ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 31, 2012

OR
 TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

(Commission File Number) 001-32410

CELANESE CORPORATION

(Exact Name of Registrant as Specified in its Charter)

Delaware

(State or Other Jurisdiction of Incorporation or Organization)

98-0420726

(I.R.S. Employer Identification No.)

222 West Las Colinas Blvd., Suite 900N

Irving TX

(Address of Principal Executive Offices)

(972) 443-4000

(Registrant's telephone number, including area code)

Securities registered pursuant to Section 12(b) of the Act

75039-5421

(Zip Code)

Title of Each Class

Series A Common Stock, par value \$0.0001 per share

Securities registered pursuant to Section 12(g) of the Act

None

Name of Each Exchange
on Which Registered

New York Stock Exchange

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Website, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of the registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Edgar Filing: Celanese Corp - Form 10-K

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company
(Do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes No

The aggregate market value of the registrant's Series A Common Stock held by non-affiliates as of June 30, 2012 (the last business day of the registrants' most recently completed second fiscal quarter) was \$4,829,670,405.

The number of outstanding shares of the registrant's Series A Common Stock, \$0.0001 par value, as of February 4, 2013 was 159,652,401.

DOCUMENTS INCORPORATED BY REFERENCE

Certain portions of the registrant's Definitive Proxy Statement relating to the 2013 annual meeting of stockholders, to be filed with the Securities and Exchange Commission, are incorporated by reference into Part III.

Special Note Regarding Forward-Looking Statements

Certain statements in this Annual Report on Form 10-K ("Annual Report") or in other materials we have filed or will file with the Securities and Exchange Commission ("SEC"), and incorporated herein by reference, are forward-looking in nature as defined in Section 27A of the Securities Act of 1933, as amended, Section 21E of the Securities Exchange Act of 1934, as amended, and the Private Securities Litigation Reform Act of 1995. You can identify these statements by the fact that they do not relate to matters of a strictly factual or historical nature and generally discuss or relate to forecasts, estimates or other expectations regarding future events. Generally, the words "believe," "expect," "intend," "estimate," "anticipate," "project," "plan," "may," "can," "could," "might," "will" and similar expressions identify forward-looking statements, including statements that relate to such matters as planned and expected capacity increases and utilization; anticipated capital spending; environmental matters; legal proceedings; exposure to, and effects of hedging of raw material and energy costs and foreign currencies; interest rate fluctuations; global and regional economic, political, and business conditions; expectations, strategies, and plans for individual assets and products, business segments, as well as for the whole Company; cash requirements and uses of available cash; financing plans; pension expenses and funding; anticipated restructuring, divestiture, and consolidation activities; cost reduction and control efforts and targets and integration of acquired businesses.

Forward-looking statements are not historical facts or guarantees of future performance but instead represent only our beliefs at the time the statements were made regarding future events, which are subject to significant risks, uncertainties, and other factors, many of which are outside of our control and certain of which are listed above. Any or all of the forward-looking statements included in this Annual Report and in any other materials incorporated by reference herein may turn out to be materially inaccurate. This can occur as a result of incorrect assumptions, in some cases based upon internal estimates and analyses of current market conditions and trends, management plans and strategies, economic conditions, or as a consequence of known or unknown risks and uncertainties. Many of the risks and uncertainties mentioned in this Annual Report, such as those discussed in Item 1A. Risk Factors, Item 3. Legal Proceedings and Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations will be important in determining whether these forward-looking statements prove to be accurate. Consequently, neither our stockholders nor any other person should place undue reliance on our forward-looking statements and should recognize that actual results may differ materially from those anticipated by us.

All forward-looking statements made in this Annual Report are made as of the date hereof, and the risk that actual results will differ materially from expectations expressed in this Annual Report will increase with the passage of time. We undertake no obligation, and disclaim any duty, to publicly update or revise any forward-looking statements, whether as a result of new information, future events, changes in our expectations or otherwise. However, we may make further disclosures regarding future events, trends and uncertainties in our subsequent reports on Forms 10-K, 10-Q and 8-K to the extent required under the Exchange Act. The above cautionary discussion of risks, uncertainties and possible inaccurate assumptions relevant to our business includes factors we believe could cause our actual results to differ materially from expected and historical results. Other factors beyond those listed above or in Item 1A. Risk Factors, Item 3. Legal Proceedings and Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations below, including factors unknown to us and factors known to us which we have determined not to be material, could also adversely affect us.

Item 1. Business

Basis of Presentation

In this Annual Report on Form 10-K, the term "Celanese" refers to Celanese Corporation, a Delaware corporation, and not its subsidiaries. The terms "Company," "we," "our" and "us" refer to Celanese and its subsidiaries on a consolidated basis. The term "Celanese US" refers to the Company's subsidiary, Celanese US Holdings LLC, a Delaware limited liability company, and not its subsidiaries.

Industry

This Annual Report on Form 10-K includes industry data obtained from industry publications and surveys as well as our own internal company surveys. Third-party industry publications, surveys and forecasts generally state that the information contained therein has been obtained from sources believed to be reliable. The statements regarding the Company's industry position in this document are based on information derived from, among others, the 2012 IHS Chemicals Economics Handbook.

Overview

The Company is a global technology and specialty materials company that engineers and manufactures a wide variety of products essential to everyday living. As a recognized innovator in product and process technology in the chemicals industry, we help to create applications that meet the needs of our customers worldwide. We are one of the world's largest producers of acetyl products, which are intermediate chemicals for nearly all major industries. We are also a leading global producer of high performance engineered polymers that are used in a variety of high-value applications. Our highly-diversified product portfolio serves a broad range of end-use applications including paints and coatings, textiles, automotive applications, consumer and medical applications, performance industrial applications, filter media, paper and packaging, chemical additives, construction, consumer and industrial adhesives, and food and beverage applications. Serving a diverse global customer base, our products hold leading global positions in the major product industries that we serve, supported by our large global production capacity, operating efficiencies, proprietary production technology and competitive cost structures.

Celanese's history began in 1918, the year that its predecessor company, The American Cellulose & Chemical Manufacturing Company, was incorporated. The company, which manufactured cellulose acetate, was founded by Swiss brothers Drs. Camille and Henri Dreyfus. Since that time, the Company has transformed into a leading global chemical company. The current Celanese was incorporated in 2005 under the laws of the State of Delaware and is a US-based public company traded on the NYSE under the ticker symbol CE.

Headquartered in Irving, Texas, our operations are primarily located in North America, Europe and Asia and consist of 27 global production facilities, and an additional 9 strategic affiliate production facilities. As of December 31, 2012, we employed approximately 7,550 people worldwide.

Due to our geographic breadth, our net sales are balanced across the global regions. For the year ended December 31, 2012, 28% of our net sales were to customers located in the United States. See [Note 25 - Segment Information](#) in the accompanying consolidated financial statements for further details on our international sales.

Business Segment Overview

We operate principally through four business segments: Advanced Engineered Materials, Consumer Specialties, Industrial Specialties and Acetyl Intermediates. See Note 25 - Segment Information in the accompanying consolidated financial statements for further details on our business segments.

The table below illustrates each business segment's net sales to external customers for the year ended December 31, 2012, as well as each business segment's major products and end-use applications.

	Advanced Engineered Materials	Consumer Specialties	Industrial Specialties	Acetyl Intermediates
	(In \$ millions)			
2012 Net Sales ⁽¹⁾	1,261	1,182	1,184	2,791
Key Products	<ul style="list-style-type: none"> • Polyoxymethylene ("POM") • GUR® ultra-high molecular weight polyethylene • Polybutylene terephthalate ("PBT") • Long-fiber reinforced thermoplastics ("LFT") • Liquid crystal polymers ("LCP") 	<ul style="list-style-type: none"> • Acetate tow • Acetate flake • Acetate film • Sunet® high intensity sweeteners • Sorbates 	<ul style="list-style-type: none"> • Conventional emulsions • Vinyl acetate ethylene emulsions ("VAE") • Ethylene vinyl acetate ("EVA") resins and compounds • Low-density polyethylene resins ("LDPE") 	<ul style="list-style-type: none"> • Acetic acid • Vinyl acetate monomer ("VAM") • Acetic anhydride • Acetaldehyde • Ethyl acetate • Formaldehyde • Butyl acetate
Major End-Use Applications	<ul style="list-style-type: none"> • Fuel system components • Automotive safety systems • Conveyor belts • Battery separators • Electronics • Appliances • Filtrations • Medical Devices • Telecommunications 	<ul style="list-style-type: none"> • Filter products • Beverages • Confections • Baked goods 	<ul style="list-style-type: none"> • Paints • Coatings • Adhesives • Textiles • Paper finishing • Flexible packaging • Lamination products • Photovoltaic cell systems • Medical tubing • Automotive parts 	<ul style="list-style-type: none"> • Paints • Coatings • Adhesives • Lubricants • Pharmaceuticals • Films • Textiles • Inks • Plasticizers • Esters • Solvents

⁽¹⁾ Net sales for Consumer Specialties and Acetyl Intermediates exclude inter-segment sales of \$4 million and \$440 million, respectively, for the year ended December 31, 2012.

Business Segments

Advanced Engineered Materials

Our Advanced Engineered Materials segment uses advanced polymer technology to produce a broad portfolio of high performance specialty polymers used in a wide spectrum of applications, including automotive, medical and electronics products, as well as other consumer and industrial applications. As a performance-driven solutions provider, Advanced Engineered Materials maintains its competitive advantage with leading technical and application expertise that enables innovation and new product development in concert with its customers. By focusing on new

application development for its product lines, it often creates custom formulations to satisfy the technical and processing requirements of its customers' applications. With a strong specification position, Advanced Engineered Materials is able to build upon its differentiated polymer processing and material capability to create sustainable value for its high performance polymers. This business segment also includes four strategic affiliates that complement our global reach, improve our ability to capture growth opportunities in emerging economies and position us as a leading participant in the global specialty polymers industry.

Advanced Engineered Materials' specialty polymers have chemical and physical properties that enable them to perform in a variety of conditions. These include enduring elevated temperatures, resisting adverse chemical interactions with solvents and withstanding deformation. POM, PBT and LFT are used in a broad range of performance-demanding applications including automotive components, medical devices, electronics, appliances and industrial applications. GUR[®] ultra-high molecular weight polyethylene is used in battery separators, conveyor belts, filtration equipment, coatings and medical devices. Primary end uses for LCP are electrical and electronics applications or products. These value-added applications in diverse end-uses support the business' global growth trends.

Value-in-use pricing for most of these products, particularly specialized product grades for targeted applications, generally reflect the value added in complex polymer chemistry, precision formulation and compounding, and the extensive application development services provided.

Advanced Engineered Materials has polymerization, compounding and research and technology centers in Germany, Brazil, China and the United States. In 2010, we announced the construction of a new 50,000 ton POM manufacturing facility in Saudi Arabia through our Ibn Sina affiliate. This facility is expected to be completed in late 2015. In 2011, we opened a state-of-the art POM production facility in Frankfurt Hoechst Industrial Park, Germany. This new POM facility is the world's largest and is expected to meet the increased global demand for innovative specialty solutions in polymer-based products.

Key Products

POM. Polyoxymethylene, also commonly known as polyacetal in the chemical industry, is sold by Advanced Engineered Materials under the trademarks Celcon[®] and Hostaform[®]. POM is used for mechanical parts in automotive applications, including fuel system components, and in electrical, medical and consumer applications such as drug delivery systems and gears for large appliances. Polyplastics Co., Ltd., our 45%-owned strategic venture ("Polyplastics"), and Korea Engineering Plastics Co., Ltd., our 50%-owned strategic venture ("KEPCO"), also manufacture POM and other engineering resins in the Asia-Pacific region.

The primary raw material for POM is formaldehyde, which is manufactured from methanol. Advanced Engineered Materials sources formaldehyde in the United States from our Acetyl Intermediates segment and manufactures formaldehyde in Germany from purchased methanol.

Ultra-high molecular weight polyethylene. Our ultra-high molecular weight polyethylene products, sold under the trademark GUR[®], are highly engineered materials designed for heavy-duty industrial and automotive applications. They are used in items such as industrial conveyor belts, car battery separator panels, as well as specialty medical and consumer applications, such as sports prostheses and equipment. GUR[®] micro powder grades are used for high-performance filters, membranes, diagnostic devices, coatings and additives for thermoplastics and elastomers. High tenacity fibers based on GUR[®] ultra-high molecular weight polyethylene are also used in protective ballistic applications. The primary raw material for GUR[®] ultra-high molecular weight polyethylene is ethylene.

Polyesters. Our products include a series of thermoplastic polyesters including Celanex[®] PBT, Celanex[®] PET, Thermx[®] PCT and Vandar[®], as well as Riteflex[®], a thermoplastic polyester elastomer. They are used in a wide variety of automotive, electrical and consumer applications, including ignition system parts, radiator grilles, electrical switches, appliance and sensor housings, light emitting diodes ("LEDs") and technical fibers.

LCP. Liquid crystal polymers, such as Vectra[®] and Zenite[®], are primarily used in electrical and electronics applications for precision parts with thin walls and complex shapes. They are also used in high heat cookware applications. Raw materials for LCP include acetic anhydride, which is sourced from our Acetyl Intermediates segment, and monomers such as hydroxybenzoic acid.

LFT. Celstran[®] and Compel[®] are long-fiber reinforced thermoplastics that impart extra strength and stiffness, making them more suitable for larger parts than conventional thermoplastics. Both products are used in automotive, transportation and industrial applications, such as instrument panels, consoles and front end modules. The primary raw materials for LFT include polypropylene and a variety of fibers such as glass, stainless steel and carbon.

Geographic Regions

The following table illustrates the destination of the net sales of the Advanced Engineered Materials segment by geographic region.

Net Sales to External Customers by Destination — Advanced Engineered Materials

	Year Ended December 31,		2011		2010			
	2012	% of	\$	% of	\$	% of		
	\$	Segment	\$	Segment	\$	Segment	\$	Segment
	(In millions, except percentages)							
North America	478	38	% 438	34	% 384	34	%	
Europe and Africa	528	42	% 622	48	% 530	48	%	
Asia-Pacific	206	16	% 191	15	% 152	14	%	
South America	49	4	% 47	3	% 43	4	%	
Total	1,261		1,298		1,109			

Customers

Advanced Engineered Materials' principal customers are original equipment manufacturers and their suppliers serving the automotive, industrial, consumer and medical industries. By collaborating with its customers, Advanced Engineered Materials assists in developing and improving specialized applications and systems. Advanced Engineered Materials has long-standing relationships with most of its major customers. In addition, it utilizes distribution partners as well as online tools to expand its customer base. Contracts with customers for most Advanced Engineered Materials products typically have a term of one to two years.

Advanced Engineered Materials' sales in Asia are made directly and through distributors, including its strategic affiliates. These affiliates, Polyplastics, KEPCO and Fortron Industries LLC, our 50%-owned strategic venture with Kureha Corporation ("Fortron"), are accounted for under the equity method of accounting and therefore not included in Advanced Engineered Materials' consolidated net sales. If Advanced Engineered Materials' portion of the sales made by these strategic affiliates were included in the table above, the percentage of sales sold in Asia-Pacific would be substantially higher. In addition to our Advanced Engineered Materials' strategic affiliates, we directly service Asian demand by offering our customers global solutions.

Competition

Advanced Engineered Materials' principal competitors include BASF AG, E.I. DuPont de Nemours and Company, DSM N.V., SABIC Innovative Plastics and Solvay S.A. Other regional competitors include Asahi Kasei Corporation, Mitsubishi Gas Chemical Company, Inc., Chevron Phillips Chemical Company, L.P., Braskem S.A., Lanxess AG, Teijin, Sumitomo Corporation and Toray Industries Inc.

Consumer Specialties

The Consumer Specialties segment includes our Acetate Products and Nutrinova businesses, which serve consumer-driven applications. These businesses deliver growth primarily through manufacturing productivity, geographic expansions and targeting high value opportunities in diverse applications, and generally are not dependent on gross domestic product.

Our Acetate Products business is a leading producer and supplier of acetate flake, acetate film and acetate tow, primarily used in filter products applications. We also hold an approximately 30% ownership interest in three separate ventures in China that produce acetate flake and tow. China National Tobacco Corporation, a Chinese state-owned tobacco entity, has been our venture partner for over two decades and has driven successful growth in our Acetate business.

During 2012, the Company introduced CelFX™ matrix technology, which redefines tobacco filtration performance, enabling unique product attributes and innovation, such as increased filter design flexibility and improved constituent reduction. CelFX™ also supports a broad choice of enhancement additives and is engineered to run on existing equipment.

Acetate Products has production sites in the United States, Mexico, the United Kingdom and Belgium, along with sites at its three acetate ventures in China. In November 2012, we ceased manufacturing acetate tow and acetate flake at our Spondon, Derby, United Kingdom site. We will continue to manufacture our Clarifoil® film at this facility. Our Nutrinova business is a leading international supplier of premium quality ingredients for the food, beverage and pharmaceutical industries. The company produces and sells Sunett® (acesulfame potassium), a high intensity sweetener. It is also one of the world's largest producers of food protection ingredients, such as potassium sorbates and sorbic acid. Nutrinova's expertise is based on its more than sixty years of experience in developing and marketing specialty ingredients to the food and beverage and pharmaceutical industries. While this business has traditionally focused on providing low calorie sweeteners in the beverage industry, it continues to target high value opportunities in more diverse applications such as oral hygiene, pharmaceuticals, dairy and cereals.

During 2012, Nutrinova announced Sunett®SL, the first new line of product from the Nutrinova's SunsationSM platform. Sunett®SL products are drop-in solutions that can be easily incorporated into customers' food and beverage formulations, helping customers bring products to market faster. Sensory tests carried out by an accredited external institute confirm that Sunett®SL significantly improves the sweetness and mouth-feel perception of sugar-free and sugar-reduced products.

Nutrinova has a production facility in Germany, with sales and distribution facilities in all major regions of the world.

Key Products

Acetate flake, acetate tow and acetate film (Clarifoil). Acetate tow is a fiber used primarily in cigarette filters. In order to produce acetate tow, we first produce acetate flake by processing wood pulp with acetic acid and acetic anhydride. Wood pulp generally comes from reforested trees and is purchased externally from a variety of sources, and acetic anhydride is an intermediate chemical that we produce from acetic acid. The acetate flake is then further processed into acetate tow. Flake can also be solvent cast to create a film which is primarily used in packaging for food and high-end luxury goods.

Sales of acetate tow amounted to 15%, 14% and 15% of our consolidated net sales for the years ended December 31, 2012, 2011 and 2010, respectively.

Sunett® sweeteners. Acesulfame potassium, a high intensity sweetener sold under the trademark Sunett®, is used in a variety of beverages, confections and dairy products throughout the world. Sunett® sweetener is the ideal blending partner for caloric and non-caloric sweeteners and is recognized for its consistent product quality and reliable supply. Food protection ingredients. Nutrinova's food protection ingredients are mainly used in foods, beverages and personal care products. Sorbates pricing is extremely sensitive to demand and industry capacity and is not necessarily dependent on the cost of raw materials.

Geographic Regions

The following table illustrates the destination of the net sales of the Consumer Specialties segment by geographic region.

Net Sales to External Customers by Destination — Consumer Specialties

	Year Ended December 31,		2011		2010			
	2012	% of	\$	% of	\$	% of	\$	% of
		Segment		Segment		Segment		Segment
	(In millions, except percentages)							
North America	200	17	% 180	16	% 186	17	%	
Europe and Africa	464	39	% 459	40	% 448	41	%	
Asia-Pacific	452	38	% 456	39	% 394	36	%	
South America	66	6	% 63	5	% 61	6	%	
Total ⁽¹⁾	1,182		1,158		1,089			

(1) Excludes inter-segment sales of \$4 million, \$3 million and \$9 million for the years ended December 31, 2012, 2011 and 2010, respectively.

Customers

Acetate tow is sold principally to the major tobacco companies that account for a majority of worldwide cigarette production. Contracts with most of our customers are generally entered into on an annual basis.

Customers of Clarifoil® include printers, carton manufacturers, retailers, packaging buyers, publishers and designers. Nutrinova primarily sells Sunett® sweeteners to a limited number of large multinational and regional customers in the beverage and food industry under long-term and annual contracts. Nutrinova sells food protection ingredients primarily through regional distributors to small and medium sized customers and directly to large multinational customers in the food industry.

Competition

Acetate Products' principal competitors include Daicel Chemical Industries Ltd., Eastman Chemical Corporation and Solvay S.A.

The principal competitors for Sunett® sweetener include The NutraSweet Company, Ajinomoto Co., Inc., Tate & Lyle PLC and several Chinese manufacturers. In sorbates, Nutrinova competes with Nantong AA, Daicel Chemical Industries Ltd. and other Chinese manufacturers.

Industrial Specialties

The Industrial Specialties segment, which includes the Emulsions and EVA Performance Polymers businesses, is active in every major global industrial sector and serves diverse industrial and consumer end-use applications. These include traditional vinyl-based end uses, such as paints and coatings and adhesives, as well as other unique, high-value end uses including solar cells and medical applications.

The Emulsions business is a leading global producer of vinyl acetate-based emulsions and develops products and application technologies to improve performance, create value and drive innovation in applications such as paints and coatings, adhesives, construction, glass fiber, textiles and paper. The business has manufacturing facilities in major global regions and is supported by expert technical service regionally. Celanese emulsion products are sold under globally and regionally recognized brands including EcoVAE®, Mowilith®, Vinamul®, Celvolit®, BriteCoat®, TufCOR™ and Avicor™. The Emulsions business has production sites in the United States, Canada, China, Spain, Sweden, the Netherlands and Germany.

EVA Performance Polymers is a leading North American manufacturer of a full range of low-density polyethylene and specialty EVA resins and compounds. Sold under the Ateva® and VitalDose® brands, these products are used in many applications, including flexible packaging films, lamination film products, hot melt adhesives, medical products, automotive, carpeting and photovoltaic cells. EVA Performance Polymers has a production facility in Edmonton, Alberta, Canada.

The Industrial Specialties segment builds on our leading acetyl technology. Our Acetyl Intermediates segment produces VAM, a primary raw material for our Emulsions and EVA Performance Polymers businesses. Ethylene, another key raw material, is purchased externally from a variety of sources.

Our Industrial Specialties businesses have experienced significant growth in Asia, and we have made investments to support continued growth in the region. In 2011, we doubled the VAE capacity at our integrated chemical complex in Nanjing, China to meet the increased global demand for innovative specialty solutions in vinyl-based emulsions.

In addition to geographic growth, the Industrial Specialties businesses are focused on innovation efforts to increase value. The business segment has successfully launched new innovative products and technologies in non-traditional applications such as medical, carpet, textiles and paper.

Key Products

Our Emulsions business produces conventional vinyl- and acrylate-based emulsions and VAE. Emulsions are made from VAM, ethylene, acrylate esters and styrene. VAE is a key component of water-based architectural coatings, adhesives, non-wovens, textiles, glass fiber and other applications.

EVA Performance Polymers produces low-density polyethylene and EVA resins and compounds. EVA resins and compounds are produced in high-pressure reactors from ethylene and VAM.

Geographic Regions

The following table illustrates the destination of the net sales of the Industrial Specialties segment by geographic region.

Net Sales to External Customers by Destination — Industrial Specialties

	Year Ended December 31,		2011		2010			
	2012	% of	\$	% of	\$	% of	\$	% of
	\$	Segment	\$	Segment	\$	Segment	\$	Segment
	(in millions, except percentages)							
North America	475	40	% 492	40	% 450	43	%	
Europe and Africa	483	41	% 550	45	% 481	47	%	
Asia-Pacific	213	18	% 169	14	% 97	9	%	
South America	13	1	% 12	1	% 8	1	%	
Total	1,184		1,223		1,036			

Customers

Industrial Specialties' products are sold to a diverse group of regional and multinational customers. Customers for emulsions products are manufacturers of water-based paints and coatings, adhesives, paper, building and construction products, glass fiber, non-wovens and textiles. Customers for EVA Performance Polymers products are engaged in the manufacture of a variety of products, including hot melt adhesives, automotive components, solar energy products, thermal laminations, flexible and food packaging materials, medical packaging and controlled-release medical devices.

Competition

Principal competitors for the Emulsions business include The Dow Chemical Company, BASF AG, Dairen Chemical, Wacker Chemie AG and several smaller regional manufacturers.

Principal competitors for the EVA Performance Polymers business include E.I. DuPont de Nemours and Company, ExxonMobil Chemical, Arkema and several Asian manufacturers.

Acetyl Intermediates

Our Acetyl Intermediates segment produces and supplies acetyl products, including acetic acid, VAM, acetic anhydride and acetate esters. These products are generally used as starting materials for colorants, paints, adhesives, coatings and medicines. Other chemicals produced in this business segment are organic solvents and intermediates for pharmaceutical, agricultural and chemical products.

As an industry leader, Acetyl Intermediates has built on its leading technology, an advantaged feedstock position and attractive competitive position to drive growth. With decades of experience, advanced proprietary process technology and favorable production costs, we are a leading global producer of acetic acid and VAM. Our production of acetyl products employs our leading proprietary and licensed technologies, including AOPlus[®], AOPlus[®]2 and AOPlus[®]3 technologies for the production of acetic acid and Vantage[®], VantagePlus[™] and Vantage[®]2 VAM technologies. Our technology is expected to enhance production efficiency and lower operating costs. AOPlus[®]3 technology, introduced in 2011, extends our historical technology advantage and enables us to construct a greenfield acetic acid facility with a capacity of 1.8 million tons at a lower capital cost. Vantage[®]2 technology, also introduced in 2011, could increase VAM capacity by 50% to meet growing customer demand globally. We believe our production technology is among the lowest cost in the industry and provides us with global growth opportunities through low cost expansions and a cost advantage over our competitors. Acetyl Intermediates has production sites in the United States, China, Mexico, Singapore, Spain, France and Germany.

Building on our acetic acid technology platform, we developed Celanese TCX[®] ethanol process technology to supply current and prospective customers with ethanol for industrial purposes and for other potential uses. Industrial ethanol is used in chemical and industrial applications for the manufacture of paints, coatings, inks and pharmaceuticals. This innovative, new process combines our proprietary and leading acetyl platform with advanced manufacturing technology to produce ethanol from hydrocarbon-sourced feedstocks.

In 2012, we completed construction of a technology development unit for ethanol production at our facility in Clear Lake, Texas which will allow us to continue the advancement of our acetyl and TCX[®] technologies. In addition, we are in the process of modifying and enhancing our existing integrated acetyl facility in Nanjing, China with our TCX[®] advanced technology. The modifications would add approximately 275,000 tons of ethanol production capacity by mid-2013. We also intend to construct one, and possibly two, additional industrial ethanol complexes in China, following necessary approvals, utilizing Celanese TCX[®] ethanol process technology to help supply applications for the growing Asia region.

Key Products

Acetyl Products. Acetyl products include acetic acid, VAM, acetic anhydride and acetaldehyde. Acetic acid is primarily used to manufacture VAM, purified terephthalic acid and other acetyl derivatives. VAM is used in a variety of adhesives, paints, films, coatings and textiles. Acetic anhydride is a raw material used in the production of cellulose acetate, detergents and pharmaceuticals. Acetaldehyde is a major feedstock for the production of a variety of derivatives, such as pyridines, which are used in agricultural products. We manufacture acetic acid, VAM and acetic anhydride for our own use, as well as for sale to third parties.

Acetic acid and VAM, our basic acetyl intermediates products, are impacted by global supply and demand fundamentals and are cyclical in nature. The principal raw materials in these products are: carbon monoxide, which we generally purchase under long-term contracts; methanol, which we generally purchase under both long-term and short-term contracts; and ethylene, which we purchase from numerous sources. Generally, methanol and ethylene are commodity products available from a wide variety of sources.

Sales from acetyl products amounted to 32% of our consolidated net sales for the year ended December 31, 2012 and 34% for each of the years ended December 31, 2011 and 2010.

Solvents and Derivatives. We manufacture a variety of solvents, formaldehyde and other chemicals, which in turn are used in the manufacture of paints, coatings, adhesives and other products. Many solvents and derivatives products are derived from our production of acetic acid. Primary products are:

- Ethyl acetate, an acetate ester that is a solvent used in coatings, inks and adhesives and in the manufacture of photographic films and coated papers;

- Butyl acetate, an acetate ester that is a solvent used in inks, pharmaceuticals and perfume;

- Formaldehyde, paraformaldehyde and formcels, which are primarily used to produce adhesive resins for plywood, particle board, coatings, POM engineering resins and a compound used in making polyurethane; and

- Other chemicals, such as crotonaldehyde, which are used by the Nutrinova business for the production of sorbates, as well as raw materials for the fragrance and food ingredients industry.

Sales from solvents and derivatives products amounted to 11%, 12% and 11% of our consolidated net sales for the years ended December 31, 2012, 2011 and 2010, respectively.

Geographic Regions

The following table illustrates net sales by destination of the Acetyl Intermediates segment by geographic region. Net Sales to External Customers by Destination — Acetyl Intermediates

	Year Ended December 31,					
	2012		2011		2010	
	\$	% of Segment	\$	% of Segment	\$	% of Segment
(In millions, except percentages)						
North America	698	25 %	717	23 %	654	24 %
Europe and Africa	970	35 %	1,110	36 %	897	34 %
Asia-Pacific	1,026	37 %	1,166	38 %	1,046	39 %
South America	97	3 %	90	3 %	85	3 %
Total ⁽¹⁾	2,791		3,083		2,682	

⁽¹⁾ Excludes inter-segment sales of \$440 million, \$468 million and \$400 million for the years ended December 31, 2012, 2011 and 2010, respectively.

Customers

Acetyl Intermediates markets its products both directly to customers and through distributors. Acetic acid, VAM and acetic anhydride are global businesses which have several large customers. Generally, we supply these global customers under multi-year contracts. Acetic acid, VAM and acetic anhydride customers produce polymers used in water-based paints, adhesives, paper coatings, polyesters, film modifiers, pharmaceuticals, cellulose acetate and textiles. We have long-standing relationships with most of these customers.

Solvents and derivatives are sold to a diverse group of regional and multinational customers under multi-year contracts and on the basis of long-standing relationships. Solvents and derivatives customers are primarily engaged in the production of paints, coatings and adhesives. We manufacture formaldehyde for our own use as well as for sale to a few regional customers that include manufacturers in the wood products and chemical derivatives industries. The sale of formaldehyde is based on long- and short-term agreements. Specialty solvents are sold globally to a wide variety of customers, primarily in the coatings and resins and the specialty products industries. These products serve global regions in the synthetic lubricant, agrochemical, rubber processing and other specialty chemical areas.

Competition

Our principal competitors in the Acetyl Intermediates segment include Atofina S.A., BASF AG, BP PLC, Chang Chun Petrochemical Co., Ltd., Daicel Chemical Industries Ltd., The Dow Chemical Company, Eastman Chemical Corporation, E.I. DuPont de Nemours and Company, LyondellBasell Industries, Nippon Gohsei, Perstorp Inc., Jiangsu Sopo Corporation (Group) Ltd., Showa Denko K.K., Kuraray Co. Ltd. and other Chinese producers.

Other Activities

Other Activities primarily consists of corporate center costs, including financing and administrative activities such as legal, accounting and treasury functions, interest income and expense associated with our financing activities, and our captive insurance companies. Our two wholly-owned captive insurance companies are a key component of our global risk management program, as well as a form of self-insurance for our liability and workers compensation risks. The captive insurance companies issue insurance policies to our subsidiaries to provide consistent coverage amid fluctuating costs in the insurance market and to lower long-term insurance costs through the reduction of certain fees and expenses. The captive insurance companies retain risk at levels approved by management and obtain reinsurance coverage from third parties to limit the net risk retained. One of the captive insurance companies also insures certain third-party risks.

Strategic Affiliates

Our strategic affiliates represent an important component of our strategy for accelerated growth and global expansion. We have a substantial portfolio of ventures in various regions, including Asia-Pacific, North America, the Middle East and Europe. These ventures, some of which date back as far as the 1960s, have sizeable operations and are significant within their industries.

Our strategic affiliates have similar growth patterns and business models as our core businesses. With shared characteristics such as products, applications, and manufacturing technology, these strategic affiliates complement and extend our technology and specialty materials portfolio. We have historically entered into these investments to gain access to local demand, minimize costs and accelerate growth in areas we believe have significant future business potential. Depending on the level of investment and other factors, we account for our strategic ventures using either the equity method or cost method of accounting.

Our strategic affiliates contribute substantial sales, earnings and cash flows. During the year ended December 31, 2012, our equity affiliates generated combined sales of \$5 billion, resulting in the Company recording \$242 million of equity in net earnings of affiliates in the accompanying consolidated financial statements for the year ended December 31, 2012.

Our key strategic affiliates as of December 31, 2012 are as follows:

	Location	Ownership	Partner(s)	Year Entered
Equity Method Investments				
Advanced Engineered Materials				
National Methanol Company	Saudi Arabia	25 %	Saudi Basic Industries Corporation / Texas Eastern Arabian Corporation Ltd.	1981
Korea Engineering Plastics Co., Ltd	South Korea	50 %	Mitsubishi Gas Chemical Company, Inc./Mitsubishi Corporation	1999
Polyplastics Co., Ltd.	Japan	45 %	Daicel Chemical Industries Ltd.	1964
Fortron Industries LLC	US	50 %	Kureha Corporation	1992
Cost Method Investments				
Consumer Specialties				
Kunming Cellulose Fibers Co. Ltd.	China	30 %	China National Tobacco Corporation	1993
Nantong Cellulose Fibers Co. Ltd.	China	31 %	China National Tobacco Corporation	1986
Zhuhai Cellulose Fibers Co. Ltd.	China	30 %	China National Tobacco Corporation	1993

National Methanol Company (Ibn Sina). National Methanol Company represents approximately 1% of the world's methanol production capacity and is one of the world's largest producers of methyl tertiary-butyl ether ("MTBE"), a gasoline additive. Its production facilities are located in Saudi Arabia. We indirectly own a 25% interest in Ibn Sina through CTE Petrochemicals Company, a 50%/50% joint venture with Texas Eastern Arabian Corporation Ltd. (which also indirectly owns a 25% interest). The remaining 50% interest in Ibn Sina is held by the Saudi Basic Industries Corporation ("SABIC"). SABIC is responsible for all product marketing. Because methanol is a key feedstock for POM production, we enjoy an advantaged position through our Ibn Sina venture that mitigates the impact of raw material and energy volatility.

In April 2010, we announced that Ibn Sina will construct a 50,000 ton POM production facility in Saudi Arabia. The new facility will supply POM to support Advanced Engineered Materials' accelerated future growth plans as well as our venture partners' regional business development. Upon successful startup of the POM facility, our indirect economic interest in Ibn Sina will increase from 25% to 32.5%. SABIC's economic interest will remain unchanged. Korea Engineering Plastics Co., Ltd. KEPCO is the leading producer of POM in South Korea. KEPCO is a venture between Celanese Holdings B.V. (50% ownership and a wholly-owned subsidiary of Celanese GmbH), Mitsubishi Gas Chemical Company, Inc. (40%) and Mitsubishi Corporation (10%). KEPCO has polyacetal production facilities in Ulsan, South Korea, compounding facilities for PBT and nylon in Pyongtaek, South Korea, and participates with Polyplastics and Mitsubishi Gas Chemical Company, Inc. in a world-scale POM facility in Nantong, China.

Polyplastics Co., Ltd. Polyplastics is a leading supplier of engineered plastics in the Asia-Pacific region and is a venture between Daicel Chemical Industries Ltd., Japan (55%) and Ticona LLC (45% ownership and a wholly-owned subsidiary of CNA Holdings LLC). Polyplastics is a producer and marketer of POM and LCP, with principal production facilities located in Japan, Taiwan, Malaysia and China.

Fortron Industries LLC. Fortron is a leading global producer of polyphenylene sulfide ("PPS"), sold under the Fortron® brand, which is used in a wide variety of automotive and other applications, especially those requiring heat and/or chemical resistance. Fortron is a limited liability company whose members are Ticona Fortron Inc. (50% ownership and a wholly-owned subsidiary of CNA Holdings LLC) and Kureha Corporation (50%). Fortron's facility is located in Wilmington, North Carolina. This venture combines the sales, marketing, distribution, compounding and manufacturing expertise of Celanese with the PPS polymer technology expertise of Kureha.

China acetate strategic ventures. We hold ownership interest in three separate acetate production ventures in China as follows: Nantong Cellulose Fibers Co. Ltd. (31%), Kunming Cellulose Fibers Co. Ltd. (30%) and Zhuhai Cellulose Fibers Co. Ltd. (30%). The China National Tobacco Corporation, the Chinese state-owned tobacco entity, controls the remaining ownership interest in each of these ventures.

Our Chinese acetate ventures fund their operations using operating cash flow and pay a dividend in the second quarter of each fiscal year based on the ventures' performance for the preceding year. In 2012, 2011 and 2010, we received cash dividends of \$83 million, \$78 million and \$71 million, respectively.

During 2012, our venture's Nantong facility completed an expansion of its acetate flake and acetate tow capacity, each by 30,000 tons. We made contributions of \$29 million over three years related to the capacity expansion in Nantong. Similar expansions since the ventures were formed have led to earnings growth and increased dividends for the Company.

According to the Euromonitor database services, China is estimated to have a 42% share of the world's 2011 cigarette consumption and is the fastest growing area for cigarette consumption at an estimated growth rate of 3.5% per year from 2011 through 2016. Combined, these ventures are a leader in Chinese domestic acetate production and we believe we are well positioned to supply Chinese cigarette producers.

Although our ownership interest in each of our China acetate ventures exceeds 20%, we account for these investments using the cost method of accounting because we determined that we cannot exercise significant influence over these entities due to local government investment in and influence over these entities, limitations on our involvement in the day-to-day operations and the present inability of the entities to provide timely financial information prepared in accordance with generally accepted accounting principles in the United States ("US GAAP").

Other Equity Method Investments

InfraServs. We hold indirect ownership interests in several German InfraServ Groups that own and develop industrial parks and provide on-site general and administrative support to tenants. Our ownership interest in the equity investments in InfraServ ventures are as follows:

	As of December 31, 2012 (In percentages)
InfraServ GmbH & Co. Gendorf KG	39
InfraServ GmbH & Co. Knapsack KG	27
InfraServ GmbH & Co. Hoechst KG	32

Raw Materials and Energy

We purchase a variety of raw materials and energy from sources in many countries for use in our production processes. We have a policy of maintaining, when available, multiple sources of supply for materials. However, some of our individual plants may have single sources of supply for some of their raw materials, such as carbon monoxide, steam and acetaldehyde. Although we have been able to obtain sufficient supplies of raw materials, there can be no assurance that unforeseen developments will not affect our raw material supply. Even if we have multiple sources of supply for a raw material, there can be no assurance that these sources can make up for the loss of a major supplier. It is also possible profitability will be adversely affected if we are required to qualify additional sources of supply to our

specifications in the event of the loss of a sole supplier. In addition, the price of raw materials varies, often substantially, from year to year.

A substantial portion of our products and raw materials are commodities whose prices fluctuate as supply and demand fundamentals change. Our production facilities rely largely on natural gas, coal, fuel oil and electricity for energy. We manage our exposure to commodity risk primarily through the use of long-term supply agreements, multi-year purchasing and sales agreements and forward purchase contracts.

We also currently purchase and lease supplies of various precious metals, such as rhodium, used as catalysts for the manufacture of Acetyl Intermediates products. For precious metals, the leases are normally distributed among multiple lessors for each product.

Research and Development

Our businesses are innovation-oriented and conduct research and development activities to develop new, and optimize existing, production technologies, as well as to develop commercially viable new products and applications. We consider the amounts spent during each of the last three fiscal years on research and development activities to be sufficient to execute our current strategic initiatives.

Intellectual Property

We attach importance to protecting our intellectual property, including through patents, trademarks, copyrights and product designs in order to preserve our investment in research and development, manufacturing and marketing. Patents may cover processes, products, intermediate products and product uses. We also seek to register trademarks as a means of protecting the brand names of our products. We protect our intellectual property against infringement and also seek to register design protection where appropriate.

Patents. In most industrial countries, patent protection exists for new substances and formulations, as well as for certain unique applications and production processes. However, we do business in regions of the world where intellectual property protection may be limited and difficult to enforce. We maintain strict information security policies and procedures wherever we do business. Such information security policies and procedures include data encryption, controls over the disclosure and safekeeping of confidential information, as well as employee awareness training. Moreover, we monitor competitive developments and defend against infringements on our intellectual property rights.

Trademarks. AOPlus[®], AOPlus[®]2, AOPlus[®]3, VAntage[®], VAntagePlus[™], VAntage[®]2, BuyTiconaDirect[™], Celanex[®], Celcon[®], Celstran[®], CelFX[™], Celvolit[®], Clarifoil[®], Compel[®], GUR[®], Hostaform[®], Impet[®], Mowilith[®], Nutrinova[®], Riteflex[®], Sunett[®], SunsationSM, Thermx[®], Zenite[®], Vandar[®], Vectra[®], Vinamul[®], EcoVAE[®], Duroset[®], Ateva[®], Acetex[®], TCX[®], VitalDose[®], BriteCoat[®] and certain other branded products and services named in this document are registered or reserved trademarks or service marks owned or licensed by Celanese. The foregoing is not intended to be an exhaustive or comprehensive list of all registered or reserved trademarks and service marks owned or licensed by Celanese. Fortron[®] is a registered trademark of Fortron.

Neither Celanese nor any particular business segment is materially dependent upon any one patent, trademark, copyright or trade secret.

Environmental and Other Regulation

Matters pertaining to environmental and other regulations are discussed in Item 1A. Risk Factors, Item 7.

Management's Discussion and Analysis of Financial Condition and Results of Operations – Critical Accounting Policies and Estimates – Accounting for Commitments and Contingencies, and Note 15 - Environmental and Note 23 - Commitments and Contingencies in the accompanying consolidated financial statements.

Employees

The approximate number of employees employed by Celanese on a continuing basis throughout the world is as follows:

	Employees as of December 31, 2012
North America	
US	2,750
Canada	250
Mexico	600
Total	3,600
Europe	
Germany	1,600
Other Europe	1,250
Total	2,850
Asia	1,050
Rest of World	50
Total	7,550

Backlog

We do not consider backlog to be a significant indicator of the level of future sales activity. In general, we do not manufacture our products against a backlog of orders. Production and inventory levels are based on the level of incoming orders as well as projections of future demand. Therefore, we believe that backlog information is not material to understanding our overall business and should not be considered a reliable indicator of our ability to achieve any particular level of revenue or financial performance.

Available Information — Securities and Exchange Commission ("SEC") Filings and Corporate Governance Materials

We make available free of charge, through our internet website (<http://www.celanese.com>), our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934, as well as ownership reports on Form 3 and Form 4, as soon as reasonably practicable after electronically filing such material with, or furnishing it to, the SEC. References to our website in this report are provided as a convenience, and the information on our website is not, and shall not be deemed to be a part of this report or incorporated into any other filings we make with the SEC.

The SEC maintains an internet site that contains reports, proxy and information statements, and other information regarding issuers, including Celanese Corporation, that electronically file with the SEC at <http://www.sec.gov>.

We also make available free of charge, through our internet website, our Corporate Governance Guidelines of our Board of Directors and the charters of each of the committees of the Board.

Item 1A. Risk Factors

Many factors could have an effect on our financial condition, cash flows and results of operations. We are subject to various risks resulting from changing economic, environmental, political, industry, business, financial and regulatory conditions. The factors described below represent our principal risks.

Risks Related to Our Business

We are a company with operations around the world and are exposed to general economic, political and regulatory conditions and risks in the countries in which we have significant operations.

We operate globally and have customers in many countries. Our major facilities are primarily located in North America, Europe and Asia, and we hold interests in ventures that operate in the US, Germany, China, Japan, Malaysia, South Korea, Taiwan and Saudi Arabia. Our principal customers are similarly global in scope, and the prices of our most significant products are typically world market prices. Also, our operations in certain foreign jurisdictions are subject to nationalization and

expropriation risk, and some of our contractual relationships within these jurisdictions are subject to cancellation without full compensation for loss. In certain cases where we benefit from local government subsidies or other undertakings, such benefits are subject to the solvency of local government entities and are subject to termination without meaningful recourse or remedies. Consequently, our business and financial results are affected, directly and indirectly, by world economic, political and regulatory conditions.

In addition to the worldwide economic downturn, conditions such as the uncertainties associated with war, terrorist activities, civil unrest, epidemics, pandemics, weather, natural disasters, the effects of climate change or political instability in any of the countries in which we operate or have significant customers or suppliers could affect us by causing delays or losses in the supply or delivery of raw materials and products, as well as increasing security costs, insurance premiums and other expenses. These conditions could also result in or lengthen economic recession in the United States, Europe, Asia or elsewhere.

Failure to comply with applicable laws, rules, regulations or court decisions could expose us to fines, penalties and other costs. Moreover, changes in laws or regulations, such as unexpected changes in regulatory requirements (including import or export licensing requirements), or changes in the reporting requirements of the United States, Canadian, Mexican, German, European Union ("EU") or Asian governmental agencies, could increase the cost of doing business in these regions. Any of these conditions may have an effect on our business and financial results as a whole and may result in volatile current and future prices for our securities, including our stock.

In particular, we have invested significant resources in China and other Asian countries. This region's growth may slow, and we may fail to realize the anticipated benefits associated with our investment there and our financial results may be adversely impacted.

In addition, we have significant operations and financial relationships based in Europe. Europe has historically accounted for over one-third of our net revenues and more than 40% in 2012. The European sovereign debt crisis and bank funding pressures in the Eurozone may continue to negatively impact our overall financial results due to reduced economic growth and resulting decreased end-use customer demand.

As of December 31, 2012, we held \$189 million in cash in Europe. This cash is primarily invested in deposits in several European banks, a European money market fund that invests only in highly rated and liquid European sovereign debt and a US Treasury money market fund. The allocation of the cash invested in each of these options fluctuates based on market conditions. As of December 31, 2012, we also had \$75 million of direct investments in highly rated European sovereign debt in our pension funds, accounting for less than 3% of our total pension fund assets, that may be affected if European economic conditions worsen. Finally, our ability to access additional liquidity from European financial institutions in the future may also be impaired.

We are subject to risks associated with the increased volatility in the prices and availability of key raw materials and energy, which could have a significant adverse effect on the margins of our products and our financial results.

We purchase significant amounts of ethylene, methanol, carbon monoxide and natural gas from third parties primarily for use in our production of basic chemicals in the Acetyl Intermediates segment, principally acetic acid, VAM and formaldehyde. We use a portion of our output of these chemicals, in turn, as inputs in the production of downstream products in all our business segments. We also purchase some of these raw materials for use in our Industrial Specialties segment, primarily for VAE and EVA production, as well as significant amounts of wood pulp for use in our production of cellulose acetate in our Consumer Specialties segment. The price of many of these items is dependent on the available supply of that item and may increase significantly as a result of natural disasters, plant or production disruptions, strikes or other labor unrest, war or other outbreak of hostilities or terrorism, breakdown or degradation of transportation infrastructure used for delivery of strategic raw materials and energy commodities, or changes in laws or regulations. In particular, to the extent of our vertical integration in the production of chemicals, shortages in the availability of raw material chemicals, such as natural gas, ethylene and methanol, or the loss of our dedicated supplies of carbon monoxide, may have an increased adverse impact on us as it can cause a shortage in intermediate and finished products. Such shortages would adversely impact our ability to produce certain products and increase our costs resulting in reduced margins and adverse financial results.

We are exposed to volatility in the prices of our raw materials and energy. Although we have agreements providing for the supply of ethylene, methanol, carbon monoxide, wood pulp, natural gas, electricity and fuel oil, the contractual prices for these raw materials and energy can vary with economic conditions and may be highly volatile. In addition to the factors noted above that may impact supply or price, factors that have caused volatility in our raw material prices in the past and which may do so in the future include:

17

- Shortages of raw materials due to increasing demand, e.g., from growing uses or new uses;
- Capacity constraints, e.g., due to construction delays, labor disruption or involuntary shutdowns;
- The inability of a supplier to meet our delivery orders or a supplier's choice not to fulfill orders or to terminate a supply contract or our inability to obtain or renew supply contracts on favorable terms;
- The general level of business and economic activity; and
- The direct or indirect effect of governmental regulation (including the impact of government regulation relating to climate change).

If we are not able to fully offset the effects of higher energy and raw material costs through price increases, productivity improvements or cost reduction programs, or if such commodities become unavailable, it could have a significant adverse effect on our ability to timely and profitably manufacture and deliver our products with a resulting reduction in our margins and financial results.

A portion of our supply of methanol in North America is currently obtained under a contract expiring in 2015. If we are unable to obtain a reliable source of supply prior to expiration of the contract, we will likely purchase methanol on the open market. We currently plan to construct a methanol plant in the US to partially replace the methanol obtained under that contract.

Production at our manufacturing facilities could be disrupted for a variety of reasons, which could prevent us from producing enough of our products to maintain our sales and satisfy our customers' demands.

A disruption in production at one or more of our manufacturing facilities could have a material adverse effect on our business. Disruptions could occur for many reasons, including fire, natural disasters, weather, unplanned maintenance or other manufacturing problems, disease, strikes or other labor unrest, transportation interruption, government regulation, political unrest or terrorism. Alternative facilities with sufficient capacity or capabilities may not be available, may cost substantially more or may take a significant time to start production, each of which could negatively affect our business and financial performance. If one of our key manufacturing facilities is unable to produce our products for an extended period of time, our sales may be reduced by the shortfall caused by the disruption and we may not be able to meet our customers' needs, which could cause them to seek other suppliers. In particular, production disruptions at our manufacturing facilities that produce chemicals used as inputs in the production of chemicals in other business segments, such as acetic acid, VAM and formaldehyde, could have a more significant adverse effect on our business and financial performance and results of operation to the extent of such vertical integration. Furthermore, to the extent a production disruption occurs at a manufacturing facility that has been operating at or near full capacity, the resulting shortage of our product could be particularly harmful because production at the manufacturing facility may not be able to reach levels achieved prior to the disruption.

Failure to develop new products and production technologies or to implement productivity and cost reduction initiatives successfully may harm our competitive position.

Our operating results depend significantly on the development of commercially viable new products, product grades and applications, as well as process technologies, free of any legal restrictions. If we are unsuccessful in developing new products, applications and production processes in the future, our competitive position and operating results may be negatively affected. For example, we recently announced our intention to construct new ethanol manufacturing facilities in China and the US that will utilize advanced technology developed with elements of our proprietary advanced acetyl platform. However, as we invest in the commercialization of this new process technology, we face the risk of unanticipated operational or commercialization difficulties, including an inability to obtain necessary permits or governmental approvals, the development of competing technologies, failure of facilities or processes to operate in accordance with specifications or expectations, construction delays, cost over-runs, the unavailability of financing, required materials or equipment and various other factors. Likewise, we have undertaken and are continuing to undertake initiatives in all business segments to improve productivity and performance and to generate cost savings. These initiatives may not be completed or beneficial or the estimated cost savings from such activities may not be realized.

Our business is exposed to risks associated with the creditworthiness of our suppliers, customers and business partners and the industries in which our suppliers, customers and business partners participate are cyclical in nature, both of

which may adversely affect our business and results of operations.

Some of the industries in which our end-use customers participate, such as the automotive, electrical, construction and textile industries, are cyclical in nature, thus posing a risk to us which is beyond our control. The industries in which these customers

participate are highly competitive, to a large extent driven by end-use applications, and may experience overcapacity, all of which may affect demand for and pricing of our products. Our business is exposed to risks associated with the creditworthiness of our key suppliers, customers and business partners and reductions in demand for our customers' products. The consequences of this could include the interruption of production at the facilities of our customers, the reduction, delay or cancellation of customer orders, delays in or the inability of customers to obtain financing to purchase our products, delays or interruptions of the supply of raw materials we purchase and bankruptcy of customers, suppliers or other creditors. The occurrence of any of these events may adversely affect our cash flow, profitability and financial condition. Furthermore, the continuing European sovereign debt crisis could increase the likelihood and impact of these events for our European customers by potentially limiting end-use customer demand and restricting our customers' access to capital, which could continue to negatively affect our financial results. Environmental regulations and other obligations relating to environmental matters could subject us to liability for fines, clean-ups and other damages, require us to incur significant costs to modify our operations and increase our manufacturing and delivery costs.

Costs related to our compliance with environmental laws and regulations, and potential obligations with respect to sites currently or formerly owned or operated by us, may have a significant negative impact on our operating results. We also have obligations related to the indemnity agreement contained in the demerger and transfer agreement between Celanese GmbH and Hoechst AG, also referred to as the demerger agreement, for environmental matters arising out of certain divestitures that took place prior to the demerger.

Our operations are subject to extensive international, national, state, local and other laws and regulations that govern environmental and health and safety matters. We incur substantial capital and other costs to comply with these requirements. If we violate any one of those laws or regulations, we can be held liable for substantial fines and other sanctions, including limitations on our operations as a result of changes to or revocations of environmental permits involved. Stricter environmental, safety and health laws, regulations and enforcement policies could result in substantial costs and liabilities to us or limitations on our operations and could subject our handling, manufacture, transport, use, reuse or disposal of substances or pollutants to more rigorous scrutiny than at present.

One example of such regulations is the National Emission Standard for Hazardous Air Pollutants for Industrial, Commercial, and Institutional Boilers and Process Heaters ("Boiler MACT"), which was published by the Environmental Protection Agency ("EPA") in the Federal Register on March 21, 2011. EPA issued a revised final rule on December 20, 2012. The Boiler MACT regulation will require us to make significant capital expenditures to comply with stricter emissions requirements for industrial boilers and process heaters at our facilities in the next three to four years. Consequently, compliance with these laws and regulations may negatively affect our earnings and cash flows in a particular reporting period.

Changes in environmental, health and safety regulations in the jurisdictions where we manufacture and sell our products could lead to a decrease in demand for our products.

New or revised governmental regulations and independent studies relating to the effect of our products on health, safety and the environment may affect demand for our products and the cost of producing our products.

In June 2009, the California Office of Environmental Health Hazard Assessment ("OEHHA") formally proposed to add VAM, along with 11 other substances, to a list of chemicals "known to the state of California" to cause cancer. OEHHA is required to maintain this list under the Safe Drinking Water and Toxic Enforcement Act of 1986 ("Proposition 65"). Celanese successfully defeated the attempt to list VAM through a judicial challenge that is now final, and OEHHA has withdrawn VAM from its list of proposed chemicals for the Proposition 65 list. However, OEHHA initially proposed VAM to the Proposition 65 list as a result of a lawsuit by an environmental group. Activists may again seek to require OEHHA to consider listing VAM or other chemicals on the Proposition 65 list. In addition, VAM or other chemicals we produce may be classified in other jurisdictions in a manner that would adversely affect demand for such products.

We are a producer of formaldehyde and plastics derived from formaldehyde. Several studies have investigated possible links between formaldehyde exposure and various end points including leukemia. The International Agency for Research on Cancer ("IARC"), a private research agency, has reclassified formaldehyde from Group 2A (probable

human carcinogen) to Group 1 (known human carcinogen) based on studies linking formaldehyde exposure to nasopharyngeal cancer, a rare cancer in humans. In October 2009, IARC also concluded based on a recent study that there is sufficient evidence for a causal association between formaldehyde and the development of leukemia. We expect the results of IARC's review will be examined and considered by government agencies with responsibility for setting worker and environmental exposure standards and labeling requirements.

Other pending initiatives will potentially require toxicological testing and risk assessments of a wide variety of chemicals, including chemicals used or produced by us. These initiatives include the Voluntary Children's Chemical Evaluation Program, High Production Volume Chemical Initiative and expected modifications to the Toxic Substances Control Act ("TSCA") in the United States, as well as various European Commission programs, such as the Registration, Evaluation, Authorization and Restriction of Chemicals ("REACH").

The above-mentioned assessments in the United States and Europe may result in heightened concerns about the chemicals involved and additional requirements being placed on the production, handling, labeling or use of the subject chemicals. Such concerns and additional requirements could also increase the cost incurred by our customers to use our chemical products and otherwise limit the use of these products, which could lead to a decrease in demand for these products. Such a decrease in demand would likely have an adverse impact on our business and results of operations.

US federal regulations aimed at increasing security at certain chemical production plants and similar legislation that may be proposed in the future, if passed into law, may increase our operating costs and cause an adverse effect on our results of operations.

Regulations are being implemented by the US Department of Homeland Security ("DHS") aimed at decreasing the risk, and effects, of potential terrorist attacks on chemical plants located within the United States. Pursuant to these regulations, these goals would be accomplished in part through the requirement that certain high-priority facilities develop a prevention, preparedness, and response plan after conducting a vulnerability assessment. In addition, companies may be required to evaluate the possibility of using less dangerous chemicals and technologies as part of their vulnerability assessments and security plans and implementing feasible safer technologies in order to minimize potential damage to their facilities from a terrorist attack. We have registered certain of our sites with DHS in accordance with these regulations, have conducted vulnerability assessments at applicable sites and are awaiting DHS review and approval of security plans. Until that is done we cannot determine with certainty the costs associated with any security measures that DHS may require.

We are subject to risks associated with possible climate change legislation, regulation and international accords. Greenhouse gas emissions have become the subject of a large amount of international, national, regional, state and local attention. Cap and trade initiatives to limit greenhouse gas emissions have been introduced in the EU. The EPA has promulgated rules concerning greenhouse gas emissions. In addition, regulation of greenhouse gas also could occur pursuant to future US treaty obligations, statutory or regulatory changes under the Clean Air Act or new climate change legislation.

While not all are likely to become law, many countries are considering or have implemented regulatory programs to reduce greenhouse gas emissions. Future environmental legislative and regulatory developments related to climate change are possible, which could materially increase operating costs in the chemical industry and thereby increase our manufacturing and delivery costs.

Our business exposes us to potential product liability claims and recalls, which could adversely affect our financial condition and performance.

The development, manufacture and sales of specialty chemical products by us, including products produced for the food, beverage, cigarette, automobile, medical device and pharmaceutical industries, involve a risk of exposure to product liability claims, product recalls, product seizures and related adverse publicity. A product liability claim or judgment against us could also result in substantial and unexpected expenditures, affect consumer or customer confidence in our products, and divert management's attention from other responsibilities. Although we maintain product liability insurance, there can be no assurance that this type or the level of coverage is adequate or that we will be able to continue to maintain our existing insurance or obtain comparable insurance at a reasonable cost, if at all. A product recall or a partially or completely uninsured judgment against us could have a material adverse effect on our results of operations or financial condition. Although we have standard contracting policies and controls, we may not always be able to contractually limit our exposure to third party claims should our failure to perform result in downstream supply disruptions or product recalls.

Our production facilities handle the processing of some volatile and hazardous materials that subject us to operating risks that could have a negative effect on our operating results.

Our operations are subject to operating risks associated with chemical manufacturing, including the related storage and transportation of raw materials, finished products and waste. These risks include, among other things, pipeline and storage tank leaks and ruptures, explosions and fires and discharges or releases of toxic or hazardous substances.

These operating risks can cause personal injury, property damage and environmental contamination, and may result in the shutdown of affected facilities and the imposition of civil or criminal penalties. The occurrence of any of these events may disrupt production and have a negative effect on the productivity and profitability of a particular manufacturing facility and our operating results and cash flows.

Our business and financial results may be adversely affected by various legal and regulatory proceedings.

We are subject to legal and regulatory proceedings, lawsuits and claims in the normal course of business and could become subject to additional claims in the future, some of which could be material. The outcome of existing proceedings, lawsuits and claims may differ from our expectations because the outcomes of litigation, including regulatory matters, are often difficult to reliably predict. Various factors or developments can lead us to change current estimates of liabilities and related insurance receivables where applicable, or permit us to make such estimates for matters previously not susceptible to reasonable estimates, such as a significant judicial ruling or judgment, a significant settlement, significant regulatory developments, or changes in applicable law. A future adverse ruling, settlement, or unfavorable development could result in charges that could have a material adverse effect on our business, results of operations or financial condition in any particular period. For a more detailed discussion of our legal proceedings, see Item 3. Legal Proceedings below.

Changes in tax legislation throughout the world could materially impact our results.

Our future effective tax rate and related tax balance sheet attributes could be impacted by changes in tax legislation throughout the world. In particular, proposed US tax legislation could materially impact our results. Currently, the majority of our revenue is generated from customers located outside of the US, and a substantial portion of our assets and employees are located outside of the US. We have not accrued income taxes and foreign withholding taxes on undistributed earnings for most non-US subsidiaries, because those earnings are intended to be indefinitely reinvested in the operations of those subsidiaries. Certain proposals could substantially increase our tax expense, which would substantially reduce our income and have a material adverse effect on our results of operations and cash flows from operating activities.

Changes in our tax rates could affect our future results.

Our future effective tax rates could be affected by changes in the mix of earnings in countries with differing statutory tax rates, expirations of tax holidays, changes in the valuation of deferred tax assets and liabilities, or changes in tax laws and regulations or their interpretation. We are subject to the regular examination of our income tax returns by various tax authorities. We regularly assess the likelihood of adverse outcomes resulting from these examinations to determine the adequacy of our provision for taxes. There can be no assurance that the outcomes from these examinations will not have a material adverse effect on our financial condition and operating results.

Our success depends upon our ability to attract and retain key employees and the identification and development of talent to succeed senior management.

Our success depends on our ability to attract and retain key personnel, and we rely heavily on our management team. The inability to recruit and retain key personnel or the unexpected loss of key personnel may adversely affect our operations. In addition, because of the reliance on our management team, our future success depends in part on our ability to identify and develop talent to succeed senior management. The retention of key personnel and appropriate senior management succession planning will continue to be critically important to the successful implementation of our strategies.

Some of our employees are unionized, represented by workers councils or are subject to local laws that are less favorable to employers than the laws of the US.

As of December 31, 2012, we had approximately 7,550 employees. Approximately 19% of our 2,750 US based employees are unionized. Our two US based collective bargaining agreements expire in 2014 and 2016. In addition, a large number of our employees are employed in countries in which employment laws provide greater bargaining or other employment rights than the laws of the US. Such employment rights require us to work collaboratively with the legal representatives of the employees to effect any changes to labor agreements. Most of our employees in Europe are represented by workers councils and/or unions that must approve any changes in terms and conditions of employment, including potentially salaries and benefits. They may also impede efforts to restructure our workforce. Although we

believe we have a good working relationship with our employees and their legal representatives and the chances are low, a strike, work stoppage, or slowdown by our employees could occur, resulting in a disruption of our operations or higher ongoing labor costs.

21

We may not be able to complete future acquisitions or successfully integrate future acquisitions into our business, which could affect adversely our business or results of operations.

As part of our growth strategy, we intend to pursue acquisitions and joint venture opportunities. Successful accomplishment of this objective may be limited by the availability and suitability of acquisition candidates and by our financial resources, including available cash and borrowing capacity. Acquisitions involve numerous risks, including difficulty determining appropriate valuation, integrating operations, technologies, services and products of the acquired lines or businesses, personnel turnover and the diversion of management's attention from other business matters. In addition, we may be unable to achieve anticipated benefits from these acquisitions in the timeframe that we anticipate, or at all, which could affect adversely our business or results of operations.

Our significant non-US operations expose us to global exchange rate fluctuations that could adversely impact our profitability.

Because we conduct a significant portion of our operations outside the United States, fluctuations in currencies of other countries, especially the Euro, may materially affect our operating results. For example, changes in currency exchange rates may decrease our profits in comparison to the profits of our competitors on the same products sold in the same markets and increase the cost of items required in our operations.

A substantial portion of our net sales is denominated in currencies other than the US dollar. In our consolidated financial statements, we translate our local currency financial results into US dollars based on average exchange rates prevailing during a reporting period or the exchange rate at the end of that period. During times of a strengthening US dollar our reported international sales, earnings, assets and liabilities will be reduced because the local currency will translate into fewer US dollars.

In addition to currency translation risks, we incur a currency transaction risk whenever one of our operating subsidiaries enters into either a purchase or a sales transaction using a currency different from the operating subsidiary's functional currency. Given the volatility of exchange rates, we may not be able to manage our currency transaction and translation risks effectively, and volatility in currency exchange rates may expose our financial condition or results of operations to a significant additional risk. Since a portion of our indebtedness is and will be denominated in currencies other than US dollars, a weakening of the US dollar could make it more difficult for us to repay our indebtedness denominated in foreign currencies unless we have cash flows in those foreign currencies from our foreign operations to repay such indebtedness.

We use financial instruments to hedge certain exposure to foreign currency fluctuations, but we cannot guarantee that our hedging strategies will be effective. In addition, the use of financial instruments creates counterparty settlement risk. Failure to effectively manage these risks could have an adverse impact on our financial position, results of operations and cash flows.

Significant changes in pension fund investment performance or assumptions relating to pension costs may have a material effect on the valuation of pension obligations, the funded status of pension plans and our pension cost. The cost of our pension plans is incurred over long periods of time and involves many uncertainties during those periods of time. Our funding policy for pension plans is to accumulate plan assets that, over the long run, will approximate the present value of projected benefit obligations. Our pension cost is materially affected by the discount rate used to measure pension obligations, the level and value of plan assets available to fund those obligations at the measurement date and the expected long-term rate of return on plan assets. Significant changes in investment performance or a change in the portfolio mix of invested assets will likely result in corresponding increases and decreases in the valuation of plan assets and a change in the discount rate will likely result in an increase or decrease in the valuation of pension obligations. The combined impact of these changes will affect the reported funded status of our pension plans as well as the net periodic pension cost in the following fiscal years. In recent years, an extended duration strategy in the asset portfolio has been implemented in some plans to reduce the influence of liability volatility due to changes in interest rates. If the funded status of a pension plan declines, we may be required to make unscheduled contributions in addition to those contributions for which we have already planned.

Our future success depends in part on our ability to protect our intellectual property rights. Our inability to protect and enforce these rights could reduce our ability to maintain our market position and our profit margins.

We attach importance to our patents, trademarks, copyrights, know-how and trade secrets in order to protect our investment in research and development, and competitive commercial positions in manufacturing and marketing of our products. We have also adopted internal policies for protecting our valuable know-how and trade secrets. We sometimes license patents and other technology from third parties. Our practice is to seek protection for significant developments that provide us competitive

advantages and freedom to practice for our businesses. Patents may cover catalysts, processes, products, intermediate products and product uses. These patents are usually filed throughout the world and provide varying periods and scope of protection based on the filing date and the type of patent application. The legal life and scope of protections provided by patents may vary between countries in which we seek protection. As patents expire, the catalysts, processes and products described and claimed in those patents may become generally available for use by the public subject to our continued protection for associated know-how and trade secrets. We also seek to register trademarks as a means of protecting the brand names of our products, which brand names become more important once the corresponding product or process patents have expired. We operate in regions of the world where intellectual property protection may be limited and difficult to enforce and our continued growth strategy may bring us to additional regions with similar challenges. If we are not successful in protecting or maintaining our patent, license, trademark or other intellectual property rights, our revenues, results of operations and cash flows may be adversely affected. We are subject to information technology security threats that could materially affect our business.

We have been and will continue to be subject to advanced persistent information technology security threats. While some unauthorized access to our information technology systems occurs, we believe to date these threats have not had a material impact on our business. We seek to detect and investigate these security incidents and to prevent their recurrence but in some cases we might be unaware of an incident or its magnitude and effects. The theft, mis-use or publication of our intellectual property and/or confidential business information or the compromising of our systems or networks could harm our competitive position, cause operational disruption, reduce the value of our investment in research and development of new products and other strategic initiatives or otherwise adversely affect our business or results of operations. To the extent that any security breach results in inappropriate disclosure of our employees', customers' or vendors' confidential information, we may incur liability as a result. Although we attempt to mitigate these risks by employing a number of measures, including monitoring of our systems and networks, and maintenance of backup and protective systems, our systems, networks, products and services remain potentially vulnerable to increasingly sophisticated advanced persistent threats that may have a material effect on our business. In addition, the devotion of additional resources to the security of our information technology systems in the future could significantly increase the cost of doing business or otherwise adversely impact our financial results.

We may incur significant charges in the event we close or divest all or part of a manufacturing plant or facility. We periodically assess our manufacturing operations in order to manufacture and distribute our products in the most efficient manner. Based on our assessments, we may make capital improvements to modernize certain units, move manufacturing or distribution capabilities from one plant or facility to another plant or facility, discontinue manufacturing or distributing certain products or close or divest all or part of a manufacturing plant or facility. We also have shared services agreements at several of our plants and if such agreements are terminated or revised, we would assess and potentially adjust our manufacturing operations. The closure or divestiture of all or part of a manufacturing plant or facility could result in future charges that could be significant.

Provisions in our certificate of incorporation and bylaws, as well as any stockholders' rights plan, may discourage a takeover attempt.

Provisions contained in our certificate of incorporation and bylaws could make it more difficult for a third party to acquire us, even if doing so might be beneficial to our stockholders. Provisions of our certificate of incorporation and bylaws impose various procedural and other requirements, which could make it more difficult for stockholders to effect certain corporate actions. For example, our certificate of incorporation authorizes our Board of Directors to determine the rights, preferences, privileges and restrictions of unissued series of preferred stock, without any vote or action by our stockholders. Thus, our Board of Directors can authorize and issue shares of preferred stock with voting or conversion rights that could adversely affect the voting or other rights of holders of our Series A common stock. These rights may have the effect of delaying or deterring a change of control of our Company. In addition, a change of control of our Company may be delayed or deterred as a result of our having three classes of directors (each class elected for a three year term) or as a result of any stockholders' rights plan that our Board of Directors may adopt. These provisions could limit the price that certain investors might be willing to pay in the future for shares of our Series A common stock.

We could be subject to damages based on claims brought against us by our customers or lose customers as a result of the failure of our products to meet certain quality specifications.

Our products provide important performance attributes to our customers' products. If a product fails to perform in a manner consistent with quality specifications, a customer could seek replacement of the product or damages for costs incurred as a result of the product failing to perform as guaranteed. A successful claim or series of claims against us could have a material adverse effect on our financial condition and results of operations and could result in a loss of one or more key customers.

The insurance coverage that we maintain may not fully cover all operational risks.

We maintain property, business interruption and casualty insurance but such insurance may not cover all of the risks associated with the hazards of our business and is subject to limitations, including deductibles and maximum liabilities covered. We may incur losses beyond the limits, or outside the coverage, of our insurance policies, including liabilities for environmental remediation. In the future, there can be no assurance that the types of insurance we obtain or the level of coverage we maintain is adequate or that we will be able to continue to maintain our existing insurance or obtain comparable insurance at a reasonable cost, if at all.

Differences in views with our joint venture participants may cause our joint ventures not to operate according to their business plans, which may adversely affect our results of operations.

We currently participate in a number of joint ventures and may enter into additional joint ventures in the future. The nature of a joint venture requires us to share control with unaffiliated third parties. Differences in views among joint venture participants may result in delayed decisions or failure to agree on major decisions. If these differences cause the joint ventures to deviate from their business plans or to fail to achieve their desired operating performance, our results of operations could be adversely affected.

Risks Related to Our Indebtedness

Our level of indebtedness could diminish our ability to raise additional capital to fund our operations, limit our ability to react to changes in the economy or the chemicals industry and prevent us from meeting obligations under our indebtedness.

Our total indebtedness is \$3.1 billion as of December 31, 2012. See Note 13 - Debt in the accompanying consolidated financial statements for further information.

Our level of indebtedness could have important consequences, including:

Increasing our vulnerability to general economic and industry conditions including exacerbating the impact of any adverse business effects that are determined to be material adverse events under our existing senior credit facilities (the "Senior Credit Agreement");

Requiring a substantial portion of cash flow from operations to be dedicated to the payment of principal and interest on indebtedness, therefore reducing our ability to use our cash flow to fund operations, capital expenditures and future business opportunities or pay dividends on our common stock;

Exposing us to the risk of increased interest rates as certain of our borrowings are at variable rates of interest;

Limiting our ability to obtain additional financing for working capital, capital expenditures, product development, debt service requirements, acquisitions and general corporate or other purposes; and

Limiting our ability to adjust to changing market conditions and placing us at a competitive disadvantage compared to our competitors who have less debt.

We may incur additional indebtedness in the future, which could increase the risks described above.

Although covenants under the Senior Credit Agreement and the indentures governing the \$600 million in aggregate principal amount of 6.625% Senior Notes due 2018, the \$400 million in aggregate principal amount of 5.875% Senior Notes due 2021, and the \$500 million in aggregate principal amount of 4.625% Senior Notes due 2022 (together, the "Notes") limit our ability to incur certain additional indebtedness, these restrictions are subject to a number of qualifications and exceptions, and the indebtedness we could incur in compliance with these restrictions could be significant. To the extent that we incur additional indebtedness, the risks associated with our debt described above, including our possible inability to service our debt, including the Notes, would increase.

Our variable rate indebtedness subjects us to interest rate risk, which could cause our debt service obligations to increase significantly and affect our operating results.

Certain of our borrowings are at variable rates of interest and expose us to interest rate risk. If interest rates were to increase, our debt service obligations on our variable rate indebtedness would increase. As of December 31, 2012, we had \$781 million, €214 million and CNY680 million of variable rate debt and outstanding US-dollar interest rate swap agreements with a

notional value of \$1.1 billion that expire January 2, 2014. These interest rate swap agreements have the economic effect of modifying the US-dollar variable rate obligations into fixed interest obligations. Accordingly, a 1% increase in interest rates would increase annual interest expense by \$1 million.

On February 1, 2012, we executed forward-starting interest rate swap agreements with a notional value of \$500 million which are effective January 2, 2014 through January 2, 2016. See Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations - Liquidity and Capital Resources, Item 7A. Quantitative and Qualitative Disclosures About Market Risk below and Note 21 - Derivative Financial Instruments in the accompanying consolidated financial statements for further information.

We may not be able to generate sufficient cash to service our indebtedness and may be forced to take other actions to satisfy obligations under our indebtedness, which may not be successful.

Our ability to make scheduled payments on or to refinance our debt obligations depends on the financial condition and operating performance of our subsidiaries, which are subject to prevailing economic and competitive conditions and to certain financial, business and other factors beyond our control. We may not be able to maintain a level of cash flows from operating activities sufficient to permit us to pay the principal, premium, if any, and interest on our indebtedness. If our cash flows and capital resources are insufficient to fund our debt service obligations, we may be forced to reduce or delay capital expenditures, sell assets, seek additional capital or restructure or refinance our indebtedness. These alternative measures may not be successful and may not permit us to meet our scheduled debt service obligations. In the absence of such operating results and resources, we could face substantial liquidity problems and might be required to dispose of material assets or operations to meet our debt service and other obligations. The Senior Credit Agreement restricts our ability to dispose of assets and use the proceeds from the disposition. We may not be able to consummate those dispositions or to obtain the proceeds which we could realize from them and these proceeds may not be adequate to meet any debt service obligations then due.

Restrictive covenants in our debt agreements may limit our ability to engage in certain transactions and may diminish our ability to make payments on our indebtedness.

The Senior Credit Agreement and the indentures governing the Notes each contain various covenants that limit our ability to engage in specified types of transactions. The indentures governing the Notes limit Celanese US's and certain of its subsidiaries' ability to, among other things, incur additional debt; pay dividends or make other restricted payments; consummate specified asset sales; enter into transactions with affiliates; incur liens, impose restrictions on the ability of a subsidiary to pay dividends or make payments to Celanese US and its restricted subsidiaries; merge or consolidate with any other person; and sell, assign, transfer, lease, convey or otherwise dispose of all or substantially all of Celanese US's assets or the assets of its restricted subsidiaries.

In addition, the Senior Credit Agreement requires us to maintain a maximum first lien senior secured leverage ratio if there are outstanding borrowings or letters of credit issued under the revolving credit facility. Our ability to meet this financial ratio can be affected by events beyond our control, and we may not be able to meet this test at all.

Such restrictions in our debt instruments could result in us having to obtain the consent of holders of the Notes and of our lenders in order to take certain actions. Disruptions in credit markets may prevent us from obtaining or make it more difficult or more costly for us to obtain such consents. Our ability to expand our business or to address declines in our business may be limited if we are unable to obtain such consents.

A breach of any of these covenants could result in a default, which, if not cured or waived, could have a material adverse effect on our business, financial condition and results of operations. Furthermore, a default under the Senior Credit Agreement could permit lenders to accelerate the maturity of our indebtedness under the Senior Credit Agreement and to terminate any commitments to lend. If we were unable to repay or refinance such indebtedness, the lenders under the Senior Credit Agreement could proceed against the collateral granted to them to secure that indebtedness. Our subsidiaries have pledged a significant portion of our assets as collateral to secure our indebtedness under the Senior Credit Agreement. If the lenders under the Senior Credit Agreement accelerate the repayment of such indebtedness, we may not have sufficient assets to repay such amounts or our other indebtedness, including the Notes. In such event, we could be forced into bankruptcy or liquidation.

Celanese and Celanese US are holding companies and depend on subsidiaries to satisfy their obligations under the Notes and the guarantee of Celanese US's obligations under the Notes by Celanese.

As holding companies, Celanese and Celanese US conduct substantially all of their operations through their subsidiaries, which own substantially all of our consolidated assets. Consequently, the principal source of cash to pay Celanese and Celanese US's obligations, including obligations under the Notes and the guarantee of the Celanese US's obligations under the Notes by Celanese, is the cash that our subsidiaries generate from their operations. We cannot assure that our subsidiaries will be able to, or be permitted to, make distributions to enable Celanese US and/or Celanese to make payments in respect of their obligations. Each of our subsidiaries is a distinct legal entity and, under certain circumstances, applicable country or state laws, regulatory limitations and terms of our debt instruments may limit our subsidiaries' ability to distribute cash to Celanese US and Celanese. While the indentures governing the Notes limit the ability of our subsidiaries to put restrictions on paying dividends or making other intercompany payments to us, these limitations are subject to certain qualifications and exceptions, which may have the effect of significantly restricting the applicability of those limits. In the event Celanese US and/or Celanese do not receive distributions from our subsidiaries, Celanese US and/or Celanese may be unable to make required payments on the Notes, the guarantee of Celanese US's obligations under the Notes by Celanese, or our other indebtedness.

Item 1B. Unresolved Staff Comments

None.

Item 2. Properties

Description of Property

We and our affiliates own or lease numerous production and manufacturing facilities throughout the world. We also own or lease other properties, including office buildings, warehouses, pipelines, research and development facilities and sales offices. We continuously review and evaluate our facilities as a part of our strategy to optimize our business portfolio. The following table sets forth a list of our principal production and other facilities throughout the world as of December 31, 2012.

Site	Leased/Owned	Products/Functions

(1) Celanese owns the assets on this site and leases the land through the terms of a long-term land lease.

Multiple Celanese business segments conduct operations at the Nanjing facility. Celanese owns the assets on this

(2) site. Celanese also owns the land through "land use right grants" for 46 to 50 years with the right to transfer, mortgage or lease such land during the term of the respective land use right grant.

(3) Multiple Celanese business segments conduct operations at the Frankfurt Hoechst Industrial Park located in Frankfurt am Main, Germany.

(4) Multiple Celanese business segments conduct operations at the Tarragona site. Celanese owns the assets on this site and shares ownership in the land. Celanese's ownership percentage in the land is 15%.

(5) A Celanese cost method investment. Kunming Cellulose Fibers Co. Ltd. owns the assets on this site and leases the land from China National Tobacco Corporation.

(6) A Celanese cost method investment.

(7) A Celanese cost method investment. Zhuhai Cellulose Fibers Co. Ltd. owns the assets on this site and leases the land from China National Tobacco Corporation.

(8) A Celanese equity method investment.

(9) Celanese no longer manufactures acetate tow and acetate flake at the Spondon, Derby, United Kingdom site as of December 31, 2012.

Item 3. Legal Proceedings

We are involved in a number of legal and regulatory proceedings, lawsuits, claims and investigations incidental to the normal conduct of our business, relating to such matters as product liability, land disputes, commercial contracts, employment, antitrust, intellectual property, workers' compensation, chemical exposure, asbestos exposure, prior acquisitions and divestitures, past waste disposal practices and release of chemicals into the environment. The Company is actively defending those matters where it is named as a defendant. See Note 15 - Environmental and Note 23 - Commitments and Contingencies in the accompanying consolidated financial statements for a discussion of environmental matters and commitments and contingencies related to legal and regulatory proceedings.

Item 4. Mine Safety Disclosures

None.

Executive Officers of the Registrant

The names, ages and biographies of our executive officers as of February 8, 2013 are as follows:

Name	Age	Position
Mark C. Rohr	61	Chairman of the Board of Directors and Chief Executive Officer, President
Douglas M. Madden	60	Chief Operating Officer
Steven M. Sterin	41	Senior Vice President and Chief Financial Officer
Christopher W. Jensen	46	Senior Vice President, Finance
Lori A. Johnston	48	Senior Vice President, Human Resources
Gjon N. Nivica, Jr.	48	Senior Vice President, General Counsel and Corporate Secretary
Mark W. Oberle	47	Senior Vice President, Corporate Affairs
Jay C. Townsend	54	Senior Vice President, Business Strategy Development and Procurement

Mark C. Rohr has been our Chairman of the Board of Directors and Chief Executive Officer and President since April 2012 and a member of our board of directors since April 2007. He served as a director and as the Executive Chairman of Albemarle Corporation, a global developer, manufacturer and marketer of highly-engineered specialty chemicals, from September 2011 until February 2012 and previously had served as the Chairman from 2008 to 2011, President from 2000 to 2010, Chief Operating Officer from 2000 to 2002 and Chief Executive Officer from 2002 to 2011 of Albemarle. Prior to that, Mr. Rohr served as Executive Vice President - Operations of Albemarle. Before joining Albemarle, Mr. Rohr held leadership roles with companies including Occidental Chemical Corporation and The Dow Chemical Company. Mr. Rohr has served on the board of directors of Ashland Inc. since 2008, and has served as a member of its audit committee and the environmental, health & safety committee. He also serves on the board of directors and the executive committee of the American Chemical Council. Mr. Rohr received a bachelor's degree in chemistry and chemical engineering from Mississippi State University.

Douglas M. Madden has served as our Chief Operating Officer since December 2009. Prior to that time, Mr. Madden served as Corporate Executive Vice President with responsibility for the Company's Acetyl Intermediates and Industrial Specialties Segments since February 2009. He was the Executive Vice President and President, Acetate, EVA Performance Polymers and Emulsions & PVOH from 2006 through February 2009. Mr. Madden previously served as President of Celanese Acetate from October 2003 to 2006. Prior to assuming leadership for Celanese Acetate, Mr. Madden served as Vice President and General Manager of the acrylates business and head of global supply chain for Celanese Chemicals from 2000 to October 2003. Prior to 2000, Mr. Madden held various vice president level positions in finance, global procurement and business support with the Hoechst Celanese Life Sciences Group, Celanese Fibers and Celanese Chemicals businesses. In 1990, he served as business director for our GUR[®] ultra-high molecular weight polyethylene business and held prior responsibilities as director of quality management for Specialty Products. Mr. Madden started his career with American Hoechst Corporation in 1984 as manager of corporate distribution. His prior experience included operational and distribution management with Warner-Lambert and Johnson & Johnson. Mr. Madden received a bachelor's degree in business administration from the University of Illinois. On November 19, 2012, Mr. Madden provided notice of his intent to retire from the Company as Chief Operating Officer, effective March 31, 2013. The Company does not plan to appoint a successor to Mr. Madden.

Steven M. Sterin has served as our Senior Vice President and Chief Financial Officer since July 2007. Mr. Sterin previously served as our Vice President, Controller and Principal Accounting Officer from September 2005 to July 2007 and Director of Finance for Celanese Chemicals from 2003 to 2005 and Controller of Celanese Chemicals from 2004 to 2005. Prior to joining Celanese, Mr. Sterin worked for Reichhold, Inc., a subsidiary of Dainnippon Ink and Chemicals, Incorporated, beginning in 1997. There he held a variety of leadership positions in the finance organization before serving as Treasurer from 2000 to 2001 and later as Vice President of Finance, Coating Resins from 2001 to 2003. Mr. Sterin began his career at Price Waterhouse LLP, an assurance, tax and advisory services firm, currently known as PricewaterhouseCoopers LLP. Mr. Sterin, a Certified Public Accountant, graduated from the University of Texas at Austin in May 1995, receiving both a bachelor's degree in business and a master's degree in professional accounting.

Christopher W. Jensen has served as our Senior Vice President, Finance since April 2011. From August 2010 to April 2011, Mr. Jensen served as our Senior Vice President, Finance and Treasurer. Prior to August 2010, Mr. Jensen served as our Vice President and Corporate Controller from March 2009 to July 2010. From May 2008 to February 2009, he served as Vice President of Finance and Treasurer. In his current capacity, Mr. Jensen has global responsibility for corporate finance, treasury operations, insurance risk management, pensions, business planning and analysis, corporate accounting, tax and general ledger accounting. Mr. Jensen was previously the Assistant Corporate Controller from March 2007 through April 2008, where he was responsible for SEC reporting, internal reporting, and technical accounting. In his initial role at Celanese from October 2005 through March 2007, he built and directed the company's technical accounting function. From August 2004 to October 2005, Mr. Jensen worked in the inspections and registration division of the Public Company Accounting Oversight Board. He spent 13 years of his career at PricewaterhouseCoopers LLP, an assurance, tax and advisory services firm, in various positions in both the auditing and mergers & acquisitions groups. Mr. Jensen earned bachelor's and master's degrees in accounting from Brigham Young University and is a Certified Public Accountant.

Lori A. Johnston has served as our Senior Vice President, Human Resources since October 2012. Prior to joining Celanese, she was the Vice President, International Human Resources for Amgen, Inc., a biotechnology medicines company, and had served in various human resources positions of increasing importance with Amgen since 2001, except from January 2006 to April 2007 when she served as the Human Resources and Communications Director of the Michael and Susan Dell Foundation. Before joining Amgen, Ms. Johnston held a variety of leadership positions beginning in 1990 at Dell, Inc., a global information technology company, before serving as the Human Resources Director, Home and Small Business, from 1997 to 2001. Ms. Johnston earned a master's of human sciences degree from Our Lady of the Lake University and a bachelor's degree in psychology from the University of Central Oklahoma.

Gjon N. Nivica, Jr. has served as our Senior Vice President, General Counsel and Corporate Secretary since April 2009. Prior to that time, Mr. Nivica served as Vice President and General Counsel of the \$5 billion Honeywell Transportation Systems business group from 2005 to 2009, during which time he also served as Deputy General Counsel to Honeywell International Inc. Prior to that time, he was the Vice President and General Counsel to Honeywell Aerospace Electronic Systems from 2002 to 2005 and to Honeywell Engines Systems and Services from 1996 to 2002. Mr. Nivica began his career in 1989 as a corporate associate in the Los Angeles office of Gibson, Dunn & Crutcher, a global law firm, where he specialized in acquisitions, divestitures and general corporate and securities work, before becoming M&A Senior Counsel to AlliedSignal Aerospace Inc. from 1994 to 1996. Mr. Nivica received his J.D., magna cum laude, from Boston University Law School.

Mark W. Oberle has served as our Senior Vice President, Corporate Affairs since February 2010. From April 2005 to February 2010, Mr. Oberle served as our Vice President, Investor Relations. He assumed overall responsibility for global communications and public affairs in 2006. Prior to joining Celanese, Mr. Oberle was Director of Investor Relations for Navistar International Corporation, a holding company whose subsidiaries and affiliates produce commercial and military trucks, diesel engines, commercial buses and recreational vehicles, where he served also in a variety of financial and commercial roles from 1996 to 2005. Prior to that time, he was a management consultant with KPMG LLP. Mr. Oberle earned bachelor's and master's degrees in business administration from Bradley University.

Jay C. Townsend has served as our Senior Vice President, Business Strategy Development and Procurement since 2010. Mr. Townsend previously served as our Senior Vice President, Strategy and Business Development from 2007 to 2010, and as our Vice President of Business Strategy and Development from 2005 to 2006. Mr. Townsend joined Celanese in 1986 as a Business Analyst and has held several roles of increasing responsibility within the US and Europe. Mr. Townsend received his bachelor's degree in international finance from Widener University in 1980.

PART II

Item 5. Market for the Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

Market Information

Our Series A common stock has traded on the New York Stock Exchange under the symbol "CE" since January 21, 2005. The closing sale price of our Series A common stock, as reported by the New York Stock Exchange, on February 4, 2013 was \$46.53. The following table sets forth the high and low intraday sales prices per share of our Series A common stock, as reported by the New York Stock Exchange, and the dividends declared per share on our Series A common stock for the periods indicated.

	Price Range		Dividends Declared Per Share
	High	Low	
2012			
Quarter ended March 31, 2012	\$52.59	\$42.25	\$0.060
Quarter ended June 30, 2012	\$49.80	\$33.24	\$0.060
Quarter ended September 30, 2012	\$43.18	\$32.77	\$0.075
Quarter ended December 31, 2012	\$45.31	\$34.96	\$0.075
2011			
Quarter ended March 31, 2011	\$45.42	\$38.36	\$0.050
Quarter ended June 30, 2011	\$53.88	\$42.95	\$0.050
Quarter ended September 30, 2011	\$58.68	\$32.49	\$0.060
Quarter ended December 31, 2011	\$47.00	\$29.43	\$0.060

Holders

No shares of Celanese's Series B common stock and no shares of Celanese's 4.25% convertible perpetual preferred stock ("Preferred Stock") are issued and outstanding. As of February 4, 2013, there were 34 holders of record of our Series A common stock. By including persons holding shares in broker accounts under street names, however, we estimate we have approximately 55,594 beneficial holders.

Dividend Policy

Our Board of Directors has a policy of declaring, subject to legally available funds, a quarterly cash dividend on each share of our Series A common stock as determined in its sole discretion. Our Board of Directors may, at any time, modify or revoke our dividend policy on our Series A common stock.

On February 6, 2013, we declared a cash dividend of \$0.075 per share on our Series A common stock amounting to \$12 million. The cash dividend was for the period from November 1, 2012 to January 31, 2013 and will be paid on February 28, 2013 to holders of record as of February 19, 2013.

The amount available to us to pay cash dividends is restricted by our Senior Credit Agreement and the terms of our Notes. Any decision to declare and pay dividends in the future will be made at the discretion of our Board of Directors and will depend on, among other things, our results of operations, cash requirements, financial condition, contractual restrictions and other factors that our Board of Directors may deem relevant.

Celanese Purchases of its Equity Securities

The table below sets forth information regarding repurchases of our Series A common stock during the three months ended December 31, 2012:

Period	Total Number of Shares Purchased ⁽¹⁾	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Program	Approximate Dollar Value of Shares Remaining that may be Purchased Under the Program ⁽²⁾
October 1 - 31, 2012	260,208	\$37.76	84,236	\$397,000,000
November 1 - 30, 2012	64,672	\$39.35	63,396	\$394,000,000
December 1 - 31, 2012	73,384	\$43.04	58,699	\$392,000,000
Total	398,264		206,331	

Includes 175,972, 1,276, and 14,685 for October, November and December 2012, respectively, related to shares ⁽¹⁾ withheld from employees to cover their statutory minimum withholding requirements for personal income taxes related to the vesting of restricted stock units.

⁽²⁾Our Board of Directors authorized the repurchase of our Common Stock as follows:

	Authorized Amount (In \$ millions)
February 2008	400
October 2008	100
April 2011	129
October 2012	264
As of December 31, 2012	893

Performance Graph

The following Performance Graph and related information shall not be deemed "soliciting material" or to be "filed" with the Securities and Exchange Commission, nor shall such information be incorporated by reference into any future filing under the Securities Act of 1933 or Securities Exchange Act of 1934, each as amended, except to the extent that we specifically incorporate it by reference into such filing.

Comparison of Cumulative Total Return

Recent Sales of Unregistered Securities

Our deferred compensation plan offers certain of our senior employees and directors the opportunity to defer a portion of their compensation in exchange for a future payment amount equal to their deferrals plus or minus certain amounts based upon the market-performance of specified measurement funds selected by the participant. These deferred compensation obligations may be considered securities of Celanese. Participants were required to make deferral elections under the plan prior to January 1 of the year such deferrals will be withheld from their compensation. We relied on the exemption from registration provided by Section 4(2) of the Securities Act in making this offer to a select group of employees, fewer than 35 of which were non-accredited investors under the rules promulgated by the Securities and Exchange Commission.

Item 6. Selected Financial Data

The balance sheet data as of December 31, 2012 and 2011, and the statements of operations data for the years ended December 31, 2012, 2011 and 2010, all of which are set forth below, are derived from the consolidated financial statements included elsewhere in this Annual Report and should be read in conjunction with those financial statements and the notes thereto. The balance sheet data as of December 31, 2010, 2009 and 2008 and the statements of operations data for the years ended December 31, 2009 and 2008 shown below were derived from previously issued financial statements, adjusted for applicable discontinued operations.

	Year Ended December 31,				
	2012	2011	2010	2009	2008
	(In \$ millions, except per share data)

Amounts include accrued capital expenditures. Amounts do not include capital expenditures related to capital lease obligations or capital expenditures related to the relocation and expansion of our POM plant in Kelsterbach. See [Note 24 - Supplemental Cash Flow Information](#) and [Note 27 - Plant Relocation](#) in the accompanying consolidated financial statements.

Annual dividends for the year ended December 31, 2012 consist of two quarterly dividend payments of \$0.06 and two quarterly dividend payments of \$0.075 per share. In April 2012 the Board of Directors approved a 25% increase in our quarterly dividend rate from \$0.06 to \$0.075 per share of Series A common stock applicable to dividends payable beginning in August 2012. Annual dividends for the year ended December 31, 2011 consist of two quarterly dividend payments of \$0.05 and two quarterly dividend payments of \$0.06 per share. In April 2011 the Board of Directors approved a 20% increase in our quarterly dividend rate from \$0.05 to \$0.06 per share of Series A common stock applicable to dividends payable beginning in August 2011.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

In this Annual Report on Form 10-K ("Annual Report"), the term "Celanese" refers to Celanese Corporation, a Delaware corporation, and not its subsidiaries. The terms the "Company," "we," "our" and "us," refer to Celanese and its subsidiaries on a consolidated basis. The term "Celanese US" refers to the Company's subsidiary, Celanese US Holdings LLC, a Delaware limited liability company, and not its subsidiaries.

The following discussion should be read in conjunction with the accompanying consolidated financial statements and notes to the consolidated financial statements, which are prepared in accordance with accounting principles generally accepted in the United States of America ("US GAAP").

Investors are cautioned that the forward-looking statements contained in this section and other parts of this Annual Report involve both risk and uncertainty. Several important factors could cause actual results to differ materially from those anticipated by these statements. Many of these statements are macroeconomic in nature and are, therefore, beyond the control of management. See "Forward-Looking Statements" below.

Forward-Looking Statements

Management's Discussion and Analysis of Financial Condition and Results of Operations ("MD&A") and other parts of this Annual Report contain certain forward-looking statements and information relating to us that are based on the beliefs of our management as well as assumptions made by, and information currently available to, us. Generally, words such as "believe," "expect," "intend," "estimate," "anticipate," "project," "plan," "may," "can," "could," "might," and "will," and similar expressions, as they relate to us are intended to identify forward-looking statements. These statements reflect our current views with respect to future events, are not guarantees of future performance and involve risks and uncertainties that are difficult to predict. Further, certain forward-looking statements are based upon assumptions as to future events that may not prove to be accurate. See "Special Note Regarding Forward-Looking Statements" at the beginning of this Annual Report for further discussion.

Item 1A. Risk Factors of this Annual Report also contains a description of certain risk factors that you should consider which could significantly affect our financial results. In addition, the following factors could cause our actual results to differ materially from those results, performance or achievements that may be expressed or implied by such forward-looking statements. These factors include, among other things:

- changes in general economic, business, political and regulatory conditions in the countries or regions in which we operate;
- the length and depth of product and industry business cycles particularly in the automotive, electrical, textiles, electronics and construction industries;
- changes in the price and availability of raw materials, particularly changes in the demand for, supply of, and market prices of ethylene, methanol, natural gas, wood pulp and fuel oil and the prices for electricity and other energy sources;
- the ability to pass increases in raw material prices on to customers or otherwise improve margins through price increases;
- the ability to maintain plant utilization rates and to implement planned capacity additions and expansions;
- the ability to reduce or maintain at their current levels production costs and improve productivity by implementing technological improvements to existing plants;
- increased price competition and the introduction of competing products by other companies;
- changes in the degree of intellectual property and other legal protection afforded to our products or technologies, or the theft of such intellectual property;
- costs and potential disruption or interruption of production or operations due to accidents, cyber security incidents, terrorism or political unrest, or other unforeseen events or delays in construction of facilities;
- potential liability for remedial actions and increased costs under existing or future environmental regulations, including those relating to climate change;

potential liability resulting from pending or future litigation, or from changes in the laws, regulations or policies of governments or other governmental activities in the countries in which we operate;

changes in currency exchange rates and interest rates;

our level of indebtedness, which could diminish our ability to raise additional capital to fund operations or limit our ability to react to changes in the economy or the chemicals industry; and

various other factors, both referenced and not referenced in this Annual Report.

Many of these factors are macroeconomic in nature and are, therefore, beyond our control. Should one or more of these risks or uncertainties materialize, or should underlying assumptions prove incorrect, our actual results, performance or achievements may vary materially from those described in this Annual Report as anticipated, believed, estimated, expected, intended, planned or projected. We neither intend nor assume any obligation to update these forward-looking statements, which speak only as of their dates.

Overview

We are a global technology and specialty materials company. We are one of the world's largest producers of acetyl products, which are intermediate chemicals, for nearly all major industries, as well as a leading global producer of high performance engineered polymers that are used in a variety of high-value applications. As a recognized innovator in the chemicals industry, we engineer and manufacture a wide variety of products essential to everyday living. Our broad product portfolio serves a diverse set of end-use applications including paints and coatings, textiles, automotive applications, consumer and medical applications, performance industrial applications, filter media, paper and packaging, chemical additives, construction, consumer and industrial adhesives, and food and beverage applications. Our products enjoy leading global positions due to our large global production capacity, operating efficiencies, proprietary production technology and competitive cost structures.

Our large and diverse global customer base primarily consists of major companies in a broad array of industries. We hold geographically balanced global positions and participate in diversified end-use applications. We combine a demonstrated track record of execution, strong performance built on shared principles and objectives, and a clear focus on growth and value creation. Known for operational excellence and execution of our business strategies, we deliver value to customers around the globe with best-in-class technologies and solutions.

2012 Highlights

We completed an offering of \$500 million in aggregate principal amount of 4.625% senior unsecured notes due 2022. In connection with completion of the offering, we repaid \$400 million of our existing senior secured credit facility indebtedness that was set to mature in 2016 and used the remaining proceeds, together with cash on hand, to make a \$100 million contribution to our US pension plan.

We ceased manufacturing acetate tow and acetate flake at our Spondon, Derby, United Kingdom site.

We announced our new CelFX™ matrix technology for filter media. CelFX™ provides a flexible additive platform for innovation that allows our customers increased filter design flexibility, improved constituent reduction and supports a broad choice for enhancement additives.

We announced plans to construct and operate a methanol production facility at our Clear Lake, Texas acetyl complex which is expected to start up after July 1, 2015. As one of the world's largest producers of acetyl products, we plan to utilize our existing infrastructure to capture the opportunities created by abundant and affordable US natural gas supplies.

We announced that the Board of Directors increased our remaining share repurchase authorization as of September 30, 2012 to \$400 million.

We launched the new SunsationSM platform to help food and beverage manufacturers develop low- and no-calorie products that are better tasting and simplify the formulation process to bring products to market faster.

We entered into a joint statement of cooperation to advance the development of fuel ethanol projects with Pertamina, the state-owned energy company of Indonesia. In line with our long-term strategy to develop new and renewable energy capabilities, Pertamina will collaborate exclusively with us to jointly develop synthetic fuel ethanol projects in the Republic of Indonesia utilizing our proprietary TCX® ethanol process technology.

We started up our technology development unit for ethanol production at our facility in Clear Lake, Texas. The unit will support our continuing development of TCX[®] ethanol process technology for customers in both industrial-grade and fuel ethanol.

We completed the acquisition of certain assets from Ashland Inc., including two product lines, Vinac[®] and Flexbond[®], which will support the strategic growth of our Emulsions business.

We received key government approvals necessary to proceed with previously announced plans to modify and enhance our existing integrated acetyl facility at the Nanjing Chemical Industrial Park in China to produce ethanol for industrial uses. Based upon continued advancements to our TCX[®] ethanol process technology, we now expect to have approximately 30 to 40 percent additional ethanol production capacity above the originally announced 200,000 tons with no increase in the capital investment for the modification and enhancement. The unit is expected to startup in late 2013.

Moody's Investors Service and Standard & Poor's Ratings Services both upgraded its outlook for Celanese to "Positive" from "Stable." In raising our outlook, both agencies cited improved operating performance, debt reduction as well as our operational, geographical and product diversity.

We announced that our Board of Directors approved a 25% increase in our quarterly Series A Common Stock cash dividend. The Board of Directors increased the quarterly dividend rate from \$0.06 to \$0.075 per share of Common Stock on a quarterly basis and \$0.24 to \$0.30 per share of Common Stock on an annual basis. The new dividend rate began in August 2012.

2013 Outlook

We anticipate a challenging global economic environment will continue into 2013, particularly with the uncertainty in the European Union. We expect growth in China will improve throughout the year but remain modest compared to historic levels. As a result, a higher proportion of our earnings is expected to be generated in higher tax jurisdictions, but should not impact our earnings growth. We expect our earnings growth in 2013 to be consistent with our long-term growth objectives of 12% to 14% and to be driven by Celanese-specific initiatives. In addition to productivity initiatives, we will continue to focus on technology platforms that expand our addressable opportunities, invest in technology innovation that enhances our growth prospects and to increase the effectiveness and speed of new product introductions.

Consolidated Results – Year Ended December 31, 2012 Compared with Year Ended December 31, 2011

Net sales decreased \$345 million in 2012 from 2011 primarily due to lower pricing in our Acetyl Intermediates segment and unfavorable currency impacts across all our segments, except Consumer Specialties, due to the stronger US dollar against the Euro. Although Acetyl Intermediates volumes remained flat compared to the prior year, acetic acid pricing declined compared to 2011 as a result of the unfavorable economic conditions in Europe and Asia. Also in 2011, temporarily elevated industry utilization due to planned and unplanned outages of acetyl products resulted in higher industry pricing.

Operating profit decreased \$179 million from the prior year primarily due to lower pricing in our Acetyl Intermediates segment and unfavorable currency impacts. Lower other (charges) gains, net and selling, general and administrative expenses on a consolidated basis were not sufficient to offset the pricing and currency impacts. Operating profit as a percentage of sales in 2012 decreased to 8.0% from 10.2% in 2011.

Selling, general and administrative expenses decreased \$29 million in 2012 primarily due to a reduction in business and functional optimization initiatives and other productivity spending. As a percentage of sales, selling, general and administrative expenses remained unchanged at 7.9% for the years ended December 31, 2012 and 2011.

Other (charges) gains, net changed \$34 million during 2012 as compared to 2011 primarily due to lower expenses related to the relocation of our German polyacetal ("POM") operations to the Frankfurt Hoechst Industrial Park in Germany. During the year ended December 31, 2012 and 2011 we recorded \$7 million and \$47 million of relocation expenses, respectively. Additionally, we recorded \$8 million of employee termination benefits during the year ended December 31, 2011 related to the relocation of our German POM plant. No additional employee termination benefits were recorded in 2012. See [Note 27 - Plant Relocation](#) in the accompanying consolidated financial statements for further information regarding the POM plant relocation. The German POM operations are included in our Advanced Engineered Materials segment.

During the year ended December 31, 2011, we received consideration of \$17 million in connection with the settlement of a claim against a bankrupt supplier. The resolution of this commercial dispute is included in our Acetyl Intermediates segment.

Equity in net earnings of affiliates increased \$50 million in 2012 compared to the prior year primarily due to \$18 million in higher earnings in our Ibn Sina affiliate and \$13 million in our Polyplastics affiliate both included in our Advanced Engineered Materials segment. During the year ended December 31, 2012, a subsidiary of our Infrserv Hoechst affiliate restructured its debt resulting in additional net earnings of affiliates of \$22 million of which \$3 million was attributable to our Consumer Specialties segment, \$6 million to our Acetyl Intermediates segment and \$13 million to Other Activities.

Our effective income tax rate for the year ended December 31, 2012 was 7% compared to 20% for the year ended December 31, 2011. The effective tax rate for 2012 was favorably impacted by foreign tax credit carryforwards realized in the US during the three months ended March 31, 2012 and offset by deferred tax charges related to changes in assessment regarding the permanent reinvestment of certain foreign earnings.

Consolidated Results - Year Ended December 31, 2011 Compared with Year Ended December 31, 2010

Net sales increased \$845 million in 2011 from 2010 primarily due to higher pricing across all of our business segments. Favorable foreign currency impacts due to the weakening of the US dollar against the Euro also added to the increase in net sales. In addition to higher pricing, our Advanced Engineered Materials segment contributed to our increase in net sales reflecting the impact of the two product lines, Zenite[®] liquid crystal polymers ("LCP") and Thermx[®] polycyclohexylene-dimethylene terephthalate ("PCT"), acquired in May 2010, as well as higher volumes in almost all of its product lines, particularly in long-fiber reinforced thermoplastics ("LFT") and GUR[®] ultra-high molecular weight polyethylene. Increased net sales also were a result of strong global demand and higher innovation volumes from our Emulsions business. Volumes in our Consumer Specialties segment remained relatively flat while volumes in our Acetyl Intermediates segment decreased primarily due to planned and unplanned production outages at our Nanjing facility and industry destocking across the supply chain at the end of the year.

Operating profit increased \$187 million from the prior year due to higher net sales, primarily in our Acetyl Intermediates segment, which more than offset the increase in raw materials, other variable costs, and selling, general and administrative expenses. Operating profit also increased due to the absence of certain write-offs and accelerated amortization recorded in 2010. During the year ended December 31, 2010, we wrote-off other productive assets of \$18 million related to our Singapore and Nanjing, China facilities, which are included in our Acetyl Intermediates segment. We also recorded \$22 million of accelerated amortization to write-off the asset associated with a raw material purchase agreement with a supplier who filed for bankruptcy in 2009. The accelerated amortization was recorded as \$20 million to our Acetyl Intermediates segment and \$2 million to our Advanced Engineered Materials segment. Both the write-off of other productive assets and accelerated amortization were recorded to Cost of Sales in the accompanying consolidated statements of operations during the year ended December 31, 2010.

Selling, general and administrative expenses increased \$31 million in 2011 primarily due to costs associated with business and functional optimization initiatives and higher spending on innovation. However, as a percentage of sales, selling, general and administrative expenses declined from 8.5% to 7.9% for the year ended December 31, 2011 as compared to the same period in 2010 due to sustainable efficiencies.

Other (charges) gains, net changed \$2 million during 2011 as compared to 2010 primarily due to a decrease in asset impairments and employee termination benefits offset by an increase in plant relocation costs, a decrease in insurance recoveries and the absence of reductions in legal reserves.

During 2010, we concluded that certain long-lived assets were partially impaired at our acetate flake and tow manufacturing operations in Spondon, Derby, United Kingdom. Accordingly, we wrote down the related property, plant and equipment to its fair value of \$31 million, resulting in long-lived asset impairment losses of \$72 million. The Spondon, Derby, United Kingdom operations are included in our Consumer Specialties segment.

Employee termination benefits decreased \$10 million compared to prior year, primarily due to lower severance costs associated with the planned closure of our Spondon, Derby, United Kingdom facility and our "Project of Closure" at our Pardies, France operations, offset by additional severance costs related to our Kelsterbach plant relocation. The Pardies, France operations are included in our Acetyl Intermediates segment. See Note 4. Acquisitions - Dispositions, Ventures and Plant Closures in the accompanying consolidated financial statements for further information regarding these plant closures. We recorded \$8 million of employee termination benefits during the year ended December 31,

2011 related to the relocation of our POM Kelsterbach, Germany operations to the Frankfurt Hoechst Industrial Park, Germany. On September 26, 2011, we announced the start-up of the new POM production facility in the Frankfurt Hoechst Industrial Park.

During the year ended December 31, 2011, we received consideration of \$17 million in connection with the settlement of a claim against a bankrupt supplier. The resolution of this commercial dispute is included in the Acetyl Intermediates segment.

Other (charges) gains, net for the year ended December 31, 2011 and 2010 was partially offset by \$6 million and \$59 million, respectively, of recoveries and decreases in legal reserves associated with plumbing actions which are included in our Advanced Engineered Materials segment.

As a result of certain events beginning in October 2008 and subsequent periodic cessation of production during 2009, we recorded \$25 million of insurance recoveries during the year ended December 31, 2010 in our Industrial Specialties segment. This amount was partially offset by a \$7 million charge from our captive insurance companies included in Other Activities.

Equity in net earnings of affiliates increased during 2011 primarily due to higher earnings in our Ibn Sina affiliate included in our Advanced Engineered Materials segment.

Our effective income tax rate for the year ended December 31, 2011 was 20% compared to 21% for the year ended December 31, 2010. The effective tax rate for 2011 was favorably impacted by increased foreign tax credit benefits realized in the United States and changes in assessments regarding valuation allowances on certain deferred tax assets, partially offset by foreign losses not providing tax benefits. The effective rate for 2010 was favorably impacted by amendments to tax legislation in Mexico.

Business Segments – Year Ended December 31, 2012 Compared with Year Ended December 31, 2011

Advanced Engineered Materials

	Year Ended December 31,		
	2012	2011	Change
	(In \$ millions, except percentages)		
Net sales	1,261	1,298	(37)
Net sales variance			
Volume	(2)	%	
Price	2	%	
Currency	(3)	%	
Other	—	%	
Other (charges) gains, net	(2)	(49)	47
Operating profit (loss)	86	76	10
Operating margin	6.8	% 5.9	%
Equity in net earnings (loss) of affiliates	190	161	29
Earnings (loss) from continuing operations before tax	276	239	37
Depreciation and amortization	113	100	13

Our Advanced Engineered Materials segment develops, produces and supplies a broad portfolio of high performance specialty polymers for application in automotive, medical and electronics products, as well as other consumer and industrial applications. Together with our strategic affiliates, our Advanced Engineered Materials segment is a leading participant in the global specialty polymers industry. The primary products of Advanced Engineered Materials are polyoxymethylene, also commonly known as polyacetal ("POM"), LFT, polybutylene terephthalate ("PBT"), GUR[®] ultra-high molecular weight polyethylene and LCP. POM, LFT and PBT are used in a broad range of products including automotive components, medical devices, electronics, appliances and industrial applications. GUR[®] ultra-high molecular weight polyethylene is used in battery separators, conveyor belts, filtration equipment, coatings and medical devices. Primary end uses for LCP are electrical and electronics applications or products. Polyphenylene sulfide ("PPS"), sold under the Fortron[®] brand, is a key product of Fortron Industries LLC, one of our strategic affiliates. PPS is used in a wide variety of automotive and other applications, especially those requiring heat and/or chemical resistance.

Advanced Engineered Materials' net sales decreased \$37 million for the year ended December 31, 2012 compared to the same period in 2011. The decrease in net sales was primarily due to the weak economic conditions in Europe,

particularly impacting demand for automotive and industrial applications in this region, partially offset by increased volumes in automotive

42

applications in the Americas. The weak Euro had an unfavorable currency impact on net sales. 2% higher average pricing across most product lines partially offset the lower volumes and unfavorable currency impacts.

Operating profit increased \$10 million for the year ended December 31, 2012 as compared to the same period in 2011 primarily due to a change in other (charges) gains, net of \$47 million primarily associated with the relocation and expansion of our Kelsterbach, Germany POM production operations which more than offset the higher depreciation of \$13 million mainly related to the new POM production facility in Frankfurt Hoechst Industrial Park. Increased pricing resulted in expanded margins which partially offset lower volumes, unfavorable currency impacts and higher expenses of \$28 million, primarily related to plant maintenance, integrating manufacturing operations from recently acquired product lines and investing in our compounding operations in Asia.

For the year ended December 31, 2012, equity in net earnings (loss) of affiliates increased \$29 million primarily due to an \$18 million increase in earnings in our Ibn Sina affiliate, which provides an economic hedge against raw material costs used in our specialty polymer operations. The increase in Ibn Sina earnings was primarily driven by higher pricing of methanol and methyl tertiary-butyl ether. Operating and financial results of our Polyplastics affiliate for the year ended December 31, 2011 were modestly impacted by the March 2011 natural disasters in Japan and a plant turnaround during the three months ended December 31, 2011. No such events occurred in 2012 with earnings in our Polyplastics affiliate up \$13 million over 2011.

Consumer Specialties

	Year Ended December 31,		
	2012	2011	Change
	(In \$ millions, except percentages)		
Net sales	1,186	1,161	25
Net sales variance			
Volume	(4)	%	
Price	6	%	
Currency	—	%	
Other	—	%	
Other (charges) gains, net	(4) (3) (1
Operating profit (loss)	244	227	17
Operating margin	20.6	% 19.6	%
Equity in net earnings (loss) of affiliates	6	2	4
Dividend income - cost investments	83	78	5
Earnings (loss) from continuing operations before tax	334	307	27
Depreciation and amortization	45	44	1

Our Consumer Specialties segment includes our Acetate Products and Nutrinova businesses, which serve consumer-driven applications. Our Acetate Products business is a leading producer and supplier of acetate flake, acetate film and acetate tow, primarily used in filter products applications. Our Nutrinova business is a leading international supplier of premium quality ingredients for the food, beverage and pharmaceuticals industries. Nutrinova produces and sells Sunett®, high intensity sweeteners, and is one of the world's largest producers of food protection ingredients, such as potassium sorbates and sorbic acid.

Net sales for Consumer Specialties increased \$25 million for the year ended December 31, 2012 as compared to the same period in 2011 due to 6% higher Acetate Products pricing which more than offset the decline in volumes.

Volumes declined for Acetate Products primarily due to actions taken to accommodate the November 2012 shutdown of our acetate tow and flake manufacturing operations at our Spondon, Derby, United Kingdom site. Nutrinova net sales remained flat over prior year.

Operating profit increased \$17 million for the year ended December 31, 2012 as compared with the same period in 2011 as higher pricing more than offset lower volumes and \$24 million in higher plant maintenance and energy costs. Plant maintenance costs included \$10 million of increased spending related to a temporary production outage during the three months ended March 31, 2012.

Other (charges) gains, net changed \$1 million for the year ended December 31, 2012 primarily due to recording insurance recoveries of \$9 million related to an electrical disruption in 2010 at our Acetate Products manufacturing facility in Narrows,

43

Virginia offset by \$8 million of long-lived asset impairment losses related to the previously announced closure of our Spondon, Derby, United Kingdom facility. The insurance recoveries were offset in our captive insurance companies included in Other Activities.

Industrial Specialties

	Year Ended December 31,		
	2012	2011	Change
	(In \$ millions, except percentages)		
Net sales	1,184	1,223	(39)
Net sales variance			
Volume	3	%	
Price	(3)	%	
Currency	(3)	%	
Other	—	%	
Other (charges) gains, net	—	—	—
Operating profit (loss)	82	100	(18)
Operating margin	6.9	% 8.2	%
Earnings (loss) from continuing operations before tax	82	102	(20)
Depreciation and amortization	55	45	10

Our Industrial Specialties segment includes our Emulsions and EVA Performance Polymers businesses. Our Emulsions business is a leading global producer of vinyl acetate-based emulsions and develops products and application technologies to improve performance, create value and drive innovation in applications such as paints and coatings, adhesives, construction, glass fiber, textiles and paper. Our emulsions products are sold under globally and regionally recognized brands including EcoVAE[®], Mowilith[®], Vinamul[®], Celvolit[®], BriteCoat[®], TufCOR[™], and Avicor[™]. EVA Performance Polymers is a leading North American manufacturer of a full range of low-density polyethylene and specialty ethylene vinyl acetate ("EVA") resins and compounds. Sold under the Ateva[®] and VitalDose[®] brands, these products are used in many applications, including flexible packaging films, lamination film products, hot melt adhesives, medical products, automotive, carpeting and photovoltaic cells.

Net sales decreased in Industrial Specialties \$39 million for the year ended December 31, 2012 compared to the same period in 2011. Volumes increased, reflecting the increased demand in North America and Asia for our Emulsions applications, but were not sufficient to offset the impacts of lower pricing and unfavorable currency, mostly due to the stronger dollar against the Euro. Lower pricing was primarily driven by lower raw material costs, a shift in product mix in our Emulsions business and a soft global demand for photovoltaic applications.

Operating profit decreased \$18 million for the year ended December 31, 2012 compared to the same period in 2011. The decrease in operating profit is attributed to the 3% lower average pricing, partially offset by higher volumes as well as lower raw material costs of \$34 million, primarily related to ethylene and vinyl acetate monomer ("VAM"). Depreciation and amortization increased \$10 million compared to prior year, primarily due to increased amortization in our Emulsions business related to the recent acquisition of finite-lived intangible assets and increased depreciation related to the China vinyl acetate ethylene emulsions ("VAE") capacity expansion.

Acetyl Intermediates

	Year Ended December 31,		
	2012	2011	Change
	(In \$ millions, except percentages)		
Net sales	3,231	3,551	(320)
Net sales variance			
Volume	—	%	
Price	(7)	%	
Currency	(2)	%	
Other	—	%	
Other (charges) gains, net	—	14	(14)
Operating profit (loss)	263	459	(196)
Operating margin	8.1	% 12.9	%
Equity in net earnings (loss) of affiliates	11	5	6
Earnings (loss) from continuing operations before tax	276	469	(193)
Depreciation and amortization	80	96	(16)

Our Acetyl Intermediates segment produces and supplies acetyl products, including acetic acid, VAM, acetic anhydride and acetate esters. These products are generally used as starting materials for colorants, paints, adhesives, coatings and medicines. This business segment also produces organic solvents and intermediates for pharmaceutical, agricultural and chemical products.

Net sales decreased \$320 million for the year ended December 31, 2012 compared to the same period in 2011 due to lower pricing and unfavorable foreign currency impacts primarily driven by the weakening of the Euro against the US dollar. Volumes overall remained flat, with higher downstream product volumes, primarily VAM and acetic anhydride, offsetting the decline in acetic acid volumes. Acetic acid pricing and demand declined during the year ended December 31, 2012 as a result of the unfavorable economic conditions in Europe and Asia. Also in 2011, temporarily elevated industry utilization due to planned and unplanned outages of acetyl products resulted in higher industry pricing.

Operating profit decreased \$196 million for the year ended December 31, 2012 compared to the same period in 2011 primarily due to the 7% decrease in sales prices and 2% impact of unfavorable foreign currency on sales. The decrease in operating profit was partially offset by lower raw materials costs of \$69 million and lower plant maintenance of \$20 million. Other (charges) gains, net changed \$14 million for the year ended December 31, 2012. During the year ended December 31, 2011 we received consideration of \$17 million in connection with the settlement of a claim against a bankrupt supplier. No such settlement was received in 2012. Depreciation and amortization decreased \$16 million primarily due to certain customer-related intangible assets being fully amortized in 2011.

Other Activities

Other Activities primarily consists of corporate center costs, including financing and administrative activities, and our captive insurance companies.

The operating loss of \$164 million for Other Activities decreased \$8 million for the year ended December 31, 2012 compared to the same period in 2011 primarily due to a decrease in selling, general and administrative expenses. Selling, general and administrative expenses decreased \$18 million primarily due to a reduction in business and functional optimization initiatives, stock-based compensation costs and other productivity spending. The decrease in these costs were partially offset by captive insurance recoveries paid of \$9 million during the year ended December 31, 2012 related to an electrical disruption in 2010 at our Acetate Products manufacturing facility in Narrows, Virginia.

Business Segment - Year Ended December 31, 2011 Compared with Year Ended December 31, 2010
Advanced Engineered Materials

	Year Ended December 31,		Change
	2011	2010	
	(In \$ millions, except percentages)		
Net sales	1,298	1,109	189
Net sales variance			
Volume	2	%	
Price	8	%	
Currency	3	%	
Other	4	%	
Other (charges) gains, net	(49) 31	(80)
Operating profit (loss)	76	186	(110)
Operating margin	5.9	% 16.8	%
Equity in net earnings (loss) of affiliates	161	144	17
Earnings (loss) from continuing operations before tax	239	329	(90)
Depreciation and amortization	100	76	24

Advanced Engineered Materials' net sales increased \$189 million for the year ended December 31, 2011 compared to the same period in 2010. The increase in net sales is primarily due to increases in value-in use pricing for all products, a 4% impact due to two product lines, Zenite[®] LCP and Thermx[®] PCT, acquired from DuPont Performance Polymers in May 2010, favorable currency impacts, driven by the weakening of the US dollar against the Euro, as well as higher volumes in almost all product lines, particularly in LFT and GUR[®] ultra-high molecular weight polyethylene, reflecting an increase in automotive demand with auto builds up 9% in North America over the prior year*.

Operating profit decreased \$110 million for the year ended December 31, 2011 as compared to the same period in 2010 mainly due to an \$80 million change in other (charges) gains, net. Other (charges) gains, net were higher than in the prior year reflecting \$21 million in higher costs incurred in 2011 associated with the relocation of our POM production facility to Frankfurt Hoechst Industrial Park and \$53 million related to a lower amount of recoveries and legal reserve reductions associated with plumbing actions. In addition, the improved margins from volume and price were more than offset by higher depreciation related to the new POM production facility in Frankfurt of \$20 million, and higher raw material costs, primarily ethylene and polypropylene, of \$52 million.

For the year ended December 31, 2011, an increase in equity in net earnings (loss) of affiliates partially offset the decrease in earnings (loss) from continuing operations before tax. The increase in net earnings (loss) of affiliates was primarily driven by \$31 million of higher earnings in our Ibn Sina affiliate, which provides an economic hedge against raw material costs used in our POM operations.

Operating and financial results of our Polyplastics strategic affiliate were modestly impacted by the March 2011 natural disasters in Japan and a plant turnaround during the year ended December 31, 2011.

Consumer Specialties

	Year Ended December 31,		
	2011	2010	Change
	(In \$ millions, except percentages)		
Net sales	1,161	1,098	63
Net sales variance			
Volume	1	%	
Price	5	%	
Currency	—	%	
Other	—	%	
Other (charges) gains, net	(3) (76) 73
Operating profit (loss)	227	164	63
Operating margin	19.6	% 14.9	%
Equity in net earnings (loss) of affiliates	2	2	—
Dividend income - cost investments	78	71	7
Earnings (loss) from continuing operations before tax	307	237	70
Depreciation and amortization	44	42	2

Net sales for Consumer Specialties increased \$63 million for the year ended December 31, 2011 as compared to the same period in 2010. Acetate Products pricing increased 6% while volumes stayed relatively flat year over year, reflecting strong global demand for our products which offset the impact on volumes during the three months ended September 30, 2011 when the business incurred a temporary manufacturing outage. Nutrinova's volumes increased slightly reflecting higher demand and new applications for Sunett®, offsetting its slight decrease in pricing.

Operating profit increased \$63 million for the year ended December 31, 2011 as compared with the same period in 2010 primarily due to a change in other (charges) gains, net with the absence of the long-lived asset impairment losses of \$72 million incurred in 2010 associated with management's assessment of the closure of our acetate flake and tow production operations in Spondon, Derby, United Kingdom. Higher raw material costs, primarily due to wood pulp prices and increased spending on planned maintenance and reliability efforts of \$43 million and \$27 million, respectively, were partially offset by higher pricing.

Industrial Specialties

	Year Ended December 31,		
	2011	2010	Change
	(In \$ millions, except percentages)		
Net sales	1,223	1,036	187
Net sales variance			
Volume	2	%	
Price	13	%	
Currency	3	%	
Other	—	%	
Other (charges) gains, net	—	25	(25
Operating profit (loss)	100	89	11
Operating margin	8.2	% 8.6	%
Earnings (loss) from continuing operations before tax	102	89	13
Depreciation and amortization	45	41	4

Net sales increased in our Industrial Specialties segment \$187 million for the year ended December 31, 2011 compared to the same period in 2010. Increased net sales in our Emulsions business were a result of geographic growth primarily in China, reflecting the growth in Asia's construction industry and an increase in our capacity. Strong global demand, particularly in North America, for innovative applications and adhesive applications from our Emulsions business also contributed to our

increase in net sales. In addition net sales were impacted by a favorable currency due to the weaker dollar against the Euro and higher pricing in both our Emulsions and our EVA Performance Polymers businesses.

Operating profit increased \$11 million for the year ended December 31, 2011 compared to the same period in 2010. The increase in operating profit is attributed to the increase in volumes and pricing offset by higher raw material costs of \$79 million, primarily ethylene, VAM and acrylates, higher depreciation with the completion of our China facility expansion, as well as the \$25 million impact of an insurance recovery in 2010 related to events of force majeure at our EVA Performance Polymers facility in Edmonton, Alberta, Canada in 2008 and 2009, which is recorded as a component of other (charges) gains, net.

Acetyl Intermediates

	Year Ended December 31,		
	2011	2010	Change
	(In \$ millions, except percentages)		
Net sales	3,551	3,082	469
Net sales variance			
Volume	(4)	%	
Price	16	%	
Currency	3	%	
Other	—	%	
Other (charges) gains, net	14	(12) 26
Operating profit (loss)	459	243	216
Operating margin	12.9	% 7.9	%
Equity in net earnings (loss) of affiliates	5	5	—
Earnings (loss) from continuing operations before tax	469	252	217
Depreciation and amortization	96	117	(21

Net sales increased \$469 million for the year ended December 31, 2011 compared to the same period in 2010 due to higher pricing and favorable foreign currency impacts driven by the weakening of the US dollar against the Euro and Chinese renminbi offset partially by lower volumes. Volumes decreased primarily due to planned and unplanned outages at our Nanjing facility, which had a negative 1% impact on volume year over year, and industry destocking across the supply chain at the end of the year. The rapid destocking across the acetyl chain during the three months ended December 31, 2011 was a result of lower end-use demand in Europe due to European economic uncertainty which temporarily lowered volumes 1% compared to prior year. Favorable pricing for all major acetyl derivative product lines was achieved across all regions, reflecting the recovery of higher raw material costs for ethylene, methanol and carbon monoxide and a tight supply.

Operating profit increased \$216 million for the year ended December 31, 2011 compared to the same period in 2010. The increase in operating profit is primarily due to the increase in sales prices and impact of favorable foreign currency on sales which more than offset the decline in volumes and the impact of higher raw material, energy and other variable costs of 14%. During the year ended December 31, 2011, we also received consideration of \$17 million in connection with the settlement of a claim against a bankrupt supplier which was recorded to other (charges) gains, net. Depreciation and amortization for the year ended December 31, 2011 was less than in the prior year. In 2010, \$20 million of accelerated amortization was recorded to write-off the asset associated with a raw material purchase agreement with the bankrupt supplier. The increase in operating profit also reflects the reduction in exit costs related to our acetic acid and VAM production operations in Pardies, France of \$8 million.

Other Activities

Other Activities primarily consists of corporate center costs, including financing and administrative activities, and our captive insurance companies.

The operating loss for Other Activities decreased \$7 million for the year ended December 31, 2011 compared to the same period in 2010 primarily due to lower selling, general and administrative expenses and other (charges) gains, net. Selling, general and administrative expenses decreased \$13 million primarily due to lower shared services costs,

stock-based compensation costs and lower legal claims, slightly offset by strategic growth initiatives. Other (charges) gains, net changed \$4

48

million due to the resolution of a commercial dispute and the absence of insurance recovery payments. Offsetting these lower costs was the absence of the \$14 million gain on the sale of an office building in 2010.

Liquidity and Capital Resources

Our primary source of liquidity is cash generated from operations, available cash and cash equivalents and dividends from our portfolio of strategic investments. In addition, as of December 31, 2012 we have \$108 million available for borrowing under our credit-linked revolving facility and \$600 million available under our revolving credit facility to assist in meeting our working capital needs and other contractual obligations, if required.

While our contractual obligations, commitments and debt service requirements over the next several years are significant, we continue to believe we will have available resources to meet our liquidity requirements, including debt service, in 2013. If our cash flow from operations is insufficient to fund our debt service and other obligations, we may be required to use other means available to us such as increasing our borrowings, reducing or delaying capital expenditures, seeking additional capital or seeking to restructure or refinance our indebtedness. There can be no assurance, however, that we will continue to generate cash flows at or above current levels.

As a result of the National Emission Standard for Hazardous Air Pollutants for Industrial, Commercial, and Institutional Boilers and Process Heaters ("Boiler MACT") regulations discussed in Item 1A. Risk Factors, we will be required to make significant capital expenditures to comply with stricter emissions requirements for industrial boilers and process heaters at our facilities in the next three to four years. In October 2012, we received approval to proceed with replacing the coal-fired boilers at our Narrows, Virginia site with new, natural gas-fired boilers. Our total investment is estimated at over \$150 million. Upon approval of construction permits, we anticipate construction will begin in early 2013 with completion approximately 2 years later.

In June 2012, we announced our intent to build a new 1.3 million ton per year methanol plant in Clear Lake, Texas. The unit is expected to start up in mid-July 2015. We are currently evaluating various strategic alternatives that would allow us to share the off-take and minimize our portion of the capital expenditures of this planned facility.

In June 2011, we announced our plans to modify and enhance our existing integrated acetyl facility at the Nanjing Chemical Industrial Park with our TCX[®] advanced technology. In March 2012, we received key government approvals necessary to proceed with our plans to modify and enhance our Nanjing facility. The unit is expected to startup in late 2013 with a capacity of approximately 275,000 tons per year. We also intend to construct one, and possibly two, additional industrial ethanol complexes in China, following necessary approvals, utilizing Celanese TCX[®] ethanol process technology to help supply applications for the growing Asia region.

In April 2010, we announced that, through our strategic affiliate Ibn Sina, we will construct a 50,000 ton POM production facility in Saudi Arabia. Our pro rata share of invested capital in the POM expansion is expected to total approximately \$165 million over a five year period which began in late 2010.

Total cash outflows for capital expenditures, including the specific projects above, are expected to be in the range of \$375 million to \$400 million in 2013.

On a stand-alone basis, Celanese and its immediate 100% owned subsidiary, Celanese US Holdings LLC ("Celanese US"), have no material assets other than the stock of their subsidiaries and no independent external operations of their own. Accordingly, they generally depend on the cash flow of their subsidiaries and their ability to pay dividends and make other distributions to Celanese and Celanese US in order to meet their obligations, including their obligations under senior credit facilities and senior notes and to pay dividends on Celanese Series A common stock.

Cash Flows

Cash and cash equivalents as of December 31, 2012 were \$959 million, which is an increase of \$277 million from December 31, 2011. As of December 31, 2012, \$674 million of the \$959 million of cash and cash equivalents was held by our foreign subsidiaries. If these funds are needed for our operations in the US, we may be required to accrue and pay US taxes to repatriate these funds. Our intent is to permanently reinvest these funds outside of the US, with the possible exception of funds that have been previously subject to US federal and state taxation. Our current plans do not demonstrate a need to repatriate cash held by our foreign subsidiaries in a taxable transaction to fund our US operations. Cash and cash equivalents as of December 31, 2011 were \$682 million, which was a decrease of \$58

million from December 31, 2010.

49

Net Cash Provided by Operating Activities

Cash flow provided by operating activities increased by \$84 million for the year ended December 31, 2012 as compared to the same period in 2011. The increase in cash provided by operations was positively impacted by the decrease in trade working capital, which was primarily due to the decrease in trade receivables. Trade receivables decreased primarily due to lower net sales during the three months ended December 31, 2012. The increase in cash provided by operations was also impacted by lower cash taxes paid of \$30 million, lower cash interest paid of \$34 million, offset by higher pension plan and other postretirement benefit plan contributions of \$81 million made during the year ended December 31, 2012 as compared to the prior year.

Cash flow provided by operating activities increased by \$186 million for the year ended December 31, 2011 as compared to the same period in 2010. Cash flow provided by operations was positively impacted by the increase in earnings from continuing operations as well as lower cash taxes. The increase in cash provided by operations was partially offset by the impact of increases in trade working capital, which was primarily impacted by the increase in trade receivables and inventories. Trade receivables increased primarily due to increases in net sales resulting from higher average selling prices. Inventories increased primarily due to anticipated business growth in 2012, higher raw material prices and in preparation for site optimization. The increase in cash provided by operations was also offset by higher pension plan and other postretirement benefit plan contributions of \$127 million made during the year ended December 31, 2011 as compared to the prior year.

Trade working capital is calculated as follows:

	As of December 31,		
	2012	2011	2010
	(In \$ millions)		
Trade receivables, net	827	871	827
Inventories	711	712	610
Trade payables - third party and affiliates	(649)	(673)	(673)
Trade working capital	889	910	764

Net Cash Provided by (Used in) Investing Activities

Net cash used in investing activities was \$500 million and \$441 million for the years ended December 31, 2012 and 2011, respectively. Cash outflows were primarily for capital expenditures of \$361 million and \$349 million for the years ended December 31, 2012 and 2011, respectively, excluding amounts related to the relocation and expansion of our German POM operations. Capital expenditures for our Kelsterbach POM plant relocation and expansion were \$49 million and \$204 million for the years ended December 31, 2012 and 2011, respectively. In addition, during the year ended December 31, 2011, we received proceeds of \$158 million from the Frankfurt, Germany Airport related to the relocation of our German POM operations. No such proceeds were received during the year ended December 31, 2012.

Net cash used for acquisitions increased by \$15 million during the year ended December 31, 2012. In 2012 we acquired two emulsions product lines, Vinac[®] and Flexbond[®], for \$23 million while in 2011 we spent \$8 million on the acquisition of emulsions process technology.

Net cash used in investing activities decreased \$119 million for the year ended December 31, 2011 as compared to the same period in 2010. During the year ended December 31, 2011, we received \$158 million from the Frankfurt, Germany Airport related to the relocation of our Kelsterbach, Germany Ticona operations. No such proceeds were received during the same period in 2010. In addition, in 2011 capital expenditures related to the relocation and expansion of our German POM operations were \$108 million lower than in 2010. In 2011 we acquired a business primarily consisting of emulsions process technology for \$8 million while in 2010 we incurred \$46 million related to our acquisition of two complimentary product lines by our Advanced Engineered Materials segment, Zenite[®] LCP and Thermx[®] PCT. These decreases in cash used in investing activities was partially offset by an increase in capital expenditures from \$349 million for the year ended December 31, 2011 as compared to \$201 million in 2010.

Net Cash Provided by (Used in) Financing Activities

Net cash provided by (used in) financing activities changed \$302 million from a cash outflow of \$253 million for the year ended December 31, 2011 to a cash inflow of \$49 million for the year ended December 31, 2012. The increase in net cash provided by financing activities was primarily due to net borrowings of \$63 million in 2012 compared to net repayments of

50

\$196 million in 2011. Net cash provided by financing activities also benefited from higher stock option exercises in 2012 of \$62 million compared to \$20 million of stock option exercises in 2011. On November 13, 2012, Celanese US completed an offering of \$500 million in aggregate principal amount of 4.625% senior unsecured notes due 2022 (the "4.625% Notes"). We used part of the proceeds from the 4.625% Notes to prepay \$400 million of our outstanding Term C loan facility. The remaining proceeds, together with cash on hand, were used to make a \$100 million contribution to our US pension plan.

Net cash provided by (used in) financing activities changed \$135 million from a cash outflow of \$388 million for the year ended December 31, 2010 to a cash outflow of \$253 million for the year ended December 31, 2011. The decrease in cash used in financing activities was primarily related to lower net borrowings and fewer stock repurchase transactions when compared to the same period in 2010. In May 2011, we completed an offering of \$400 million of 5.875% senior unsecured notes due 2021 (the "5.875% Notes"). We used the proceeds from the issuance of the 5.875% Notes and cash on hand to prepay the outstanding balance of \$516 million on our Term B loan facility.

In addition, exchange rate effects on cash and cash equivalents were a favorable currency impact of \$6 million in 2012 compared to unfavorable impacts of \$2 million and \$18 million for the years ended December 31, 2011 and 2010, respectively.

Debt and Other Obligations

Senior Notes

On November 13, 2012, Celanese US completed an offering of \$500 million in aggregate principal amount of 4.625% senior unsecured notes due 2022 (the "4.625% Notes") in a public offering registered under the Securities Act of 1933, as amended (the "Securities Act"). The 4.625% Notes are guaranteed on a senior unsecured basis by Celanese and each of the domestic subsidiaries of Celanese US that guarantee its obligations under its senior secured credit facilities (the "Subsidiary Guarantors").

The 4.625% Notes were issued under an indenture dated May 6, 2011, as amended by a second supplemental indenture, dated November 13, 2012 (the "Second Supplemental Indenture") among Celanese US, Celanese, the Subsidiary Guarantors and Wells Fargo Bank, National Association, as trustee. Celanese US will pay interest on the 4.625% Notes on March 15 and September 15 of each year commencing on March 15, 2013. Prior to November 15, 2022, Celanese US may redeem some or all of the 4.625% Notes at a redemption price of 100% of the principal amount, plus a "make-whole" premium as specified in the Second Supplemental Indenture, plus accrued and unpaid interest, if any, to the redemption date. The 4.625% Notes are senior unsecured obligations of Celanese US and rank equally in right of payment with all other unsubordinated indebtedness of Celanese US.

In May 2011, Celanese US completed an offering of \$400 million in aggregate principal amount of 5.875% senior unsecured notes due 2021 (the "5.875% Notes") in a public offering registered under the Securities Act. The 5.875% Notes are guaranteed on a senior unsecured basis by Celanese and the Subsidiary Guarantors.

The 5.875% Notes were issued under an indenture and a first supplemental indenture, each dated May 6, 2011 (the "First Supplemental Indenture") among Celanese US, Celanese, the Subsidiary Guarantors and Wells Fargo Bank, National Association, as trustee. Celanese US pays interest on the 5.875% Notes on June 15 and December 15 of each year commencing on December 15, 2011. Prior to June 15, 2021, Celanese US may redeem some or all of the 5.875% Notes at a redemption price of 100% of the principal amount, plus a "make-whole" premium as specified in the First Supplemental Indenture, plus accrued and unpaid interest, if any, to the redemption date. The 5.875% Notes are senior unsecured obligations of Celanese US and rank equally in right of payment with all other unsubordinated indebtedness of Celanese US.

In September 2010, Celanese US completed the private placement of \$600 million in aggregate principal amount of 6.625% senior unsecured notes due 2018 (the "6.625% Notes") under an indenture dated September 24, 2010 (the "Indenture") among Celanese US, Celanese, the Subsidiary Guarantors and Wells Fargo Bank, National Association, as trustee. In April 2011, Celanese US registered the 6.625% Notes under the Securities Act. Celanese US pays interest on the 6.625% Notes on April 15 and October 15 of each year commencing on April 15, 2011. The 6.625%

Notes are redeemable, in whole or in part, at any time on or after October 15, 2014 at the redemption prices specified in the Indenture. Prior to October 15, 2014, Celanese US may redeem some or all of the 6.625% Notes at a redemption price of 100% of the principal amount, plus a "make-whole" premium as specified in the Indenture, plus accrued and unpaid interest, if any, to the redemption date. The 6.625% Notes are senior unsecured obligations of Celanese US and rank equally in right of payment with all other unsubordinated indebtedness of Celanese US. The 6.625% Notes are guaranteed on a senior unsecured basis by Celanese and the Subsidiary Guarantors.

The Indenture and the First and Second Supplemental Indentures contain covenants, including, but not limited to, restrictions on our ability to incur indebtedness; grant liens on assets; merge, consolidate, or sell assets; pay dividends or make other restricted payments; engage in transactions with affiliates; or engage in other businesses.

Senior Credit Facilities

In September 2010, we entered into an amendment agreement with the lenders under our existing senior secured credit facilities in order to amend and restate the corresponding credit agreement, dated as of April 2, 2007 (as previously amended, the "Existing Credit Agreement", and as amended and restated by the amendment agreement, the "Amended Credit Agreement"). Our Amended Credit Agreement consists of the Term C loan facility due 2016, the Term B loan facility due 2014, a \$600 million revolving credit facility terminating in 2015 and a \$228 million credit-linked revolving facility terminating in 2014.

In May 2011, Celanese US, through its subsidiaries, prepaid the outstanding Term B loan facility under the Amended Credit Agreement set to mature in 2014 in an aggregate principal amount of \$516 million using proceeds from the 5.875% Notes and cash on hand.

On November 13, 2012, Celanese US prepaid \$400 million of its outstanding Term C loan facility under the Amended Credit Agreement set to mature in 2016 using proceeds from the 4.625% Notes.

As a result of the Term C loan paydown using proceeds from the issuance of the 4.625% Notes, \$3 million has been recorded as Refinancing expense in the accompanying consolidated statements of operations which includes accelerated amortization of deferred financing costs and other refinancing expenses. In addition, we recorded deferred financing costs of \$8 million which are being amortized over the term of the 4.625% Notes. These deferred financing costs combined with existing deferred financing costs of \$22 million are included in noncurrent Other assets on the consolidated balance sheet as of December 31, 2012.

The balances available for borrowing under the revolving credit facility and the credit-linked revolving facility are as follows:

	As of December 31, 2012 (In \$ millions)
Revolving Credit Facility	
Borrowings outstanding	—
Letters of credit issued	—
Available for borrowing	600
Credit-Linked Revolving Facility	
Borrowings outstanding	50
Letters of credit issued	70
Available for borrowing	108

As a condition to borrowing funds or requesting that letters of credit be issued under the revolving credit facility, our first lien senior secured leverage ratio (as calculated as of the last day of the most recent fiscal quarter for which financial statements have been delivered under the revolving facility) cannot exceed the threshold as specified below. Further, our first lien senior secured leverage ratio must be maintained at or below that threshold while any amounts are outstanding under the revolving credit facility.

Our amended first lien senior secured leverage ratios and the borrowing capacity under the revolving credit facility are as follows:

	As of December 31, 2012			Borrowing Capacity (In \$ millions)
	Maximum	Estimate	Estimate, If Fully Drawn	
First Lien Senior Secured Leverage Ratios	3.90	0.88	1.37	600

The Amended Credit Agreement contains covenants including, but not limited to, restrictions on our ability to incur indebtedness; grant liens on assets; merge, consolidate, or sell assets; pay dividends or make other restricted

payments; make investments; prepay or modify certain indebtedness; engage in transactions with affiliates; enter into sale-leaseback transactions

52

or hedge transactions; or engage in other businesses; as well as a covenant requiring maintenance of a maximum first lien senior secured leverage ratio.

We are in compliance with all of the covenants related to our debt agreements as of December 31, 2012.

Share Capital

Our Board of Directors follows a policy of declaring, subject to legally available funds, a quarterly cash dividend on each share of our Series A common stock, par value \$0.0001 per share unless the Board of Directors, in its sole discretion, determines otherwise. The amount available to pay cash dividends is restricted by our Amended Credit Agreement, the 4.625% Notes, the 5.875% Notes and the 6.625% Notes.

On April 23, 2012, we announced that our Board of Directors approved a 25% increase in the Celanese quarterly Series A common stock cash dividend. The Board of Directors increased the quarterly dividend rate from \$0.06 to \$0.075 per share of Series A common stock on a quarterly basis, which equates to an increase from \$0.24 to \$0.30 per share of Series A common stock annually. The new dividend rate became effective August 2012.

On February 6, 2013, we declared a cash dividend of \$0.075 per share on our Series A common stock amounting to \$12 million. The cash dividends are for the period from November 1, 2012 to January 31, 2013 and will be paid on February 28, 2013 to holders of record as of February 19, 2013.

Based on the increase in the quarterly dividend rate from \$0.06 to \$0.075 per share of Series A common stock beginning August 2012 and the number of outstanding shares as of December 31, 2012, cash dividends to be paid in 2013 are expected to be slightly higher than those paid in 2012.

Our Board of Directors authorized the repurchase of our Common Stock as follows:

	Authorized Amount (In \$ millions)
February 2008	400
October 2008	100
April 2011	129
October 2012	264
As of December 31, 2012	893

These authorizations give management discretion in determining the timing and conditions under which shares may be repurchased. This repurchase program does not have an expiration date.

The share repurchase activity pursuant to this authorization is as follows:

	Year Ended December 31,			Total From
	2012	2011	2010	February 2008 Through December 31, 2012
Shares repurchased	1,059,719 ⁽¹⁾	652,016	1,667,592	13,142,527
Average purchase price per share	\$42.44	\$46.99	\$28.77	\$38.14
Amount spent on repurchased shares (in millions)	\$45	\$31	\$48	\$501

Excludes 5,823 shares withheld from employee to cover statutory minimum withholding requirements for personal ⁽¹⁾ income taxes related to the vesting of restricted stock. Restricted stock is considered outstanding at the time of issuance and therefore, the shares withheld are treated as treasury shares.

The purchase of treasury stock reduces the number of shares outstanding and the repurchased shares may be used by us for compensation programs utilizing our stock and other corporate purposes. We account for treasury stock using the cost method and include treasury stock as a component of stockholders' equity.

Contractual Debt and Cash Obligations

The following table sets forth our fixed contractual debt and cash obligations as of December 31, 2012.

	Total	Payments due by period			
		Less Than 1 Year	Years 2 & 3	Years 4 & 5	After 5 Years
(In \$ millions)					
Fixed contractual debt obligations					
Senior notes	1,500	—	—	—	1,500
Term C loan facility	977	10	20	947	—
Credit linked revolving facility	50	—	50	—	—
Interest payments on debt and other obligations	1,256	(1) 186	323	277	470
Capital lease obligations	244	13	26	32	173
Other debt	327	(2) 145	—	—	182
Total	4,354	354	419	1,256	2,325
Operating leases	307	49	86	56	116
Uncertain tax positions, including interest and penalties	246	65	—	—	181
Unconditional purchase obligations	3,332	(4) 800	995	631	906
Pension and other postretirement funding obligations	731	(5) 55	220	216	240
Environmental and asset retirement obligations	166	58	47	19	42
Total	9,136	1,381	1,767	2,178	3,810

We have outstanding interest rate swap agreements with a notional value of \$1.1 billion that expire on January 2, 2014 that have the economic effect of modifying the variable rate obligations associated with our US term loans into fixed interest obligations. The impact of these interest rate swaps was factored into the calculation of the future interest payments on long-term debt. Future interest expense is calculated using the rate in effect on December 31, 2012.

(1) Other debt is primarily made up of fixed rate pollution control and industrial revenue bonds, short-term borrowings from affiliated companies and other bank obligations.

(2) Due to uncertainties in the timing of the effective settlement of tax positions with the respective taxing authorities, we are unable to determine the timing of payments related to our uncertain tax obligations, including interest and penalties. These amounts are therefore reflected in "After 5 Years".

(3) Unconditional purchase obligations primarily represent the take-or-pay provisions included in certain long-term purchase agreements. We do not expect to incur material losses under these arrangements. These amounts also include other purchase obligations such as maintenance and service agreements, energy and utility agreements, consulting contracts, software agreements and other miscellaneous agreements and contracts, obtained via a survey of the Company.

(4) Excludes expected payments from nonqualified trusts related to nonqualified pension plans of \$202 million.

Contractual Guarantees and Commitments

As of December 31, 2012, we have current standby letters of credit of \$70 million and bank guarantees of \$12 million outstanding which are irrevocable obligations of an issuing bank that ensure payment to third parties in the event that certain subsidiaries fail to perform in accordance with specified contractual obligations. The likelihood is remote that material payments will be required under these agreements. In addition, the senior notes issued by Celanese US are guaranteed by Celanese and certain domestic subsidiaries of Celanese US. See [Note 13 - Debt](#) in the accompanying consolidated financial statements for a description of this guarantee and the guarantees under our senior credit facility.

See [Note 23 - Commitments and Contingencies](#) in the accompanying consolidated financial statements for a discussion of commitments and contingencies related to legal and regulatory proceedings.

Off-Balance Sheet Arrangements

We have not entered into any material off-balance sheet arrangements.

Market Risks

Please see Item 7A. Quantitative and Qualitative Disclosure about Market Risk of this Form 10-K for additional information about our Market Risks.

Critical Accounting Policies and Estimates

Our consolidated financial statements are based on the selection and application of significant accounting policies. The preparation of consolidated financial statements in conformity with US Generally Accepted Accounting Principles ("US GAAP") requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues, expenses and allocated charges during the reporting period. Actual results could differ from those estimates. However, we are not currently aware of any reasonably likely events or circumstances that would result in materially different results.

We believe the following accounting policies and estimates are critical to understanding the financial reporting risks present in the current economic environment. These matters, and the judgments and uncertainties affecting them, are also essential to understanding our reported and future operating results. See Note 2 - Summary of Accounting Policies in the accompanying consolidated financial statements for further discussion of our significant accounting policies.

Recoverability of Long-Lived Assets

Recoverability of Goodwill and Indefinite-Lived Assets

We test for impairment of goodwill at the reporting unit level. Our reporting units are either our operating business segments or one level below our operating business segments for which discrete financial information is available and for which operating results are regularly reviewed by business segment management and the chief operating decision maker. Our operating business segments have been designated as our reporting units and include Advanced Engineered Materials, Acetate Products, Nutrinova, Emulsions, Celanese EVA Performance Polymers and Acetyl Intermediates businesses. We assess the recoverability of the carrying value of our goodwill and other indefinite-lived intangible assets annually during the third quarter of our fiscal year using June 30 balances or whenever events or changes in circumstances indicate that the carrying amount of the asset may not be fully recoverable. Recoverability of goodwill and other indefinite-lived intangible assets is measured using a discounted cash flow model incorporating discount rates commensurate with the risks involved for each reporting unit. Use of a discounted cash flow model is common practice in impairment testing in the absence of available transactional market evidence to determine the fair value.

The key assumptions used in the discounted cash flow valuation model include discount rates, growth rates, cash flow projections and terminal value rates. Discount rates, growth rates and cash flow projections are the most sensitive and susceptible to change as they require significant management judgment. Discount rates are determined by using a weighted average cost of capital ("WACC"). The WACC considers market and industry data as well as company-specific risk factors for each reporting unit in determining the appropriate discount rate to be used. The discount rate utilized for each reporting unit is indicative of the return an investor would expect to receive for investing in such a business. Operational management, considering industry and company-specific historical and projected data, develops growth rates and cash flow projections for each reporting unit. Terminal value rate determination follows common methodology of capturing the present value of perpetual cash flow estimates beyond the last projected period assuming a constant WACC and low long-term growth rates. If the calculated fair value is less than the current carrying value, impairment of the reporting unit may exist. If the recoverability test indicates potential impairment, we calculate an implied fair value of goodwill for the reporting unit. The implied fair value of goodwill is determined in a manner similar to how goodwill is calculated in a business combination. If the implied fair value of goodwill exceeds the carrying value of goodwill assigned to the reporting unit, there is no impairment. If the carrying value of goodwill assigned to a reporting unit exceeds the implied fair value of the goodwill, an impairment charge is recorded to write down the carrying value. An impairment loss cannot exceed the carrying value of goodwill

assigned to a reporting unit but may indicate certain long-lived and amortizable intangible assets associated with the reporting unit may require additional impairment testing.

Management tests indefinite-lived intangible assets utilizing the relief from royalty method to determine the estimated fair value for each indefinite-lived intangible asset. The relief from royalty method estimates the Company's theoretical royalty savings from ownership of the intangible asset. Key assumptions used in this model include discount rates, royalty rates, growth rates, sales projections and terminal value rates. Discount rates, royalty rates, growth rates and sales projections are the assumptions most sensitive and susceptible to change as they require significant management judgment. Discount rates used are similar to the rates estimated by the WACC considering any differences in company-specific risk factors. Royalty rates are established by management and are periodically substantiated by third-party valuation consultants. Operational management, considering industry and company-specific historical and projected data, develops growth rates and sales projections associated with each indefinite-lived intangible asset. Terminal value rate determination follows common methodology of capturing the present value of perpetual sales estimates beyond the last projected period assuming a constant WACC and low long-term growth rates.

For all significant goodwill and indefinite-lived intangible assets, the estimated fair value of the asset exceeded the carrying value of the asset by a substantial margin at the date of the most recent impairment test.

Recoverability of Long-Lived and Amortizable Intangible Assets

We assess the recoverability of long-lived and amortizable intangible assets whenever events or circumstances indicate that the carrying value of the asset may not be recoverable. Examples of a change in events or circumstances include, but are not limited to, a decrease in the market price of the asset, a history of cash flow losses related to the use of the asset or a significant adverse change in the extent or manner in which an asset is being used. To assess the recoverability of long-lived and amortizable intangible assets we compare the carrying amount of the asset or group of assets to the future net undiscounted cash flows expected to be generated by the asset or asset group. Long-lived and amortizable intangible assets are tested for recognition and measurement of an impairment loss at the lowest level for which identifiable cash flows are largely independent of the cash flows of other assets and liabilities. If such assets are considered impaired, the impairment recognized is measured as the amount by which the carrying amount of the asset exceeds the fair value of the asset.

The development of future net undiscounted cash flow projections require management projections related to sales and profitability trends and the remaining useful life of the asset. Projections of sales and profitability trends are the assumptions most sensitive and susceptible to change as they require significant management judgment. These projections are consistent with projections we use to manage our operations internally. When impairment is indicated, a discounted cash flow valuation model similar to that used to value goodwill at the reporting unit level, incorporating discount rates commensurate with risks associated with each asset, is used to determine the fair value of the asset to measure potential impairment. We believe the assumptions used are reflective of what a market participant would have used in calculating fair value.

Valuation methodologies utilized to evaluate goodwill and indefinite-lived intangible, amortizable intangible and long-lived assets for impairment were consistent with prior periods. We periodically engage third-party valuation consultants to assist us with this process. Specific assumptions discussed above are updated at the date of each test to consider current industry and company-specific risk factors from the perspective of a market participant. The current business environment is subject to evolving market conditions and requires significant management judgment to interpret the potential impact to the Company's assumptions. To the extent that changes in the current business environment result in adjusted management projections, impairment losses may occur in future periods.

Income Taxes

We regularly review our deferred tax assets for recoverability and establish a valuation allowance if needed based on historical taxable income, projected future taxable income, applicable tax planning strategies, and the expected timing of the reversals of existing temporary differences. A valuation allowance is provided when it is more likely than not that some portion or all of the deferred tax assets will not be realized. In forming our judgment regarding the recoverability of deferred tax assets related to deductible temporary differences and tax attribute carryforwards, we give weight to positive and negative evidence based on the extent to which the forms of evidence can be objectively verified. We attach the most weight to historical earnings due to its verifiable nature. Weight is attached to tax

planning strategies if the strategies are prudent and feasible and implementable without significant obstacles. Less weight is attached to forecasted future earnings due to its subjective nature, and expected timing of reversal of taxable temporary differences is given little weight unless the reversal of taxable and deductible temporary differences coincide. Valuation allowances are established primarily on net operating loss carryforwards and other deferred tax assets in the US, Luxembourg, France, Spain, China, the United Kingdom and Canada. We have appropriately reflected increases and decreases in our valuation allowance based on the overall weight of positive versus negative evidence on a jurisdiction by jurisdiction basis.

We record accruals for income taxes and associated interest that may become payable in future years as a result of audits by tax authorities. We recognize tax benefits when it is more likely than not (likelihood of greater than 50%), based on technical merits, that the position will be sustained upon examination. Tax positions that meet the more-likely-than-not threshold are measured using a probability weighted approach as the largest amount of tax benefit that is greater than 50% likely of being realized upon settlement. Whether the more-likely-than-not recognition threshold is met for a tax position is a matter of judgment based on the individual facts and circumstances of that position evaluated in light of all available evidence.

The recoverability of deferred tax assets and the recognition and measurement of uncertain tax positions are subject to various assumptions and management judgment. If actual results differ from the estimates made by management in establishing or maintaining valuation allowances against deferred tax assets, the resulting change in the valuation allowance would generally impact earnings or Other comprehensive income depending on the nature of the respective deferred tax asset. In addition, the positions taken with regard to tax contingencies may be subject to audit and review by tax authorities which may result in future taxes, interest and penalties.

Benefit Obligations

We have pension and other postretirement benefit plans covering substantially all employees who meet eligibility requirements. With respect to its US qualified defined benefit pension plan, minimum funding requirements are determined by the Pension Protection Act of 2006. Various assumptions are used in the calculation of the actuarial valuation of the employee benefit plans. These assumptions include the discount rate, compensation levels, expected long-term rates of return on plan assets and trends in health care costs. In addition to the above mentioned assumptions, actuarial consultants use factors such as withdrawal and mortality rates to estimate the projected benefit obligation. The actuarial assumptions used may differ materially from actual results due to changing market and economic conditions, higher or lower withdrawal rates or longer or shorter life spans of participants. These differences may result in a significant impact to the amount of net periodic benefit cost recorded in future periods.

The amounts recognized in the consolidated financial statements related to pension and other postretirement benefits are determined on an actuarial basis. A significant assumption used in determining our net periodic benefit cost is the expected long-term rate of return on plan assets. As of December 31, 2012, we assumed an expected long-term rate of return on plan assets of 8.5% for the US defined benefit pension plans, which represent approximately 83% and 84% of our fair value of pension plan assets and projected benefit obligation, respectively. On average, the actual return on the US qualified defined pension plans' assets over the long-term (20 years) has exceeded 8.5%.

Another estimate that affects our pension and other postretirement net periodic benefit cost is the discount rate used in the annual actuarial valuations of pension and other postretirement benefit plan obligations. At the end of each year, we determine the appropriate discount rate, used to determine the present value of future cash flows currently expected to be required to settle the pension and other postretirement benefit obligations. The discount rate is generally based on the yield on high-quality corporate fixed-income securities. As of December 31, 2012, we decreased the discount rate to 3.8% from 4.6% as of December 31, 2011 for the US plans.

Other postretirement benefit plans provide medical and life insurance benefits to retirees who meet minimum age and service requirements. The key determinants of the accumulated postretirement benefit obligation ("APBO") are the discount rate and the health care cost trend rate. The health care cost trend rate has a significant effect on the reported amounts of APBO and related expense.

Pension assumptions are reviewed annually on a plan and country-specific basis by third-party actuaries and senior management. Such assumptions are adjusted as appropriate to reflect changes in market rates and outlook. We determine the long-term expected rate of return on plan assets by considering the current target asset allocation, as well as the historical and expected rates of return on various asset categories in which the plans are invested. A single long-term expected rate of return on plan assets is then calculated for each plan as the weighted average of the target asset allocation and the long-term expected rate of return assumptions for each asset category within each plan.

Differences between actual rates of return of plan assets and the long-term expected rate of return on plan assets are generally not recognized in net periodic benefit cost in the year that the difference occurs. These differences are deferred and amortized into net periodic benefit cost over the average remaining future service of employees. We

apply the long-term expected rate of return on plan assets to a market-related value of plan assets to stabilize variability in the plan asset values.

57

The estimated increases in pension and postretirement net periodic benefit costs that would occur in 2013 from a change in the indicated assumptions are as follows:

	Change in Rate	Net Periodic Benefit Costs (In \$ millions)
US Pension Benefits		
Decrease in the discount rate	0.50	% 10
Decrease in the long-term expected rate of return on plan assets ⁽¹⁾	0.50	% 11
US Postretirement Benefits		
Decrease in the discount rate	0.50	% —
Increase in the annual health care cost trend rates	1.00	% —
Non-US Pension Benefits		
Decrease in the discount rate	0.50	% 2
Non-US Postretirement Benefits		
Decrease in the discount rate	0.50	% —
Increase in the annual health care cost trend rates	1.00	% —

⁽¹⁾ Excludes nonqualified pension plans.

Accounting for Commitments and Contingencies

We are subject to a number of legal and regulatory proceedings, lawsuits, claims, and investigations, incidental to the normal conduct of our past and current business, relating to and including product liability, intellectual property, land disputes, commercial contracts, employment, antitrust, workers' compensation, chemical exposure, asbestos exposure, prior acquisitions and divestitures, past waste disposal practices and release of chemicals into the environment, which are handled and defended in the ordinary course of business. We routinely assess the likelihood of any adverse judgments or outcomes to these matters as well as ranges of probable and reasonably estimable losses. Reasonable estimates involve judgments made by us after considering a broad range of information including: notifications, demands, settlements which have been received from a regulatory authority or private party, estimates performed by independent consultants and outside counsel, available facts, identification of other potentially responsible parties and their ability to contribute, as well as prior experience. With respect to environmental remediation liabilities, it is our policy to accrue through fifteen years, unless we have government orders or other agreements that extend beyond fifteen years. A determination of the amount of loss contingency required, if any, is assessed in accordance with Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") Topic 450, Contingencies, and recorded if probable and estimable after careful analysis of each individual matter. The required reserves may change in the future due to new developments in each matter and as additional information becomes available.

Recent Accounting Pronouncements

See [Note 3 - Accounting Pronouncements](#) in the accompanying consolidated financial statements included in this Annual Report on Form 10-K for a discussion of recent accounting pronouncements.

Item 7A. Quantitative and Qualitative Disclosures about Market Risk

Market Risks

Our financial market risk consists principally of exposure to currency exchange rates, interest rates and commodity prices. Exchange rate and interest rate risks are managed with a variety of techniques, including use of derivatives. We have in place policies of hedging against changes in currency exchange rates, interest rates and commodity prices as described below. Contracts to hedge exposures are primarily accounted for under FASB ASC Topic 815, Derivatives and Hedging ("FASB ASC Topic 815").

See [Note 21 - Derivative Financial Instruments](#) in the accompanying consolidated financial statements for further discussion of our market risk management and the related impact on our financial position and results of operations.

Interest Rate Risk Management

We use interest rate swap agreements to manage the interest rate risk of our total debt portfolio and related overall cost of borrowing. To reduce the interest rate risk inherent in our variable rate borrowings, we utilize interest rate swap agreements to convert a portion of our variable rate borrowings to a fixed rate obligation. A portion of these interest rate swap agreements are designated as cash flow hedges.

Our US-dollar interest rate swap derivative arrangements are as follows:

As of December 31, 2012

Notional Value (In \$ millions)	Effective Date	Expiration Date	Fixed Rate ⁽¹⁾	
1,100	January 2, 2012	January 2, 2014	1.71	%
500	January 2, 2014	January 2, 2016	1.02	%

⁽¹⁾ Fixes the LIBOR portion of our US-dollar denominated variable rate borrowings. See [Note 13 - Debt](#) in the accompanying consolidated financial statements for further information.

Upon issuance of the 4.625% Notes and \$400 million paydown of the Term C loan facility on November 13, 2012, it became probable that the hedged interest payments associated with \$395 million of our variable rate US-dollar debt would not occur. Accordingly, we dedesignated as cash flow hedges a notional value of \$395 million of the \$1.1 billion notional value US-dollar interest rate swap agreements expiring January 2, 2014 and a loss of \$5 million was reclassified out of Accumulated other comprehensive income (loss), net, into Interest expense in the accompanying consolidated statements of operations during the three months ended December 31, 2012. Future mark-to-market adjustments on these dedesignated interest rate swap agreements will be recorded in Interest expense through their expiration on January 2, 2014. See [Note 13 - Debt](#) in the accompanying consolidated financial statements for further information.

As of December 31, 2012, we had \$781 million, €214 million and CNY680 million of variable rate debt and outstanding US-dollar interest rate swap agreements with a notional value of \$1.1 billion that expire January 2, 2014. These interest rate swap agreements have the economic effect of modifying the US-dollar variable rate obligations into fixed interest obligations. Accordingly, a 1% increase in interest rates would increase annual interest expense by \$1 million.

Foreign Exchange Risk Management

The primary business objective of this hedging program is to maintain an approximately balanced position in foreign currencies so that exchange gains and losses resulting from exchange rate changes, net of related tax effects, are minimized. It is our policy to minimize currency exposures and to conduct operations either within functional currencies or using the protection of hedge strategies. Accordingly, we enter into foreign currency forwards and swaps to minimize our exposure to foreign currency fluctuations. From time to time we may also hedge our currency exposure related to forecasted transactions. Forward contracts are not designated as hedges under FASB ASC Topic 815.

The following table indicates the total US dollar equivalents of net foreign exchange exposure related to (short) long foreign exchange forward contracts outstanding by currency. All of the contracts included in the table below will have approximately offsetting effects from actual underlying payables, receivables, intercompany loans or other assets or liabilities subject to foreign exchange remeasurement.

	2013 Maturity (In \$ millions)	
Currency		
Euro	(222)
British pound sterling	(27)
Chinese renminbi	(258)
Mexican peso	5	
Singapore dollar	45	
Canadian dollar	61	
Japanese yen	(3)
Brazilian real	(14)
Swedish krona	(14)
Other	5	
Total	(422)

Additionally, a portion of our assets, liabilities, revenues and expenses are denominated in currencies other than the US dollar. Fluctuations in the value of these currencies against the US dollar can have a direct and material impact on the business and financial results. For example, a decline in the value of the Euro versus the US dollar results in a decline in the US dollar value of our sales and earnings denominated in Euros due to translation effects. Likewise, an increase in the value of the Euro versus the US dollar would result in an opposite effect.

Commodity Risk Management

We have exposure to the prices of commodities in our procurement of certain raw materials. We manage our exposure to commodity risk primarily through the use of long-term supply agreements, multi-year purchasing and sales agreements and forward purchase agreements. We regularly assess our practice of purchasing a portion of our commodity requirements under forward purchase agreements and other raw material hedging instruments in accordance with changes in market conditions. Forward purchases and swap contracts for raw materials are principally settled through actual delivery of the physical commodity. For qualifying contracts, we have elected to apply the normal purchases and normal sales exception of FASB ASC Topic 815 based on the probability at the inception and throughout the term of the contract that we would not settle net and the transaction would settle by physical delivery of the commodity. As such, realized gains and losses on these contracts are included in the cost of the commodity upon the settlement of the contract.

In addition, we occasionally enter into financial derivatives to hedge a component of a raw material or energy source. Typically, these types of transactions do not qualify for hedge accounting. These instruments are marked to market at each reporting period and gains (losses) are included in Cost of sales in the accompanying consolidated statements of operations. We recognized no gain or loss from these types of contracts during the years ended December 31, 2012, 2011 and 2010. As of December 31, 2012, we did not have any open financial derivative contracts for commodities.

Item 8. Financial Statements and Supplementary Data

Our consolidated financial statements and supplementary data are included in Item 15. Exhibits and Financial Statement Schedules of this Annual Report on Form 10-K.

For a discussion of material events affecting performance in each quarter, see Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations. All amounts in the table above have been retroactively

adjusted for the effects of discontinued operations.

61

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

None.

Item 9A. Controls and Procedures

Under the supervision and with the participation of our management, including the Chief Executive Officer and Chief Financial Officer, we have evaluated the effectiveness of our disclosure controls and procedures pursuant to Exchange Act Rule 13a-15(b) as of the end of the period covered by this Annual Report. Based on that evaluation, as of December 31, 2012, the Chief Executive Officer and Chief Financial Officer have concluded that our disclosure controls and procedures are effective.

Changes in Internal Control Over Financial Reporting

During the three months ended December 31, 2012, there were no changes in our internal control over financial reporting that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Report of Management on Internal Control Over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting for the Company. Internal control over financial reporting is a process to provide reasonable assurance regarding the reliability of our financial reporting for external purposes in accordance with accounting principles generally accepted in the United States of America. Internal control over financial reporting includes maintaining records that in reasonable detail accurately and fairly reflect our transactions; providing reasonable assurance that transactions are recorded as necessary for preparation of our consolidated financial statements; providing reasonable assurance that receipts and expenditures of company assets are made in accordance with management authorization; and providing reasonable assurance that unauthorized acquisition, use or disposition of company assets that could have a material effect on our consolidated financial statements would be prevented or detected on a timely basis. Because of its inherent limitations, internal control over financial reporting is not intended to provide absolute assurance that a misstatement of our consolidated financial statements would be prevented or detected.

Management conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework in Internal Control — Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on this evaluation, management concluded that the Company's internal control over financial reporting was effective as of December 31, 2012. The Company's independent registered public accounting firm, KPMG LLP, has issued an audit report on the effectiveness of the Company's internal control over financial reporting. Their report follows.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Stockholders

Celanese Corporation:

We have audited Celanese Corporation and subsidiaries' (the "Company") internal control over financial reporting as of December 31, 2012, based on criteria established in Internal Control — Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Report of Management on Internal Control Over Financial Reporting. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2012, based on criteria established in Internal Control — Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of the Company as of December 31, 2012 and 2011, and the related consolidated statements of operations, comprehensive income (loss), equity, and cash flows for each of the years in the three-year period ended December 31, 2012, and our report dated February 8, 2013 expressed an unqualified opinion on those consolidated financial statements.

Item 9B. Other Information

None.

PART III

Item 10. Directors, Executive Officers and Corporate Governance

The information required by this Item 10 is incorporated herein by reference from the sections captioned "Proposal 1: Election of Directors," "Corporate Governance" and "Stock Ownership Information - Section 16(a) Beneficial Ownership Reporting Compliance" of the Company's definitive proxy statement for the 2013 annual meeting of stockholders to be filed with the Securities and Exchange Commission pursuant to Regulation 14A under the Securities Exchange Act of 1934, as amended (the "2013 Proxy Statement"). Information about executive officers of the Company is contained in Part I of this Annual Report.

Codes of Ethics

The Company has adopted a Business Conduct Policy for directors, officers and employees along with a Financial Code of Ethics for its principal executive officer, principal financial officer, principal accounting officer or controller, or persons performing similar functions. These codes are available on the corporate governance portal of the Company's investor relations website at <http://www.celanese.com>. The Company intends to satisfy the disclosure requirements under Item 5.05 of Form 8-K regarding amendments to and waivers from these codes by posting such information on the same website.

Item 11. Executive Compensation

The information required by this Item 11 is incorporated herein by reference from the sections captioned "Compensation Discussion and Analysis," "Risk Assessment of Compensation Practices," "Compensation Tables," "Potential Payments upon Termination or Change in Control," "Compensation Committee Interlocks and Insider Participation" and "Compensation Committee Report" of the 2013 Proxy Statement.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

The information with respect to beneficial ownership required by this Item 12 is incorporated herein by reference from the section captioned "Stock Ownership Information - Principal Stockholders and Beneficial Owners" of the 2013 Proxy Statement.

Equity Compensation Plans

Securities Authorized for Issuance Under Equity Compensation Plans

The following information is provided as of December 31, 2012 with respect to equity compensation plans:

Plan Category	Number of Securities to be Issued upon Exercise of Outstanding Options, Warrants and Rights	Weighted Average Exercise Price of Outstanding Options, Warrants and Rights	Number of Securities Remaining Available for Future Issuance Under Equity Compensation Plans (excluding securities reflected in column (a))
	(a)	(b)	(c)
Equity compensation plans approved by security holders	1,811,518	(1) \$30.31	25,332,510 (2)
Equity compensation plans not approved by security holders ⁽³⁾	424,870	(4) \$29.58	—
Total	2,236,388	(5)	25,332,510

(1) Includes 1,369,200 restricted stock units ("RSUs") granted under the Celanese Corporation 2009 Global Incentive Plan, as amended and restated April 19, 2012, (the "2009 Plan"), including shares that may be issued pursuant to outstanding performance-based RSUs, assuming currently estimated maximum potential performance; actual shares may vary, depending on actual performance. Upon vesting, a share of the Company's Series A Common

Stock is issued for each restricted stock unit. Column (b) does not take these awards into account because they do not have an exercise price.

(2) Includes shares available for future issuance under the Celanese Corporation 2009 Employee Stock Purchase Plan approved by stockholders on April 23, 2009 (the "ESPP"). As of December 31, 2012, an aggregate of 14,000,000 shares of our Series A Common Stock were available for future issuance under the ESPP. No shares have been offered for purchase under the ESPP as of December 31, 2012.

(3) The shares to be issued under plans not approved by stockholders relate to the Celanese Corporation 2004 Stock Incentive Plan (the "2004 Plan"), which is our former broad-based stock incentive plan for executive officers, key employees and directors. No further awards were made pursuant to the 2004 Plan upon stockholder approval of the 2009 Plan in April 2009. The 2004 Plan and the 2009 Plan are described in more detail in Note 19 - Management Compensation Plans in the accompanying consolidated financial statements. Additionally, there are 28,046 shares of phantom stock for compensation for director services deferred by certain of our non-employee directors under the 2008 Deferred Compensation Plan which are not reflected in column (a). Each share of phantom stock represents the right to receive one share of Series A Common Stock.

(4) Includes no outstanding RSUs granted under the 2004 Plan.

(5) If the performance-based RSUs included in this total vest at the target level (as opposed to the stretch level), the aggregate awards outstanding at December 31, 2012 would be 1,699,880. This is comprised of 823,095 stock options, 387,183 time-based RSUs granted to employees, 44,095 time-based restricted stock awards granted to our Chief Executive Officer, 16,299 time-based RSUs granted to non-employee directors and 429,208 performance-based RSUs assuming target performance.

Item 13. Certain Relationships and Related Transactions, and Director Independence

The information required by this Item 13 is incorporated herein by reference from the section captioned "Certain Relationships and Related Person Transactions" and "Corporate Governance — Director Independence" of the 2013 Proxy Statement.

Item 14. Principal Accounting Fees and Services

The information required by this Item 14 is incorporated herein by reference from the section captioned "Proposal 3: Ratification of Independent Registered Public Accounting Firm" of the 2013 Proxy Statement.

PART IV

Item 15. Exhibits, Financial Statement Schedules

1. Financial Statements. The report of our independent registered public accounting firm and our consolidated financial statements are listed below and begin on page 69 of this Annual Report on Form 10-K.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Stockholders
Celanese Corporation:

We have audited the accompanying consolidated balance sheets of Celanese Corporation and subsidiaries (the "Company") as of December 31, 2012 and 2011, and the related consolidated statements of operations, comprehensive income (loss), equity, and cash flows for each of the years in the three-year period ended December 31, 2012. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Company as of December 31, 2012 and 2011, and the results of its operations and its cash flows for each of the years in the three-year period ended December 31, 2012, in conformity with U.S. generally accepted accounting principles.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of December 31, 2012, based on criteria established in Internal Control — Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated February 8, 2013 expressed an unqualified opinion on the effectiveness of the Company's internal control over financial reporting.
