A Few Words on Closed-End Funds

Royce & Associates, LLC manages three closed-end funds: Royce Value Trust, the first small-cap value closed-end fund offering; Royce Micro-Cap Trust, the only micro-cap closed-end fund; and Royce Focus Trust, a closed-end fund that invests in a limited number of primarily small-cap companies.

A closed-end fund is an investment company whose shares are listed and traded on a stock exchange. Like all investment companies, including open-end mutual funds, the assets of a closed-end fund are professionally managed in accordance with the investment objectives and policies approved by the fund s Board of Directors. A closed-end fund raises cash for investment by issuing a fixed number of shares through initial and other public offerings that may include shelf offerings and periodic rights offerings. Proceeds from the offerings are invested in an actively managed portfolio of securities. Investors wanting to buy or sell shares of a publicly traded closed-end fund after the offerings must do so on a stock exchange, as with any publicly traded stock. This is in contrast to open-end mutual funds, in which the fund sells and redeems its shares on a continuous basis.

A Closed-End Fund Offers Several Distinct Advantages Not Available From An Open-End Fund Structure

- n Since a closed-end fund does not issue redeemable securities or offer its securities on a continuous basis, it does not need to liquidate securities or hold uninvested assets to meet investor demands for cash redemptions, as an open-end fund must.
- n In a closed-end fund, not having to meet investor redemption requests or invest at inopportune times is ideal for value managers who attempt to buy stocks when prices are depressed and sell securities when prices are high.
- n A closed-end fund may invest more freely in less liquid portfolio securities because it is not subject to potential stockholder redemption demands. This is particularly beneficial for Royce-managed closed-end funds, which invest in small- and micro-cap securities.

- n The fixed capital structure allows permanent leverage to be employed as a means to enhance capital appreciation potential.
- Unlike Royce s open-end funds, our closed-end funds are able to distribute capital gains on a quarterly basis. Each of the Funds has adopted a quarterly distribution policy for its common stock.

We believe that the closed-end fund structure is very suitable for the long-term investor who understands the benefits of a stable pool of capital.

Why Dividend Reinvestment Is Important

A very important component of an investor s total return comes from the reinvestment of distributions. By reinvesting distributions, our investors can maintain an undiluted investment in a Fund. To get a fair idea of the impact of reinvested distributions, please see the charts on pages 13, 15 and 17. For additional information on the Funds Distribution Reinvestment and Cash Purchase Options and the benefits for stockholders, please see page 19 or visit our website at www.roycefunds.com.

Semiannual Report to Stockholders	10

For more than 30 years, we have used a value approach to invest in smaller-cap securities. We focus primarily on the quality of a company balance sheet, its ability to generate free cash flow and other measures of profitability or sound financial condition. At times, we may also look at other factors, such as a company unrecognized asset values, its future growth prospects or its turnaround potential following an earnings disappointment or other business difficulties. We then use these factors to assess the company current worth, basing the assessment on either what we believe a knowledgeable buyer might pay to acquire the entire company, or what we think the value of the company should be in the stock market.

Important Performance and Risk Information

All performance information in this Review and Report reflects past performance, is presented on a total return basis and reflects the reinvestment of distributions. Past performance is no guarantee of future results. Performance information does not reflect the deduction of taxes that a stockholder would pay on distributions or on the sale of Fund shares. Investment return and principal value of an investment will fluctuate, so that shares may be worth more or less than their original cost when sold. Current performance may be higher or lower than performance quoted. Current month-end performance may be obtained at www.roycefunds.com. The Royce Funds invest primarily in securities of small-cap and/or micro-cap companies, which may involve considerably more risk than investments in securities of larger-cap companies.

The thoughts expressed in this Review and Report to Stockholders concerning recent market movements and future prospects for small company stocks are solely the opinion of Royce at June 30, 2007, and, of course, historical market trends are not necessarily indicative of future market movements. Statements regarding the future prospects for particular securities held in the Funds portfolios and Royce investment intentions with respect to those securities reflect Royce opinions as of June 30, 2007 and are subject to change at any time without notice. There can be no assurance that securities mentioned in this Review and Report to Stockholders will be included in any Royce-managed portfolio in the future.

^{*}Not annualized.

^{**}Date Royce & Associates, LLC assumed investment management responsibility for the Fund.

Letter to Our Stockholders

Rolling Stone Blues

At first blush, the mid-point of 2007 looked very similar to the end of 2006. The economy s condition was mostly positive, interest rates remained low and global liquidity levels remained flush following some vexing signs of contraction earlier in the year. The stock market kept moving mostly upwards, and the long bull market for small-caps in particular showed few signs of slowing down prior to July of this year. What s new for 2007 is that larger companies have emerged in the short run as market leaders, though the margin of outperformance versus small-cap both year-to-date and for the one-year period ended June 30 was not enormous. Within small-cap, there has been a move toward larger, arguably higher-quality companies that s distinct from the generally better returns achieved by more speculative issues in 2006. The overall direction remained positive for smaller companies, as it did for stocks as a whole. Equity investors continued to benefit from a remarkable run that included more of the overall market than is usually thought, small-cap having long since stolen the headlines from its larger peers as The Only Asset Class Worth Owning in some quarters.

Like the Rolling Stones, the bull market just kept going and going and going, almost automatic in its overall upward movement, its success seemingly taken for granted, with so many investors sure that the big hits would not fade away. As value investors, prone to a cautious, if not pessimistic, temperament, this blissful confidence on the part of certain observers was the object of our skepticism. Our view for the past few years has been that the bull market is nearly out of time. Although the market has so far seen fit to prove us wrong (though July s correction could be a sign of things to come), we remain convinced

One of the advantages of employing an all-weather strategy to select smaller company stocks is that we continue to do what we have always done regardless of the market s behavior. When smaller company stock prices were on the rise, it was more challenging to find the compelling values that have always been our stock in trade, but the search goes on whether the overall small-cap market is moving up or down.

This page is not part of the 2007 Semiannual Report to Stockholders | 3

Over the past decade or so the growth in the number and variety of equity market indices has been explosive. Russell, Standard & Poor\s (□S&P□), Wilshire, and Barra have all become accepted names in the equity world with stables of various indices. Considering the burgeoning number and scope of equity market indices, it is critical that investors better understand the composition, attribution and construction methodology among similar equity market indices.

As the Standard & Poor\(\partials\)

index recently celebrated

anniversary, we thought

be helpful to delve into

the particulars

Letter to Our Stockholders

that a more historically typical correction of 15% or better is in the near future for smaller companies. The positive-performance phase that began in the fall of 2002 was interrupted by only two corrections in the 10%-14% range[] one in 2004-5 and another in 2006[] and a handful of others that were shy of double digits. To paraphrase the poet, the course of true market cycles never did run smooth. At least not as smooth as this current cycle. And to us, this was a warning. As we saw in July, when stock prices fell harder then they did during any other month this year, things can change very quickly. Along with our belief in regression to the mean, our conviction that markets are inherently cyclical is too firm to counter any temptation to abandon the lessons of history.

As active small-cap managers with large stakes throughout the small-cap universe, perhaps we should be more consistently happy with a market that before July had been gathering no moss and few, if any bears. Maybe we should try a little harder to relax and simply enjoy the good times. Make no mistake, we are mostly the robust returns that smaller stocks have been providing since the most recent small-cap market trough in October 2002. However, as the small-cap bull stampeded its way toward a fifth full year, we were also in the midst of our own 19th Nervous Breakdown (and at least as many bear market predictions) as we awaited what seemed to us an inevitable small-cap downturn. Even as the market was swaying to higher and higher levels, we could not escape the nagging and persistent reality that historically strong bull markets often give way to serious corrections, and the longer the good times last, the more likely it seems that the bear∏s bite will be

The Royce
Funds view them. Two of
the most
prominent are the Russell
2000 and
the S&P SmallCap 600,
both widely
accepted benchmarks for
small-cap
equities. Yet each is
different in
composition, attribution
and
construction
methodology.

The Russell 2000 index is the oldest dating back to 1979 and broadest of the two small-cap indices. It measures the performance of the 2,000 smallest companies in the Russell 3000 Index (which represents 99% of the U.S.

Continued on page 6 ...

deep. Of course, one of the advantages of employing an all-weather strategy to select smaller company stocks is that we continue to do what we have always done regardless of the market s behavior. When smaller company stock prices were on the rise, it was more challenging to find the compelling values that have always been our stock in trade, but the search goes on whether the overall small-cap market is moving up or down.

It∏s All Over Now

If our call for overall lower returns has not yet panned out, and our prediction of a small-cap correction has thus far proved at best premature, we can take a small measure of comfort for

4 | This page is not part of the 2007 Semiannual Report to Stockholders our forecasting acumen in the emergence of large-cap as a market leader, a development we thought first looked likely by the beginning of 2006. As usually happens, the case for large-cap leadership took on a certain inevitability only with the gift of hindsight. In 2005, the large-cap S&P 500 and the small-cap Russell 2000 finished the year with near-identical results the S&P 500 was up 4.9% while the Russell 2000 gained 4.6%. The large-cap index relinquished the performance crown in 2006 (+15.8% versus 18.4%), but small-cap regained its edge mostly through the courtesy of a torrid first quarter and a strong fourth quarter. In both 2006□s bearish second quarter and large-cap in part because we do not flat-to-down third quarter, the S&P 500 beat the Russell 2000, events we regarded as especially telling of a shift to large-cap leadership. That third-quarter outperformance (+5.7% versus +0.4%) was the key to giving the large-cap index an edge for the second half of 2006; it also contributed to large-cap outgaining small-cap for the one-year period ended 6/30/07, up 20.6% versus 16.4%.

We have been less focused on the leadership issue within small-cap than we are in the wider worlds of small- and limit ourselves in the broad small-cap universe by attaching labels to stocks such as ∏value∏ or ∏growth.∏

Two thousand seven has been different in terms of its first-half performance patterns, yet the end result through the end of June showed the S&P 500 ahead of its small-cap counterpart. During this year sirst quarter, a period that was positive for almost every segment of the stock market save certain small-cap growth companies and many micro-cap stocks, the S&P 500 gained a paltry 0.6% versus 2.0% for the Russell 2000. (The Nasdag Composite, meanwhile, managed a 0.3% gain.) The second quarter saw higher returns spread more consistently throughout the market. Large-cap led small-cap, with the S&P 500 up 6.3% versus 4.4% for its small-cap sibling, while the Nasdaq Composite led both indices with a gain of 7.5%. For the year-to-date period ended 6/30/07, the Nasdaq Composite actually led, its 7.8% gain ahead of the S&P 500∏s 7.0% return and the Russell $2000 \square s$ 6.5% showing.

These first-half results, as well as the large- and small-cap indices one-year returns, were consistent with our thought that when large-cap stocks did finally assume a leadership role, the margin of outperformance would be slight. We remain committed to the idea that large-cap∏s stay at the top should be brief, as frequent leadership rotation seems likely to roll on. Considering the recent status of large-cap∏s leadership, it should come as no surprise that the long-term performance edge remained with smaller companies. The Russell 2000 outpaced the S&P 500 for the three-, five-, 10- and 15-year periods ended 6/30/07. In addition, the small-cap index outgained its large-cap counterpart in two-thirds of the S&P 500□s positive quarters in each three-, five- and 10-year period ended 6/30/07.

Not Fade Away

During the first half, a similar shift in leadership arrived via a different route between value and growth within small-cap. The Russell 2000 Value index had maintained a near-

This page is not part of the 2007 Semiannual Report to Stockholders | 5

equity market) and accounts for approximately 8% of the total market capitalization of the larger Russell index. As of the end of June 2007, the median market cap of the Russell 2000 was \$695 million. The largest company by market cap in the index was \$3.3 billion and the smallest was \$125 million. Companies with market capitalizations in excess of \$2.5 billion represented 6% of the index, while micro-caps, which Royce defines as companies with market capitalizations less than million, comprised roughly 13% of the index. In terms of attribution. Financial Services represented the largest sector weight in the index at the end of June 2007, at 22.6%. Industrials (autos and transportation. materials and processing and producer durable) and Consumer **Discretionary** followed, with weightings of 21.5% and 19.2%, respectively.

Introduced in 1994, the S&P SmallCap 600 is more concentrated than the Russell 2000, consisting of 600 names that cover approximately 3% of the domestic equity market.

Letter to Our Stockholders

stranglehold on small-cap leadership until the first quarter of 2007, when it slipped under the thumb of its small-cap growth sibling. During both the first quarter (+1.5% versus +2.5%) and second guarter (+2.3%versus +6.7%), the Russell 2000 Value index lost ground to the Russell 2000 Growth index. Interestingly for us, value also underperformed growth from the interim small-cap peak on 2/22/07 through 6/30/07, down 0.8% compared to a gain of 2.9%. This consistent underperformance, even during the year s more volatile periods, not only put small-cap value in second place for the year-to-date period ended 6/30/07 (+3.8% versus +9.3%), it also cost small-cap value the performance edge for the most recent 12-month period. For the one-year period ended 6/30/07, the Russell 2000 Value index was up 16.1% versus 16.8% for the Russell 2000 Growth index.

Paralleling the performance patterns of small-cap versus large-cap, the Russell 2000 Value index maintained its lead over the Russell 2000 Growth index for longer-term periods. It bested small-cap growth for the three-, five-, 10-,15-, 20- and 25-year periods ended 6/30/07. A critical element in this performance edge came from small-cap value ⊓s better performance during the nearly five-year bull-market period following the small-cap market trough in October 2002, and from its superior results from the previous small-cap market peak on 3/9/00 through 6/30/07. What gives us some pause about the current period is the relative strength of small-cap growth in the more volatile period from that February 2007 interim peak. This is in stark contrast to 2006, a period in which small-cap value beat small-cap growth in up, down and more mixed quarters. However, we have been less focused on the leadership issue within small-cap than we are in the wider worlds of small- and large-cap in part because we do not limit ourselves in the broad small-cap universe by attaching labels to stocks such as [value] or [growth.]

Cool, Calm & Collected

The median market cap of the S&P SmallCap 600 was \$820 million as of the end of June 2007. The largest company by market cap in the index was \$5.0 billion and the smallest was \$70 million. Companies with more than \$2.5 billion in market cap comprised approximately 7%, while micro-caps represented 20% of the overall index. Industrials (materials and processing and producer durable) represented the largest sector weighting in the index at 19.1%, followed by **Information** Another reason for our bemusement is rooted in our own Funds∏ recent results. While the Russell 2000 Value index was dominating small-cap performance in 2006, our closed-end portfolios were underperforming the small-cap value index. Yet during the first half of 2007, these same portfolios each outperformed the Russel 2000 Value Index on a net asset value (NAV) basis. So it would seem that the distinctions between small-cap value and growth stocks being drawn by the wider world may no longer be as significant as they were also even a few years ago. All three portfolios were also ahead of their small-cap benchmark, the Russell 2000, for the year-to-date period ended 6/30/07 on an NAV basis, and each outpaced the small-cap index on both and NAV and market price basis for the 12 months ended 6/30/07. When we turn to the long view, the news becomes even better. Each of our closed-end Funds outperformed the Russell 2000 from the previous small-cap market peak on 3/9/00 through 6/30/07 and from the small-cap market

Continued on page 8...

6 | This page is not part of the 2007 Semiannual Report to Stockholders trough on 10/9/02 through 6/30/07. In addition, each closed-end Royce Fund outgained the Russell 2000 for the three-, five- and 10-year periods ended 6/30/07 on both an NAV and market price basis.

First-half strength came from holdings in several sectors, but the leader in each portfolio was the Industrial Products sector. It prevailed in part owing to the success of certain holdings. Synalloy Corporation was a top performer on a dollar basis in Royce Value Trust and Royce Micro-Cap Trust, while Florida Rock Industries and IPSCO dominated dollar-based gains in Royce Focus Trust. Holdings in Natural Resources and Technology were generally solid as well. Although micro-cap stocks finished the first half trailing their larger small-cap peers, any ill effects scarcely registered in the Funds∏ first-half returns. We were therefore generally pleased with the Funds[first-half returns, especially in a market climate that has made it more and more challenging to find the sort of attractive values that we like.

The popularity of ETFs and other index-based investments has played an important role in helping small-cap to be taken more seriously as an asset class. We also think that the related success of small-cap value approaches has been a factor in this growing esteem because a large number of investors saw that you could invest in small-cap stocks or indices with attractively low volatility scores.

You Can∏t Always Get What You Want

Indeed, the reality of small-cap∏s status as a permanent, professional asset class∏something that we are happy to report does not seem likely to change, even in the event of a correction more severe than what we think is probable \u2204cuts both ways for us. The popularity of ETFs and other index-based investments has played an important role in helping small-cap to be taken more seriously as an asset class. We also think that the related success of small-cap value approaches has been a factor in this growing esteem because a large number of investors saw that you could invest in small-cap stocks or indices with attractively low volatility scores. However, this has also created new tests for our purchase habits, in which we seek high-quality companies selling for bargain prices.

This page is not part of the 2007 Semiannual Report to Stockholders | 7

Technology at 17.1%, and Financial Services at 15.8% at the end of June 2007.

Another important difference between the two indices is the respective construction methodology. The S&P SmallCap 600 is designed to be an pefficient portfolio of companies that meet specific inclusion criteria to ensure that they are investable and financially viable. Inclusion in the index is determined subjectively by the S&P Index Committee, which adds new stocks to the index based not only on size, but also on financial viability, liquidity, adequate float size and other trading requirements.

In contrast, the Russell 2000 is more objective in nature; it has no committee to determine membership and stresses the need to accurately represent the market as it is. Kelly Haughton, strategic director for the Russell Indices, believes that __the market should decide which stocks belong in an index, especially if the index is to provide an unbiased benchmark for measuring the results of money managers___ investment decisions._

With differing composition, attribution and construction, performance can also vary dramatically. In fact, examining the annual performance of the two indices over the past 10 years shows that the spread has been as wide as 1400 basis points in a single calendar year. Still, we think that the Russell 2000 and the Standard & Poor smallCap 600 Index are reasonable proxies of the small capitalization world.

Letter to Our Stockholders

Unquestionably, in our view, the major player in the extension of the small-cap bull market has been the vast amount of global liquidity. The world has been awash with capital looking for a profitable home, and that∏s been an enormous factor in keeping stock prices afloat. Many of the investment vehicles that have become increasingly better known not just ETFs, but hedge funds, as well as merger and acquisition (M&A) and private equity activity have been fueled to some degree by the large amounts of cash circling the globe. Global liquidity has worked to make M&As, leveraged buyouts and privatizations increasingly commonplace in the financial marketplace. The United States is in the midst of a mega-merger wave, with the number and size of the transactions exploding. During the first half of 2007, 15 companies in the S&P 500 announced takeovers, while 111 companies in the Russell 2000

^{8 |} This page is not part of the 2007 Semiannual Report to Stockholders

had deals pending. Equally important, the trend has shown no signs of slowing down within the small-cap world.

However mindful of the significance of these figures, we still do not believe that the extraordinary amount of global liquidity changes the rules of the road in the U.S. equity market, at least **over the long run.** Cyclicality remains the norm. Today□s small-cap market is no different than large-cap was during the ☐90s. Global liquidity has extended

a wonderful bull market, but it cannot save the market from history, which means that sooner or later, the good times will end. Smaller companies have been, and will continue to be, the target of private equity funds and larger companies flush with cash. Although it∏s forecasts for the market to cloud our clear that M&A activity is not the primary driver of long-term performance, it has already had a hand in the extended run for a small-cap bull market. Yet once the bull market for acquisitions ends, the softening in demand could precipitate a more widespread correction in the very market whose bullish phase it helped to extend in the first place.

We have never allowed our thoughts on the short- or intermediate-term stock selection process. Regardless of where we think the market may be headed next, the search for great values in smaller stocks goes on...

Time Is On Our Side

As we look forward, we almost find ourselves wishing for a serious, though short-lived, correction for smaller stocks. We are still buying mostly on short-term dips, which typically do not yield the sort of absolute value that we would ideally prefer. Our goal is to be fully invested, but with purchase decisions becoming harder and harder, it has not been easy. Yet that is the reality of the current market (at least as of this writing), so we make our adjustments and deal with what we have on a daily basis. And even as we remain highly concerned about a correction for smaller companies, we are also confident about the long-term prospects for our chosen asset class. Whether or not a decidedly bearish July marked the beginning of a correction, we are still managing our portfolios with a long-term outlook and an absolute return bias. We have never allowed our thoughts on the short- or intermediate-term forecasts for the market to cloud our stock selection process. Regardless of where we think the market may be headed next, the search for great values in smaller stocks goes on, with the thought that our Funds can provide the kind of terrific long-term absolute returns that help our shareholders to build wealth.

Sincerely,

Charles M. Rovce President July 31, 2007 W. Whitney George Vice President

Jack E. Fockler, Jr. Vice President

Royce Value Trust

Royce Value Trust (RVT) diversified portfolio of small- and micro-cap stocks posted solid results during the first half of 2007. For the year-to-date period ended 6/30/07, the Fund was up 9.8% on a net asset value (NAV) basis and 0.6% on a market price basis versus a 6.5% return for the Russell 2000 and 8.6% for the S&P 600. For the first quarter, the Fund returned 3.3% on an NAV basis, and 1.5% on a market price basis compared with 2.0% and 3.2% for the Russell 2000 and S&P 600, respectively. The Fund NAV results were also strong in the second quarter, with RVT posting a 6.3% gain compared with 4.4% and 5.3% for the Russell 2000 and S&P 600, while on a market price basis, the Fund disappointed, losing 0.8%.

RVT demonstrated strong absolute and relative results over market-cycle and other long-term periods. From the small-cap market peak on 3/9/00 through 6/30/07, RVT gained 154.2% on an NAV basis, versus 50.8% for the Russell 2000 and 106.4% for the S&P 600. During the mostly bullish phase from the small-cap market trough on 10/9/02 through 6/30/07, the Fund was up 189.4% compared to a gain of 169.9% for the Russell 2000 and 164.7% for the S&P 600. Fortunately, market-price performance difficulties during the first half did little to hurt performance over more extended periods. On both an NAV and market price basis, RVT held a performance advantage over both benchmarks for the one-, three-, five-, 10-, 15-, 20-year, and since inception (11/26/86) periods ended 6/30/07. RVT[s average annual NAV total return since inception was 13.2%.

Positive performances could be found throughout RVT portfolio, with the Industrial Products sector leading the way in dollar-based net gains. The worldwide boom in large-scale in frastructure construction.

Positive performances could be found throughout RVT[s portfolio, with the Industrial Processing of the Processing of the

the Industrial Products sector in the top-performing construction materials industry. This conservatively capitalized pipe and piping systems maker saw its share price climb (before cooling off a bit toward the end of June) owing to ongoing earnings strength. We began to reduce our position in May.

Important Performance and Risk Information

All performance information reflects past performance, is presented on a total return basis and reflects the reinvestment of distributions. Past performance is no guarantee of future results. Current performance may be higher or lower than performance quoted. Returns as of the recent month-end may be obtained at www.roycefunds.com. The market price of the Fund[s shares will fluctuate, so that shares may be worth more or less than their original cost when sold. The Fund invests primarily in securities of small-cap and micro-cap companies, which may involve considerably more risk than investing in a more diversified portfolio of larger-cap companies. Standard deviation is a statistical measure within which a fund s total returns have varied over time. The greater the standard deviation, the greater a fund s volatility. The Russell 2000 is an unmanaged index of domestic small-cap common stocks.

12 | The Royce Funds 2007 Semiannual Report to Stockholders

Performance and Portfolio Review

Other strong gainers in the sector included Lincoln Electric Holdings, Peerless Manufacturing Company, Kaydon Corporation and Florida Rock Industries, a takeover target that we have owned in the portfolio since 1986.

There were also notable successes outside of Industrial Products. We have held a position in Sotheby∏s, the Fund∏s top performing holding in the first half, since 1990. First and second guarter earnings strength helped the share price for this leading auction house to climb, and we trimmed our position in February and April. Impressive net gains also came from PAREXEL International, a company we have owned since 1998. This bio-pharmaceutical services company provides contract research, medical marketing, consulting, informatics, and advanced technology products and services to the pharmaceutical, biotechnology, and medical device industries worldwide. Its growing business and strong earnings helped its stock price stay healthy in the first half. Having recently celebrated its 25th anniversary in business, its standing as a long-term success in a volatile industry may also have helped.

Royce Micro-Cap Trust

Royce Micro-Cap Trust[s diversified portfolio of diminutive companies fared well in the first half on both an absolute and relative basis. For the year-to-date period ended 6/30/07, the Fund gained 9.2% on a net asset value (NAV) basis, though on a market price basis it lost 2.9%, versus a return of 6.5% for its small-cap benchmark, the Russell 2000. The Fund[s strong absolute and relative NAV showing was consistent during the first half of 2007. RMT gained 4.6% in the first quarter versus 2.0% for the Russell 2000, while the Fund was down 0.7% on a market price basis. On an NAV basis, the Fund matched the gain of its benchmark in the second quarter, each up 4.4%, though its market price result was again disappointing, down 2.2%.

represented a cooling off after a terrific performance in 2006. Its poor first half fortunately did little harm to its long-term returns. From the previous small-cap market peak on 3/9/00 through 6/30/07, RMT was up 170.0% on a net asset value basis, and 223.0% on a market price basis, compared to the Russell 2000∏s 50.8% gain. During the more dynamic upswing from the small-cap market trough on 10/9/02 through 6/30/07, RMT gained 212.6% on an NAV basis and 243.3% on a market price basis, versus 169.9% for the small-cap benchmark. The impressive on an absolute basis, something of greater importance to us, as much as we like to beat our benchmark. On both an NAV and market price basis, RMT outperformed the Russell 2000 for the one-, three-, five-, 10-year and since inception (12/14/93) periods ended 6/30/07. **The Fund** \square **s** average annual NAV total return since inception was 14.8%.

One interesting development that we saw over the last several months has been a performance disparity within the micro-cap sector. Roughly coinciding with the move to higher quality that we have observed in the upper tier of the small-cap world has been better performance from larger, more established micro-cap companies. This benefited the Fund in the first half of 2007, as $RMT \square s$ average market

14 | The Royce Funds 2007 Semiannual Report to Stockholders

Performance and Portfolio Review

The Industrial Products sector led the way during the first half in terms of dollar-based net gains. The ongoing worldwide boom in large-scale infrastructure construction, particularly in China, has made industrial companies, historically well-represented in the portfolio, highly desirable. The Fund[s top performer came from the sector. Synalloy is a conservatively capitalized pipe and piping services business that saw its share price increase driven by ongoing earnings strength before it cooled off a bit toward the end of June. We reduced our position in February and June. Holdings in machinery and other industrial products also posted strong first-half gains.

We have owned shares of privatized correctional and detention management company Geo Group, since January 2000. Its business grew during the first half allowing the company to reduce its debt and its stock split early in June, which helped its share price to break out while leading us to reduce our position later that same month. We have owned bio-pharmaceutical services company PAREXEL International in RMT sportfolio since 1999. Growing business and strong earnings helped its stock price to climb. Its standing as a long-term success in an otherwise volatile industry may also have helped. We reduced our position in June.

Even during positive performance periods, there are f e w disappointments. , Healthcare consultant First **Consulting Group** lost a customer that brought in 9 about 10% of the - firm∏s business. After others had sold on this news, we increased our position based on the strength of the firm∏s balance sheet, improving returns on capital and a series of promising acquisitions. Real

estate investment trusts suffered from the slumping housing market and the subprime mortgage industry crisis during the first half of 2007. Opteum, which we have owned since 2005, was no exception, and the firm [s problems were exacerbated by the departure of some veteran executives. Its share price

dropped dramatically, and while that did not deliver positive results in the short run, we saw enough promise in the company to justify adding to our position.

Royce Focus Trust

Royce Focus Trust (FUND) made its way successfully through the pleasantly buoyant waters of 2007 s first half, with notable results on both an absolute and relative basis. **The Fund posted dynamic**

year-to-date returns, up 15.9% on a net asset value (NAV) basis and 8.6% on a market price basis, in both instances ahead of FUND\(\partials\) small-cap benchmark, the Russell 2000, which was up 6.5% for the same period. Results were positive throughout the year s first six months. In the first quarter, the Fund was up 7.1% on a net asset value (NAV) basis, and 7.4% on a market price basis, both results well out in front of the small-cap index, which was up 2.0%. During the second guarter, the Fund again outpaced the benchmark on an NAV basis, up 8.2% versus 4.4%, while its return on a market price basis was 1.2%.

As gratifying as recent short-term outperformance was, it remains the case that the Fund□s market cycle and other long-term periods offer what we believe is the best gauge of its strength. We were very pleased, then, that FUND maintained its longstanding record of strong absolute performances over these time periods. From the previous small-cap market peak on 3/9/00 through 6/30/07, FUND was up 248.4% and 327.3% on NAV and market price bases, respectively, versus a 50.8% result for the small-cap index.

The Fund also beat the Russell 2000 during the mostly bullish phase from 10/9/02 through 6/30/07, gaining 266.3% on an NAV basis and F 298.4% on a l market price basis, while the Russell 2000 gained 169.9% for the same period. These strong market cycle results were a key outperformance t h e ofbenchmark over

factor in FUND□s *Includes dividends calendar-based periods. On both an NAV and market price basis, the Fund∏s limited portfolio of primarily small-cap stocks outpaced the index for the one-, three-, five-, 10-year n since-inception o f o u r

GOOD IDEAS THAT WORKED Net Realized and Unrealized Investment Return* Year-to-Date Through 6/30/07

IPSCO	\$3,396,454
Florida Rock Industries	2,290,728
Tesco Corporation	1,996,506
lvanhoe Mines	1,984,500
Reliance Steel & Aluminum	1,704,000

management periods ended 6/30/07. FUND[s a v e r a g e annual NAV total return since the inception of o u r management (11/1/96) was 15.2%.

Although there were plenty of positive performances in the portfolio during the first half, the strongest dollar-based net gains came from the Industrial Products and Natural Resources sectors. The Fund stop two performers, IPSCO and Florida Rock Industries, were Industrial Products holdings. We first began to buy shares of construction aggregates company Florida Rock Industries in other Royce-managed portfolios more than 20 years ago and have had a position in FUND sportfolio since 1998. In February 2007, the

Important Performance and Risk Information

All performance information reflects past performance, is presented on a total return basis and reflects the reinvestment of distributions. Past performance is no quarantee of future results. Current performance may be higher or lower than performance quoted. Returns as of the recent month-end may be obtained at www.roycefunds.com. The market price of the be worth more or less than their original cost when sold. The Fund normally invests primarily in small-cap companies, which may involve considerably more risk than investing in a more diversified portfolio of larger-cap companies. Standard deviation is a statistical measure within which a fund s total returns have varied over time. The greater the standard deviation, the greater a fund s volatility. The Russell 2000 is an unmanaged index of domestic small-cap common stocks.

Performance and Portfolio Review

company was acquired by a larger competitor at a substantial premium. We finished selling our stake in April. The firm was consistently attractive to us as a conservatively capitalized, well-run business in a cyclical industry that has historically garnered attention from value investors. Canadian steel production and fabrication company IPSCO first attracted our attention in 2004 with its pristine balance sheet, strong history of earnings and high returns on capital. It was also the target of the urge to merge. Earlier this year, several larger firms began looking at the firm as a potential acquisition, with Swedish business SSAB finally closing the deal in May. We sold our shares between April and May. Within Natural Resources, Tesco Corporation, which designs and manufactures oilfield products such as drilling and hydraulic systems, reported record first-quarter earnings. This helped its already rising stock price to keep climbing. We reduced our position at increasing prices between January and May. Ivanhoe Mines is a conservatively capitalized business with extensive operations in Mongolia. It recently won permission from that nation \sigma government to develop what could be the world[s largest undeveloped copper and gold deposits in tandem with another firm, news that gave a healthy sheen to Ivanhoe∏s stock price. Unit Corporation reaped the rewards of running a strong, well-managed business in a mostly positive market for

energy stocks. We added to our stake i	in January and June.

Even the best performing periods have their blemishes. n t h otherwise-profitable precious metals and mining industry within the Natural Resources sector. -Gammon Gold disappointed. In a difficult market for gold and silver commodity prices, the firm went through a change in management (that we liked) and had some issues with its Mexican mining operations. We substantially increased our stake in institutional trading and asset management

company Knight Capital Group. Its stock price began to slip in January as the firm experienced slumping profits from increase of compensation costs. In the second quarter, earnings were hampered by a decline in its hedge fund fees.

^{*} Beginning with the 1997 (RVT), 2002 (RMT) and 2004 (FUND) distributions, the purchase price of distributions is a weighted average of the distribution reinvestment prices for the year.

^{**} Other than for initial purchase and June 30, 2007, values are stated as of December 31 of the year indicated, after reinvestment of distributions.

^{18 |} The Royce Funds 2007 Semiannual Report to Stockholders

Distribution Reinvestment and Cash Purchase Options

Why should I reinvest my distributions?

By reinvesting distributions, a stockholder can maintain an undiluted investment in the Fund. The regular reinvestment of distributions has a significant impact on stockholder returns. In contrast, the stockholder who takes distributions in cash is penalized when shares are issued below net asset value to other stockholders.

How does the reinvestment of distributions from the Royce closed-end funds work?

The Funds automatically issue shares in payment of distributions unless you indicate otherwise. The shares are generally issued at the lower of the market price or net asset value on the valuation date.

How does this apply to registered stockholders?

If your shares are registered directly with a Fund, your distributions are automatically reinvested unless you have otherwise instructed the Funds transfer agent, Computershare, in writing. A registered stockholder also has the option to receive the distribution in the form of a stock certificate or in cash if Computershare is properly notified.

What if my shares are held by a brokerage firm or a bank?

If your shares are held by a brokerage firm, bank, or other intermediary as the stockholder of record, you should contact your brokerage firm or bank to be certain that it is automatically reinvesting distributions on your behalf. If they are unable to reinvest distributions on your behalf, you should have your shares registered in your name in order to participate.

What other features are available for registered stockholders?

The Distribution Reinvestment and Cash Purchase Plans also allow registered stockholders to make optional cash purchases of shares of a Fund\[\] s common stock directly through Computershare on a monthly basis, and to deposit certificates representing your Fund shares with Computershare for safekeeping. The Funds\[\] investment adviser is absorbing all commissions on optional cash purchases under the Plans through December 31, 2007.

How do the Plans work for registered stockholders?

Computershare maintains the accounts for registered stockholders in the Plans and sends written confirmation of all transactions in the account. Shares in the account of each participant will be held by Computershare in non-certificated form in the name of the participant, and each participant will be able to vote those shares at a stockholder meeting or by proxy. A participant may also send other stock certificates held by them to Computershare to be held in non-certificated form. There is no service fee charged to participants for reinvesting distributions. If a participant elects to sell shares from a Plan account, Computershare will deduct a \$2.50 fee plus brokerage commissions from the sale transaction. If a nominee is the registered owner of your shares, the nominee will maintain the accounts on your behalf.

How can I get more information on the Plans?

You can call an Investor Services Representative at (800) 221-4268 or you can request a copy of the Plan for your Fund from Computershare. All correspondence (including notifications) should be directed to: [Name of Fund] Distribution Reinvestment and Cash Purchase Plan, c/o Computershare, PO Box 43010, Providence, RI 02940-3010, telephone (800) 426-5523.

INCOME TAX INFORMATION: The cost of total investments for Federal income tax purposes was \$1,119,700,514. At June 30, 2007, net unrealized appreciation for all securities was \$486,265,378, consisting of aggregate gross unrealized appreciation of \$527,222,556 and aggregate gross unrealized depreciation of \$40,957,178. The primary difference in book and tax basis cost is the timing of the recognition of losses on securities sold.

- (a) The Market Value Total Return is calculated assuming a purchase of Common Stock on the opening of the first business day and a sale on the closing of the last business day of each period reported. Dividends and distributions, if any, are assumed for the purposes of this calculation to be reinvested at prices obtained under the Fund Distribution Reinvestment and Cash Purchase Plan. Net Asset Value Total Return is calculated on the same basis, except that the Fund snet asset value is used on the purchase and sale dates instead of market value.
- (b) Expense ratios based on total average net assets including liquidation value of Preferred Stock were 1.06% 1.08%, 1.22%, 1.21%, 1.19% and 1.38% for the periods ended June 30, 2007 and December 31, 2006, 2005, 2004, 2003 and 2002, respectively.
- (c) Expense ratios based on average net assets applicable to Common Stockholders before waiver of fees by the investment adviser would have been 1.62% and 1.82% for the periods ended December 31, 2003 and 2002, respectively.
- (d) The management fee is calculated based on average net assets over a rolling 60-month basis, while the above ratios of management fee expenses are based on the average net assets applicable to Common Stockholders over a 12-month basis.
- (e) The average of month-end market values during the period that the Preferred Stock was outstanding.

 * To be allocated to net investment income and capital gains at year end.
- ** Annualized.
- *** Not annualized.

30 | 2007 Semiannual Report to Stockholders

THE ACCOMPANYING NOTES ARE AN INTEGRAL PART OF THESE FINANCIAL STATEMENTS.

Notes to Financial Statements (unaudited)

Summary of Significant Accounting Policies:

Royce Value Trust, Inc. ([the Fund[) was incorporated under the laws of the State of Maryland on July 1, 1986 as a diversified closed-end investment company. The Fund commenced operations on November 26, 1986. The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of income and expenses during the reporting period. Actual results could differ from those estimates.

Valuation of Investments:

Securities are valued as of the close of trading on the New York Stock Exchange (NYSE) (generally 4:00 p.m. Eastern time) on the valuation date. Securities that trade on an exchange, and securities traded on Nasdaq∏s Electronic Bulletin Board, are valued at their last reported sales price or Nasdaq official closing price taken from the primary market in which each security trades or, if no sale is reported for such day, at their bid price. Other over-the-counter securities for which market quotations are readily available are valued at their highest bid price. Securities for which market quotations are not readily available are valued at their fair value under procedures established by the Fund∏s Board of Directors. In addition, if between the time trading ends on a particular security and the close of the customary trading session on the NYSE, events occur that are significant and may make the closing price unreliable, the Fund may fair value the security. The Fund uses an independent pricing service to provide fair value estimates for relevant non-U.S. equity securities on days when the U.S. market volatility exceeds a certain threshold. This pricing service uses proprietary correlations it has developed between the movement of prices of non-U.S. equity securities and indices of U.S.-traded securities, futures contracts and other indications to estimate the fair value of relevant non-U.S. securities. Bonds and other fixed income securities may be valued by reference to other securities with comparable ratings, interest rates and maturities, using established independent pricing services. Investments in money market funds are valued at net asset value per share.

Foreign Currency:

The Fund values its non-U.S. securities in U.S. dollars on the basis of foreign currency exchange rates provided to the Fund by its custodian, State Street Bank and Trust Company. The effects of changes in foreign exchange

rates on investments and other assets and liabilities are included with net realized and unrealized gains and losses on investments.

Net realized foreign exchange gains or losses arise from sales and maturities of short-term securities, sales of foreign currencies, expiration of currency forward contracts, currency gains or losses realized between the trade and settlement dates on securities transactions, the difference between the amounts of dividends, interest, and foreign withholding taxes recorded on the Fund sooks, and the U.S. dollar equivalent of the amounts actually received or paid. Net unrealized foreign exchange gains and losses arise from changes in the value of assets and liabilities,

including investments in securities at the end of the reporting period, as a result of changes in foreign currency exchange rates.

Investment Transactions and Related Investment Income:

Investment transactions are accounted for on the trade date. Dividend income is recorded on the ex-dividend date. Non-cash dividend income is recorded at the fair market value of the securities received. Interest income is recorded on an accrual basis. Premium and discounts on debt securities are amortized using the effective yield to maturity method. Realized gains and losses from investment transactions are determined on the basis of identified cost for book and tax purposes.

Expenses:

The Fund incurs direct and indirect expenses. Expenses directly attributable to the Fund are charged to the Fund soperations, while expenses applicable to more than one of the Royce Funds are allocated in an equitable manner. Allocated personnel and occupancy costs related to The Royce Funds are included in administrative and office facilities expenses. The Fund has adopted a deferred fee agreement that allows the Fund Directors to defer the receipt of all or a portion of Directors Fees otherwise payable. The deferred fees are invested in certain Royce Funds until distributed in accordance with the agreement.

Compensating Balance Credits:

The Fund has an arrangement with its custodian bank, whereby a portion of the custodian s fee is paid indirectly by credits earned on the Fund s cash on deposit with the bank. This deposit arrangement is an alternative to purchasing overnight investments.

Taxes:

As a qualified regulated investment company under Subchapter M of the Internal Revenue Code, the Fund is not subject to income taxes to the extent that it distributes substantially all of its taxable income for its fiscal year. The Schedule of Investments includes information regarding income taxes under the caption \(\pi\)Income Tax Information\(\pi\).

Distributions:

The Fund currently has a policy of paying quarterly distributions on the Fund ∏s Common Stock.

Distributions are currently being made at the annual rate of 9% of the rolling average of the prior four calendar quarter-end NAVs of the Fund□s Common Stock, with the fourth quarter distribution being the greater of 2.25% of the rolling average or the distribution required by IRS regulations. Distributions to Preferred Stockholders are accrued daily and paid quarterly and distributions to Common Stockholders are recorded on ex-dividend date. The Fund is required to allocate long-term capital gain distributions and other types of income proportionately to distributions made to holders of shares of Common Stock and Preferred Stock. To the extent that distributions are not paid from long-term capital gains, net investment income or net short-term capital gains, they will represent a return of capital. Distributions are determined in accordance with income tax regulations that may differ from accounting principles generally accepted in the United States of America. Permanent book and tax basis differences relating to stockholder distributions will result in reclassifications within the capital accounts. Undistributed net investment income may include

2007 Semiannual Report to Stockholders | 31

Notes to Financial Statements (unaudited) (continued)

temporary book and tax basis differences, which will reverse in a subsequent period. Any taxable income or gain remaining undistributed at fiscal year end is distributed in the following year.

Repurchase Agreements:

The Fund may enter into repurchase agreements with institutions that the Fund investment adviser has determined are creditworthy. The Fund restricts repurchase agreements to maturities of no more than seven days. Securities pledged as collateral for repurchase agreements, which are held until maturity of the repurchase agreements, are marked-to-market daily and maintained at a value at least equal to the principal amount of the repurchase agreement (including accrued interest). Repurchase agreements could involve certain risks in the event of default or insolvency of the counter-party, including possible delays or restrictions upon the ability of the Fund to dispose of the underlying securities.

Securities Lending:

The Fund loans securities to qualified institutional investors for the purpose of realizing additional income. Collateral on all securities loaned for the Fund is accepted in cash and cash equivalents and invested temporarily by the custodian. The collateral is equal to at least 100% of the current market value of the loaned securities. The market value of the loaned securities is determined at the close of business of the Fund and any additional required collateral is delivered to the Fund on the next business day.

Recent Accounting Pronouncements:

Financial Accounting Standards Board ([FASB]) Interpretation No. 48, [Accounting for Uncertainty in Income Taxes[] ([]FIN 48[]) provides guidance for how uncertain tax positions should be recognized, measured, presented and disclosed in the financial statements. FIN 48 requires the evaluation of tax positions taken or expected to be taken in the course of preparing the Fund∏s tax returns to determine whether the tax positions are [more-likely-than-not] of being sustained by the applicable tax authority. Tax positions not deemed to meet the more-likely-than-not threshold would be recorded as a tax benefit or expense in the current vear. FIN 48 was adopted for the Fund on June 29, 2007. There was no material impact to the financial statements or disclosures thereto as a result of the adoption of this pronouncement.

FASB Statement of Financial Accounting Standard No. 157, [Fair Value Measurement] ([FAS 157]), provides enhanced guidance for using fair value to measure assets and liabilities. The standard requires companies

to provide expanded information about the assets and liabilities measured at fair value and the potential effect of these fair valuations on an entity s financial performance. The standard does not expand the use of fair value in any new circumstances, but provides clarification on acceptable fair valuation methods and applications. Adoption of FAS 157 is required for fiscal years beginning after November 15, 2007. The standard is not expected to materially impact the Funds financial statements.

Capital Stock:

The Fund issued 1,238,869 and 2,548,023 shares of Common Stock as reinvestment of distributions by Common Stockholders for the six months ended June 30, 2007 and the year ended December 31, 2006, respectively.

At June 30, 2007, 8,800,000 shares of 5.90% Cumulative

Preferred Stock were outstanding. Commencing October 9, 2008 and thereafter, the Fund, at its option, may redeem the Cumulative Preferred Stock, in whole or in part, at the redemption price. The Cumulative Preferred Stock is classified outside of permanent equity (net assets applicable to Common Stockholders) in the accompanying financial statements in accordance with Emerging Issues Task Force (EITF) Topic D-98, Classification and Measurement of Redeemable Securities, that requires preferred securities that are redeemable for cash or other assets to be classified outside of permanent equity to the extent that the redemption is at a fixed or determinable price and at the option of the holder or upon the occurrence of an event that is not solely within the control of the issuer. The Fund is required to meet certain asset coverage tests with respect to the Cumulative Preferred Stock as required by the 1940 Act. In addition, pursuant to the Rating Agency Guidelines established by Moody∏s, the Fund is required to maintain a certain discounted asset coverage. If the Fund fails to meet these requirements and does not correct such failure, the Fund may be required to redeem, in part or in full, the Cumulative Preferred Stock at a redemption price of \$25.00 per share, plus an amount equal to the accumulated and unpaid dividends, whether or not declared on such shares, in order to meet these requirements. Additionally, failure to meet the foregoing asset coverage requirements could restrict the Fund□s ability to pay dividends to Common Stockholders and could lead to sales of portfolio securities at inopportune times.

Investment Advisory Agreement:

Cumulative Preferred Stock.

As compensation for its services under the Investment Advisory Agreement, Royce & Associates, LLC ([Royce]) receives a fee comprised of a Basic Fee ([Basic Fee]) and an adjustment to the Basic Fee based on the investment performance of the Fund in relation to the investment record of the S&P SmallCap 600 Index ([S&P 600]). The Basic Fee is a monthly fee equal to 1/12 of 1% (1% on an annualized basis) of the average of the Fund[smonth-end net assets applicable to Common

The Fund has met these requirements since issuing the

Stockholders, plus the liquidation value of Preferred Stock, for the rolling 60-month period ending with such month (the performance period). The Basic Fee for each month is increased or decreased at the rate of 1/12 of .05% for each percentage point that the investment performance of the Fund exceeds, or is exceeded by, the percentage change in the investment record of the S&P 600 for the performance period by more than two percentage points. The performance period for each such month is a rolling 60-month period ending with such month. The maximum increase or decrease in the Basic Fee for any month may not exceed 1/12 of .5%. Accordingly, for each

32 | 2007 Semiannual Report to Stockholders

Notes to Financial Statements (unaudited) (continued)

month, the maximum monthly fee rate as adjusted for performance is 1/12 of 1.5% and is payable if the investment performance of the Fund exceeds the percentage change in the investment record of the S&P 600 by 12 or more percentage points for the performance period, and the minimum monthly fee rate as adjusted for performance is 1/12 of .5% and is payable if the percentage change in the investment record of the S&P 600 exceeds the investment performance of the Fund by 12 or more percentage points for the performance period.

Notwithstanding the foregoing, Royce is not entitled to receive any fee for any month when the investment performance of the Fund for the rolling 36-month period ending with such month is negative. In the event that the Fund sinvestment performance for such a performance period is less than zero, Royce will not be required to refund to the Fund any fee earned in respect of any prior performance period.

Royce has voluntarily committed to waive the portion of its investment advisory fee attributable to an issue of the Fund\[\]s Preferred Stock for any month in which the Fund\[\]s average annual NAV total return since issuance of the Preferred Stock fails to exceed the applicable Preferred Stock\[\]s dividend rate.

For the six rolling 60-month periods ended June 2007, the investment performance of the Fund exceeded the investment performance of the S&P 600 by 4% to 12%. Accordingly, the investment advisory fee consisted of a Basic Fee of \$5,523,766 and an upward adjustment of \$1,571,659 for performance of the Fund above that of the S&P 600. For the six months ended June 30, 2007, the Fund accrued and paid Royce advisory fees totaling \$7,095,425.

Purchases and Sales of Investment Securities:

For the six months ended June 30, 2007, the cost of purchases and proceeds from sales of investment securities, other than short-term securities and collateral received for securities loaned, amounted to \$68,057,069 and \$194,640,593, respectively.

Transactions in Shares of Affiliated Companies:

An \square Affiliated Company, \square as defined in the Investment Company Act of 1940, is a company in which a Fund owns 5% or more of the company \square s outstanding voting securities at any time during the period. The Fund effected the following transactions in shares of such companies during the six months ended June 30, 2007:

Affiliated	Shares	Market Value	Cost of	Cost of	Realized	Dividend	Shares	Market Value
Company	12/31/06	12/31/06	Purchases	Sales	Gain (Loss)	Income	6/30/07	6/30/07
