtained high grade gold, silver and base metal assays up to 88g/t Au, 400g/t Ag, 5.8% Cu and 2.3% Pb. The results more than double the footprint of the anomalous area at Biamena, and highlight the prospectivity of the area for porphyry copper-gold and related epithermal

Au mineralisation.

Nambonga North

Based 2 km northwest of Golpu, Nambonga North prospect has significant porphyry Cu/Au potential (similar to Golpu) and together with the polymetallic massive sulphide lode developed off the western margin of the intrusive could have a major positive impact on the economics of Wafi-Golpu project. Results received for the mineralised porphyry stock during the quarter included:

WR262:

178m @ 1.2 g/t Au, 0.3 % Cu from 232m

WR264:

213m @ 1.1 g/t Au, 0.3% Cu from 300m

In addition, the down dip extension of the high-grade polymetallic Au-Zn-Ag-Pb sulphide lode adjacent to the porphyry mineralisation was also intersected:

WR264:

6m

@ 3.6 g/t Au, 5.3 % Zn, 27 g/t Ag and 1.1 % Pb from 286m

Four rigs are now drilling at the prospect in order to accelerate the work programme. Additional drilling capacity is currently being sourced.

NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS FOR THE QUARTER AND SIX MONTHS ENDED 31 DECEMBER 2007

1.

Accounting policies

(a) Basis of accounting

The condensed consolidated interim financial statements for the period ended 31 December 2007 have been prepared using accounting policies that comply with International Financial Reporting Standards (IFRS), which are consistent with the accounting policies used in the audited annual financial statements for the year ended 30 June 2007, except for accounting policy changes made after the date of the annual financial statements. These condensed consolidated interim financial statements are prepared in accordance with IAS 34, Interim Financial Reporting, and should be read in conjunction with the financial statements for the year ended 30 June 2007.

New accounting standards and IFRIC interpretations

Certain new accounting standards and IFRIC interpretations have been published that are mandatory for accounting periods beginning on or after 1 January 2008. These new standards and interpretations have not been early adopted by the Group and a reliable estimate of the impact of the adoption thereof for the Group cannot yet be determined for all of them, as management are still in the process of determining the impact thereof on future financial statements.

At the date of finalising of these financial statements, the following Standards and Interpretations were in issue but not yet effective:

(b) Implementation of accounting policy

IAS 23 (Revised) – Borrowing Costs: The company early adopted IAS 23 (Revised) – Borrowing Costs, retrospectively as of 1 July 2000, which requires that management capitalise borrowing costs directly attributable to the acquisition and construction of qualifying assets. Qualifying assets are assets that take a substantial time to get ready for their intended use.

The impact of this adjustment was as follows:

48

The borrowing costs are capitalised to the cost of those assets, until such time as the assets are substantially ready for their intended use.

All other borrowing costs are dealt with in the income statement in the period in which they are incurred.

2.

Employment termination and restructuring costs

During the December 2007 quarter, a voluntary retrenchment process was commenced due to the decision to decentralise services.

3.

Provision for doubtful debts

The full amount outstanding on the sale of the Deelkraal surface asset was provided for as there is uncertainty whether the consideration will be received. This does not take into account any amounts that may be recovered if the assets are salvaged.

4.

Loss on sale of listed investments

Harmony accounted for its 29.2% stake in Western Areas Limited through its subsidiary, ARMgold/Harmony Joint Investment Company Pty Ltd, on the equity basis of accounting until 1 December 2006. On this date Harmony accepted

Gold Fields Limited's (GFI) offer of 35 GFI shares for every 100 Western Area Limited shares held. The remaining investment

in these GFI shares were sold during the September 2007 quarter for a loss of R459 million.

P

30

5.

Non-current assets held for sale and discontinued operations

The assets and liabilities related to Mt Magnet and South Kal (operations in Australia), ARMgold Welkom and Orkney

operations (operations in the Free State and Northwest areas), and Kudu and Sable (operations in the Free State area), have

been presented as held for sale on 30 June 2007.

On 6 December 2007, the sale relating to the South Kal operation (operation in Australia) was concluded at a loss, net of

tax, of R51 million and the assets were derecognised.

The assets and liabilities relating to the Cooke 1, Cooke 2, Cooke 3, Cooke plant and relating surface operations (operations

in the Gauteng area) have been presented as held for sale following the approval of the Group's management on 16 October 2007.

Underground operations at St Helena shaft were ceased during November 2007 and was classified as a discontinued operation.

The comparative results have been restated due to these reclassifications.

6.

(Loss)/earnings per share

(Loss)/earnings per share is calculated on the weighted average number of shares in issue for the quarter ended 31 December 2007: 399.8 million (30 September 2007: 399.5 million, 31 December 2006: 397.7 million) and the six months

ended 31 December 2007: 399.7 million (31 December 2006: 397.7 million).

The fully diluted (loss)/earnings per share is calculated on weighted average number of diluted shares in issue for the quarter ended 31 December 2007: 402.1 million (30 September 2007: 402.8 million, 31 December 2006: 403.7 million) and

the six months ended 31 December 2007: 402.4 million (31 December 2006: 403.7 million). The effect of the share options

is anti-dilutive.

11. Subsequent events

On 24 January 2008, ESKOM advised Harmony that it would be interrupting the power supply to the Company's South

African operations. As the safety of the miners could not be guaranteed, mining was halted for four days, after which shafts operated at between 60% – 80%. A meeting between ESKOM and its industrial consumers was held on 29 January

2008, whereby ESKOM committed to supplying 90% of the Company's electricity demand prior to the shut down.

This

came into effect on 1 February 2008. Management is restructuring operating processes in order to gain the most effective

and efficient use of the electricity allotted. At this stage, the effect of the interruption as well as the decreased power

supply has not been quantified but will impact on the gold production.

12. Segment report

The primary reporting format of the Company is by business segment. As there is only one business segment, being mining, extraction and production of gold, the relevant disclosures have been given in the condensed consolidated financial statements.

13. Review report

The condensed consolidated financial statements for the six months ended 31 December 2007 on pages 24 to 33 have been reviewed in accordance with International Standards on Review Engagements 2410 – “*Review of interim financial information performed by the Independent Auditors of the entity*” by PricewaterhouseCoopers Inc. Their unqualified review opinion is available for inspection at the Company’s registered office.

Mineral Resources and Ore Reserves

No material changes were made to Harmony's Mineral Resources and Ore Reserves for the quarter ended December 2007. Taking

into account the last six months' depletion of reserves, the Harmony Mineral Resources and Ore Reserves as stated in the Harmony

2007 annual report are an accurate reflection of the company's current position. The Mineral Resources and Ore Reserves are

comprehensively audited by a team of internal competent persons that operate independently from the operating units.
