_____)

NOTE REGARDING FORWARD-LOOKING STATEMENTS

Some information in this report may contain forward-looking statements within the meaning of Section 27A of the U.S. Securities Act of 1933 and Section 21E of the U.S. Securities Exchange Act of 1934. We have based these forward-looking statements on our current beliefs, expectations and intentions as to facts, actions and events that will or may occur in the future. Such statements generally are identified by forward-looking words such as believe, plan, anticipate, continue, estimate, expect, may, will or other similar words.

A forward-looking statement may include a statement of the assumptions or bases underlying the forward-looking statement. We have chosen these assumptions or bases in good faith. These forward-looking statements are subject to risks, uncertainties and assumptions, some of which are beyond our control. In addition, these forward-looking statements reflect our current views with respect to future events and are not a guarantee of future performance. Actual results may differ materially from information contained in the forward-looking statements as a result of a number of factors, including, without limitation, the risk factors set forth in Item 3. Key Information Risk Factors in our annual report on Form 20-F for the fiscal year ended December 31, 2005. You should also keep in mind that any forward-looking statement made by us in this report or elsewhere speaks only as at the date on which we made it. New risks and uncertainties come up from time to time, and it is impossible for us to predict these events or how they may affect us. We have no duty to, and do not intend to, update or revise the statements in this report after the date hereof. In light of these risks and uncertainties, you should keep in mind that actual results may differ materially from any forward-looking statement made in this report or elsewhere.

PRESS RELEASE

WORLDWIDE TELECOMMUNICATIONS LEADERS TO BUILD FIRST HIGH BANDWIDTH OPTICAL FIBER SUBMARINE CABLE SYSTEM FROM SOUTHEAST ASIA TO USA

A historic landmark in the development of telecommunications
between South East Asia and USA

KUALA LUMPUR, May 2, 2007 Major telecommunications industry leaders recently signed an agreement to build the first high-bandwidth optical fiber submarine cable system from Southeast Asia direct to the United States. Known as the Asia-America Gateway (AAG) Cable System, the system is expected to cost approximately US\$500 million.

This cable project is spearheaded by 17 parties, including AT&T Inc., Bharti, BT Global Network Services, CAT Telecom, ETPI, PCP Company Limited, PLDT, PT Indosat, Saigon Postel Corporation, StarHub, Telekom Malaysia, TELKOM Indonesia, Telstra, the Government of Brunei Darussalam, TNZL, Viettel, and VNPT.

The Supply Contract for the construction of the AAG will be signed between the AAG and the consortium of Alcatel-Lucent and NEC later on the same day in Kuala Lumpur.

The 20,000 km long AAG will connect Malaysia, Singapore, Thailand, Brunei Darussalam, Vietnam, Hong Kong SAR, Philippines, Guam, Hawaii and the US West Coast. Besides serving these countries/regions, the cable system will also provide seamless interconnection with other major cable systems connecting Europe, Australia, other parts of Asia and Africa. The AAG is expected to carry commercial traffic by 4th Quarter of 2008.

The first direct Terabit-scale submarine cable network between Southeast Asia and North America is a historic landmark in the development of telecommunications between the two regions.

The AAG is designed to provide 1.92 Terabit per second using the field-proven Dense Wavelength Division Multiplexing (DWDM) technology to provide upgradeable, future proof transmission facilities that support Internet and e-commerce.

Page 5 of 6

Exhibit 1

The AAG is expected to meet the forecasted explosive growth in bandwidth requirements for new and revolutionary broadband applications such as IP, video, data, and other multimedia services. With such design, the AAG is able to support about 130,000 simultaneous High Definition Television (HDTV) signals.

The birth of the AAG will revolutionize high bandwidth delivery between Asia and the USA. The AAG, designed for broadband traffic, will provide much-needed diversity in traditional routes to the US and ensure alternate routes, expanded capacity and high levels of service during potential disasters. The AAG, with its large bandwidth and high quality transmission technology, will help meet the present and future burgeoning growth in telecommunications traffic.
