PROSPECTUS

Shares

Common Stock

We are offering \_\_\_\_\_ shares of our common stock. We intend to list our common stock on The NASDAQ Global Market. We anticipate that the initial public offering price per share of common stock will be between \$ \_\_\_\_\_ and \$ \_\_\_\_\_. Our common stock is currently traded on the Over-the-Counter Bulletin Board under the symbol CXPO.OB.

*Investing in our common stock involves risks. See Risk Factors beginning on page 15.*

	<b>Per Share</b>	<b>Total</b>
Price to the public	\$ _____	\$ _____
Underwriting discounts and commissions	\$ _____	\$ _____
Proceeds to us (before expenses)	\$ _____	\$ _____

We have granted the underwriters a 30-day option to purchase up to an additional \_\_\_\_\_ shares from us on the same terms and conditions as set forth above if the underwriters sell more than \_\_\_\_\_ shares of common stock in this offering.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or passed upon the adequacy or accuracy of this prospectus. Any representation to the contrary is a criminal offense.

Barclays Capital, on behalf of the underwriters, expects to deliver the shares on or about \_\_\_\_\_, 2009.

## ABOUT THIS PROSPECTUS

**You should rely only on the information contained in this document or to which we have referred you. We have not authorized anyone to provide you with information that is different. This document may only be used where it is legal to sell these securities. The information in this document may only be accurate on the date of this document.**

Except as otherwise indicated herein or as the context otherwise requires, references in this prospectus to Crimson Exploration, Crimson, the Company, our company, we, our, and us refer collectively to Crimson Exploration predecessor GulfWest Energy Inc. and our subsidiaries.

Our natural gas and crude oil reserve information as of December 31, 2008 included in this prospectus is based on a reserve report prepared by Netherland, Sewell & Associates, Inc., our independent reserve engineering firm. A summary of that report is attached as Appendix B.

Unless otherwise indicated, the information contained in this prospectus assumes that the underwriters do not exercise their option to purchase additional shares from us.

**Table of Contents**

**PROSPECTUS SUMMARY**

*This summary highlights information appearing elsewhere in this prospectus. Because this is a summary, it may not contain all of the information that you should consider before investing in our common stock. You should carefully read the entire prospectus, including the financial data and related notes and the information presented under the caption Risk Factors, before making an investment decision. Certain terms used in this prospectus are defined in the Glossary of Selected Terms beginning on page A-1.*

**Our Company**

Crimson is an independent energy company engaged in the acquisition, exploitation, exploration and development of natural gas and crude oil properties. We have historically focused our operations in the onshore U.S. Gulf Coast and South Texas regions, which are generally characterized by high rates of return in known, prolific producing trends. We have recently expanded our strategic focus to include longer reserve life resource plays that we believe provide significant long-term growth potential in multiple formations.

In late 2008 and early 2009, we acquired approximately 12,000 net acres in East Texas where we completed our first well, the Kardell #1H, in October 2009. This well targeted the Haynesville Shale and initially produced 30.7 MMcfe/d, which we believe to be the highest publicly announced initial production rate to date in that formation. In addition to the Haynesville Shale, we believe this acreage is equally prospective in the Bossier Shale and James Lime formations where industry participants have drilled successful wells on adjacent acreage.

In 2007, we acquired approximately 2,800 net acres in South Texas, which we believe is prospective in the Austin Chalk and the Eagle Ford Shale. We drilled our first well on this acreage, the Dubose #1, during the fourth quarter of 2009, and we are preparing to complete the well in the Eagle Ford Shale.

We intend to grow reserves and production by developing our existing producing property base, developing our East Texas and South Texas resource potential, and pursuing opportunistic acquisitions in areas where we have specific operating expertise. We have developed a significant project inventory of over 800 drilling locations associated with our existing property base. Our technical team has a successful track record of adding reserves through the drillbit. Since January 2008, we have drilled 34 gross (15.2 net) wells with an overall success rate of 91% (excluding one well which has not yet been completed).

As of December 31, 2008, our estimated proved reserves, as prepared by our independent reserve engineering firm, Netherland, Sewell & Associates, Inc., were 131.9 Bcfe, consisting of 96.2 Bcf of natural gas and 6.0 MMBbl of crude oil, condensate and natural gas liquids. As of December 31, 2008, 73% of our proved reserves were natural gas, 69% were proved developed and 81% were attributed to wells and properties operated by us. From 2006 to 2008, we grew our estimated proved reserves from 46.4 Bcfe to 131.9 Bcfe. In addition, we grew our average daily production from 7.3 MMcfe/d for the year ended December 31, 2006 to 43.0 MMcfe/d for the nine months ended September 30, 2009. For the nine months ended September 30, 2009, we generated \$55.2 million of Adjusted EBITDAX. Our definition of the non-GAAP financial measure of Adjusted EBITDAX and a reconciliation of net income (loss) to Adjusted EBITDAX are provided under Non-GAAP Financial Measures and Reconciliations. For the same period, our net income (loss) was \$(16.8) million.

After application of net proceeds of \$ from this offering (estimated based upon the midpoint of the range of the offering price on the cover of this prospectus), we expect to have approximately \$ million of available borrowing capacity under our revolving credit facility to pursue our 2010 drilling program. Our 2010 capital budget is

approximately \$55 million, exclusive of acquisitions, of which we expect to spend approximately 76% of our budget on our East Texas and South Texas resource plays and 24% on our existing producing assets. We plan to drill 12 gross

## **Table of Contents**

(6.0 net) wells in 2010, including 7 gross (3.0 net) wells on our East Texas resource play acreage, one gross (0.4 net) well on our South Texas resource play acreage, and 4 gross (2.6 net) wells in Liberty County. The actual number of wells drilled and the amount of our 2010 capital expenditures will depend on market conditions, commodity prices, availability of capital and drilling and production results.

### **Our Strategy**

The key elements of our business strategy are:

*Develop our East Texas resource play.* We have approximately 12,000 net acres in San Augustine and Sabine Counties of East Texas, which we believe is prospective in the Haynesville Shale, Bossier Shale and James Lime formations. In November 2009, we announced the completion and initial production of our first well on this acreage, the Kardell #1H. The well tested at 30.7 MMcfe/d, which we believe to be the highest publicly reported 24-hour initial production rate for a Haynesville Shale well in Texas or Louisiana to date and is currently flowing to sales. We believe the Kardell #1H confirms the potential of our Bruin Prospect, which is comprised of 3,000 net acres in San Augustine County, resulting in over 100 potential drilling locations in multiple formations. We are currently in the planning stages of several wells in this area and intend to further evaluate and exploit these multiple formations beginning in early 2010. We have an additional 9,000 net acres outside this prospect within Sabine and San Augustine Counties, and we expect to drill our initial well on that acreage in early 2010. We intend to allocate a substantial portion of our capital budget over the next several years to develop the significant potential that we believe exists on our East Texas acreage. Based on our current capital budget, we expect to drill approximately 7 gross (3.0 net) wells in 2010 that will target the Haynesville and Bossier Shales, while retaining future development opportunities in shallower formations.

*Develop our South Texas resource play.* We have approximately 2,800 net acres in Bee County, Texas which we believe is prospective in the Austin Chalk and Eagle Ford Shale. In November 2009, we drilled our initial well on this acreage, the Dubose #1. This well is in the process of being completed with results expected prior to year end 2009. We intend to allocate a portion of our capital budget in 2010 to validate the potential we believe exists on our acreage.

*Exploit our existing producing property base to generate cash flows.* We believe our multi-year drilling inventory of high return exploitation opportunities on our existing producing properties provides us with a solid platform to continue growing our reserves and production for the next several years. We believe these projects, if successful, will allow us to fund a larger portion of our resource plays and exploration activities from cash flows from operations. In 2010, we intend to focus much of our exploitation drilling on our Liberty County acreage, located in Southeast Texas. We will be targeting the Yegua and Cook Mountain formations in which industry players have recently experienced success on wells in the area. We own 3D seismic data that covers substantially all of our Liberty County acreage, giving us a higher degree of confidence in the potential in this area. We have drilled 11 gross (6.8 net) wells in Liberty County since early 2008 and have successfully completed 82%. During 2010, we intend to drill 4 gross (2.6 net) wells in this area.

*Explore in defined producing trends.* Our exploration activities consist primarily of step-out drilling in known, producing formations in our legacy areas of South and Southeast Texas. In 2007, we began acquiring seismic data to use in identifying new exploration prospects. Currently, we have a library of over 4,200 square miles of 3D seismic data and over 2,500 linear miles of 2D seismic data.

## **Table of Contents**

*Make opportunistic acquisitions that meet our strategic and financial objectives.* We seek to acquire natural gas and crude oil properties, including both undeveloped and producing reserves in areas where we have specific operating expertise.

*Reduce commodity exposure through hedging.* We employ the use of swaps and costless collar derivative instruments to limit our exposure to commodity prices. As of September 30, 2009, we had 13.9 Bcfe of equivalent production hedged, representing 1.8 Bcf, 6.1 Bcf and 3.2 Bcf of natural gas hedges in place and 86 MBbl, 250 MBbl and 124 MBbl of crude oil hedges in place for the fourth quarter of 2009, the year 2010 and the year 2011, respectively. The average price of our natural gas and crude oil hedges in place is \$8.19/MMBtu and \$86.03/Bbl for the fourth quarter of 2009, \$7.71/MMBtu and \$83.02/Bbl in the year 2010 and \$7.32/MMBtu and \$66.50/Bbl in the year 2011.

### **Our Competitive Strengths**

Our competitive strengths include:

*Geographically focused operations in basins with established production profiles.* The geographic concentration of our current operations along the onshore Texas Gulf Coast and in South Texas allows us to establish economies of scale with respect to drilling, production, operating and administrative costs, and enables us to leverage our base of technical expertise in these geographic areas. In addition, we believe the cash flows from our existing properties provide a stable foundation to support our ongoing exploitation and development efforts.

*Significant operational control.* As of September 30, 2009, we operated a majority of our producing wells. As a result, we exercise a significant level of control over the amount and timing of expenses, capital allocation and other aspects of development, exploitation and exploration. While operatorship of future wells on our East Texas acreage will be subject to negotiation as drilling units are formed, we expect to operate a significant number of the wells we drill on this acreage.

*Proven track record of reserve and production growth.* Since 2005, we have significantly grown proved reserves and production through a combination of continued drilling success and the successful acquisition of underdeveloped properties that have proven to be complementary to our existing asset base and technical expertise. We plan to continue this growth by focusing on a balanced combination of drilling longer life, multi-pay natural gas targets within our resource plays and exploitation of our producing properties and undeveloped acreage.

*Large inventory of identified projects.* We currently have an inventory of over 800 identified potential drilling locations, including 375 associated with our existing conventional properties, plus an estimated 422 locations on our East Texas resource play acreage and an estimated 25 locations on our South Texas resource play acreage. Since the beginning of 2008, we have drilled 16 gross (10.7 net) operated and 18 gross (4.5 net) non-operated wells and have experienced a 91% success rate (excluding one well which has not yet been completed). We expect to drill 12 gross (6.0 net) wells in 2010.

*Experienced management and technical teams.* Our senior management team averages over 25 years of experience in the energy industry and is led by Allan D. Keel, President and Chief Executive Officer, who has 25 years of experience in the oil and natural gas industry. Mr. E. Joseph Grady, our Senior Vice President and Chief Financial Officer, has over 30 years of financial management experience in the energy industry. Other members of our senior management include: Mr. Tracy Price, our Senior Vice President Land Business/Development; Mr. Thomas H. Atkins, our Senior Vice President Exploration; and

Mr. Jay S. Mengle, our Senior Vice President Engineering, each of whom has more than 25 years of

**Table of Contents**

experience in the oil and gas industry. Our experienced management team has an established track record of successfully exploiting and developing natural gas and crude oil properties.

**Our Operations**

Our areas of primary focus include the following:

*East Texas.* Our East Texas properties include approximately 17,000 gross (12,000 net) acres acquired in 2008 and early 2009 in the highly prospective and active resource play in San Augustine and Sabine Counties, where we will focus primarily on the pursuit of the Haynesville Shale, Bossier Shale and James Lime formations. In October 2009, we drilled and completed our first well in this area, the Kardell #1H. While drilling this well, we identified additional prospective formations, including the Pettet and Knowles Lime.

*Southeast Texas.* Our Southeast Texas properties primarily include the Felicia field area in Liberty County. We own approximately 27,300 gross (15,100 net) acres in Liberty, Madison and Grimes Counties. As of September 30, 2009, we owned and operated 35 gross (27.0 net) producing wells, representing approximately 38% of our average daily production for the first nine months of 2009.

*South Texas.* Our South Texas properties include approximately 2,800 gross (2,800 net) acres in Bee County, which we believe to be prospective in the Austin Chalk and Eagle Ford Shale. Our conventional operations include approximately 87,600 gross (50,700 net) acres predominately in Brooks, Lavaca, DeWitt, Zapata, Webb and Matagorda Counties.

We also own interests in the following areas:

*Southwest Louisiana.* Our Southwest Louisiana properties include approximately 8,200 gross (3,600 net) acres, primarily in the Fenton field area of Calcasieu Parish and our legacy Grand Lake and Lacassine fields in Cameron Parish. In addition, we own a 15% working interest ownership in 2007 exploratory successes in Louisiana at Sabine Lake and West Cameron 432.

*Colorado and Other.* Our Colorado and other properties include primarily producing assets and approximately 16,900 gross (11,900 net) acres in the Denver Julesburg Basin in Colorado (mostly in Adams County) and a minor crude oil property in Mississippi.

The following table sets forth certain information with respect to our estimated proved reserves as of December 31, 2008, as estimated by Netherland, Sewell & Associates, Inc., and

**Table of Contents**

production for the nine months ended September 30, 2009. The following table also identifies potential drilling locations and net acreage as of September 30, 2009.

Region	Estimated Proved Reserves as of December 31, 2008 (MMcfe)	%	%	Average Daily Production For the Nine Months Ended September 30, 2009 (Mcf/d)	Net Acreage at September 30, 2009	Identified Potential Gross Drilling Locations at September 30, 2009 <sup>(1)</sup>
Southeast Texas	29,393	60.1%	85.8%	16,521	15,100	26
South Texas	60,602	78.0%	59.8%	11,963	53,500	124
Southwest Louisiana	10,398	62.4%	57.3%	3,139	3,600	4
Colorado and Other	6,675	71.5%	55.3%	539	11,900	164
East Texas <sup>(2)</sup>					12,000	422
Non-operated <sup>(3)</sup>	24,879	80.2%	79.8%	10,817		82
Total	131,947	72.9%	68.9%	42,979	96,100	822

<sup>(1)</sup> Includes multiple drilling locations on acreage with multiple target formations.

<sup>(2)</sup> We recently completed our first well on our East Texas acreage, the Kardell #1H, as a horizontal Haynesville Shale producer, in which we own a 52% working interest. Drilling locations in this region were identified assuming an allocated 100 acres per potential horizontal East Texas well drilled to multiple target formations.

<sup>(3)</sup> Our non-operated properties consist primarily of our 25% working interest in the Samano field in Starr and Hidalgo Counties in South Texas, our 28% working interest in certain fields in Liberty County in Southeast Texas and our 15% and 15% respective working interests resulting from exploratory successes in 2007 at Sabine Lake and West Cameron 432 in Southwest Louisiana.

### Preferred Stock Conversion

As of September 30, 2009, there were 80,500 shares of our Series G convertible preferred stock, par value \$0.01 per share ( Series G Preferred Stock ) outstanding. OCM GW Holdings, LLC ( Oaktree Holdings ), an affiliate of Oaktree Capital Management, LP ( Oaktree Capital Management ), currently holds 76,710 shares of our Series G Preferred Stock and Allan D. Keel, our President and CEO, holds 500 shares of our Series G Preferred Stock. Pursuant to a shareholders' agreement among holders of the Series G Preferred Stock, if Oaktree Holdings elects to convert any shares of Series G Preferred Stock into common stock, all other holders must likewise convert a proportional number of shares. We expect to enter into an agreement with Oaktree Holdings that will provide us the right, in connection with this offering, to cause Oaktree Holdings to convert all of its shares of our Series G Preferred Stock and the

accrued but unpaid dividends with respect to those preferred shares. We expect that the number of shares of our common stock to be issued per share of preferred stock will be equal to (i) the sum of \$500 plus the accrued but unpaid dividends with respect to such share divided by (ii) the lesser of \$9.00 and the price to the public for our common stock received in this offering. We intend to exercise this option and anticipate issuing \_\_\_\_\_ shares of our common stock in connection with the conversion of all of our Series G Preferred Stock and the accrued but unpaid dividends on those shares, assuming an offering price of \$ \_\_\_\_\_ per share, which is the midpoint in the range provided on the cover page of this prospectus. Of those shares of common stock, we anticipate issuing \_\_\_\_\_ shares of our common stock to Oaktree Holdings and \_\_\_\_\_ shares of our common stock to Mr. Keel.

As of September 30, 2009, there were 2,100 shares of our Series H convertible preferred stock, par value \$.01 per share (our Series H Preferred Stock ) outstanding, which shares were held of record by three stockholders, including 2,000 shares held by Oaktree Holdings. Each share of our

## **Table of Contents**

Series H Preferred Stock is convertible into the number of shares of our common stock that is equal to \$500 divided by \$3.50. Pursuant to the Certificate of Designations governing the terms of the Series H Preferred Stock, if Oaktree Holdings converts all of its shares of Series G Preferred Stock into common stock, all other shares of Series H Preferred Stock automatically convert into shares of our common stock. We anticipate issuing \_\_\_\_\_ shares of our common stock in connection with the conversion of all of our Series H Preferred Stock.

Upon the completion of this offering, Oaktree Holdings will own approximately \_\_\_\_\_ % of our outstanding common stock and Mr. Keel will hold approximately \_\_\_\_\_ % of our outstanding common stock. Please see \_\_\_\_\_ Summary Consolidated Financial Data Pro Forma Net Income (Loss) Per Share Data \_\_\_\_\_ for information with respect to the effect of the Preferred Stock Conversion on our net income (loss) per share.

### **Principal Stockholder**

Our principal stockholder is Oaktree Holdings, an affiliate of Oaktree Capital Management. Oaktree Capital Management is a premier global alternative and non-traditional investment manager with over \$67 billion in assets under management as of September 30, 2009. The firm emphasizes an opportunistic, value-oriented and risk-controlled approach to investments in distressed debt, high yield and convertible bonds, specialized private equity (including power infrastructure), real estate, emerging market and Japanese securities, and mezzanine finance. Oaktree Capital Management was founded in 1995 by a group of principals who have worked together since the mid-1980s. Headquartered in Los Angeles, the firm today has over 580 employees in 14 offices worldwide.

### **Risk Factors**

Investing in our common stock involves substantial risk. For a discussion of certain risks you should consider in making an investment, see Risk Factors beginning on page 15. In particular, the following considerations may offset our business strengths or have a negative effect on our business strategy as well as on activities on our properties, which could cause a decrease in the price of our common stock and result in a loss of all or a portion of your investment:

Natural gas, crude oil and natural gas liquids prices are volatile, and a decline in prices can significantly affect our financial results and impede our growth.

Initial production rates in the Haynesville Shale tend to decline steeply in the first twelve months of production and are not necessarily indicative of sustained production rates.

Our development and exploration operations, including on our East Texas resource play acreage, require substantial capital, and we may be unable to obtain needed capital or financing on satisfactory terms, which could lead to a loss of properties and a decline in our natural gas, crude oil and natural gas liquids reserves.

Reserve estimates depend on many assumptions that may turn out to be inaccurate. Any material inaccuracies in these reserve estimates or underlying assumptions could materially reduce the estimated quantities and present value of our reserves.

We have incurred net losses in the past and there can be no assurance that we will be profitable in the future.

Unless we replace our natural gas and crude oil reserves, our reserves and production will decline, which would adversely affect our cash flows, our ability to raise capital and the value of our common stock.

We have a substantial amount of indebtedness, which may adversely affect our cash flow and our ability to operate our business.

**Table of Contents**

**Corporate Structure**

Our company was founded in 1987 and is incorporated in Delaware. In February 2005, the Company, previously incorporated in Texas and named GulfWest Energy Inc., was recapitalized and in June 2005 was reincorporated as a Delaware corporation, and renamed Crimson Exploration Inc. We are organized as a holding company with most of our oil and gas assets held in our primary operating subsidiary.

**Our Offices**

Our principal office is located at 717 Texas Avenue, Suite 2900, Houston, Texas 77002 and our telephone number is (713) 236-7400.

**Table of Contents**

**The Offering**

Issuer	Crimson Exploration Inc.
Common stock offered by us	shares
Underwriters' option to purchase additional shares	We have granted the underwriters a 30-day option to purchase up to an additional shares of common stock.
Common stock outstanding immediately following this offering	shares of common stock (excluding shares that will be sold to the underwriters if they exercise their option to purchase additional shares), including shares that will be issued pursuant to the Preferred Stock Conversion, assuming an offering price of \$ , which is the midpoint of the range provided on the cover page of this prospectus
Use of proceeds	<p>We estimate that our net proceeds from this offering will be approximately \$ million after deducting underwriting discounts and commissions and estimated offering expenses, assuming an offering price of \$ , which is the midpoint of the range provided on the cover page of this prospectus.</p> <p>We intend to use the net proceeds from this offering to repay approximately \$ in aggregate principal amount of indebtedness outstanding under our revolving credit facility and our \$10 million unsecured promissory note.</p>
Dividend policy	We have not declared or paid any cash dividends on our common stock or preferred stock, and we do not currently anticipate paying any cash dividends on our common stock or preferred stock in the foreseeable future. For more information, see Dividend Policy.
Proposed NASDAQ symbol	CXPO
Risk factors	An investment in our common stock involves a high degree of risk. See Risk Factors and other information included elsewhere in this prospectus for a discussion of factors you should consider before investing in our common stock.

Unless we specifically state otherwise, the information in this prospectus (i) gives effect to the Preferred Stock Conversion; (ii) assumes no exercise by the underwriters of their option to purchase additional shares of common stock; (iii) excludes an aggregate of 551,315 shares of common stock reserved and available for future issuance under our 2005 Stock Incentive Plan and 1,960,310 shares issuable upon exercise of outstanding options at a weighted average exercise price of \$8.82 per share as of November 18, 2009; and (iv) is based on 6,421,564 shares outstanding as of November 10, 2009.

**Table of Contents****Summary Consolidated Financial Data**

The following table presents summary historical consolidated financial data of our business, as of the dates and for the periods indicated. The summary historical consolidated financial data as of and for the year ended December 31, 2008 have been derived from our audited consolidated financial statements and related notes included elsewhere in this prospectus. The summary historical consolidated financial data for the nine months ended September 30, 2008 and 2009 have been derived from our unaudited consolidated financial statements included elsewhere in this prospectus. The September 30, 2008 and 2009 financial statements have been prepared on a basis consistent with our audited consolidated financial statements and reflect all adjustments, consisting of normal recurring adjustments, which are, in the opinion of management, necessary for a fair presentation of the financial position and results of operations for the periods presented.

The summary consolidated financial data should be read in conjunction with Selected Historical Consolidated Financial Data, Management's Discussion and Analysis of Financial Condition and Results of Operations, Risk Factors and our consolidated financial statements and related notes included elsewhere in this prospectus.

- (1) For the year ended December 31, 2008, includes (i) an impairment expense of \$10.2 million in December 2008 with respect to our Grand Lake Field in Southwest Louisiana, resulting from negative reserve revisions resulting from year end low commodity prices, and (ii) \$25.8 million in asset impairments in the nine months ended September 30, 2008 resulting from our capital investment in the Rodessa formation within the Madisonville Field.
- (2) For the year ended December 31, 2008 and the nine months ended September 30, 2008, includes a gain of \$15.6 million resulting from the disposition of our interest in the Barnett Shale Play in January 2008.
- (3) Non-cash equity-based compensation charges were \$5.4 million, \$4.7 million and \$3.8 million, in 2008, 2007 and 2006, respectively. Non-cash equity-based compensation charges were \$4.5 million and \$1.9 million for the nine months ended September 30, 2009 and 2008, respectively. For the nine months ended September 30, 2009 and

2008, this expense was \$1.9 million and \$4.5 million, respectively.

- (4) Adjusted EBITDAX is a non-GAAP financial measure. Our definition of Adjusted EBITDAX and a reconciliation of net income (loss) to Adjusted EBITDAX is provided under Non-GAAP Financial Measures and Reconciliations.
- (5) Capital expenditures are derived from our consolidated statements of cash flows in our financial statements included elsewhere in this prospectus.
- (6) Other capital expenditures consists primarily of capital drilling and lease acquisitions.
- (7) On an adjusted pro forma basis to give effect to this offering, the application of the estimated net proceeds of this offering, the Preferred Stock Conversion, the issuance of \$12 million in aggregate principal amount of indebtedness under our unsecured promissory notes and the repayment of loans under our revolving credit facility with proceeds of one of such promissory notes.

**Table of Contents****Summary Reserve and Historical Operating Data**

The following tables present certain information with respect to our estimated proved natural gas, crude oil and natural gas liquids reserves at year end and operating data for the periods presented. The table shows estimated net proved reserves, based on the reserve reports dated December 31, 2006, 2007 and 2008, substantially all of which were prepared by our independent petroleum engineers. You should refer to Risk Factors, Management's Discussion and Analysis of Financial Condition and Results of Operations, Business Proved Reserves and Business Production, Revenue and Price History when evaluating the material presented below.

	Year Ended December 31,			Nine Months Ended	
	2006	2007	2008	September 30, 2008	2009
<b>Production:</b>					
Natural gas (MMcf)	1,542	9,068	13,136	9,753	8,143
Crude oil (MBbl)	185	409	498	385	264
Natural gas liquids (MBbl)		286	516	422	334
Total (MMcfe)	2,652	13,236	19,222	14,598	11,733
<b>Average Sales Prices (Before Hedging):</b>

Depreciation, depletion and amortization	\$ 1.52	\$ 2.33	\$ 2.63	\$ 2.47	\$ 3.55
<b>Proved Reserves (end of period)<sup>(2)</sup>:</b>					
Natural gas (MMcf)	31,388	91,239	96,169		
Crude oil (MBbl)	2,501	2,903	2,564		
Natural gas liquids (MBbl)		3,590	3,399		
Total proved reserves (MMcfe)	46,394	130,197	131,947		
Percent proved developed reserves	88%	75%	69%		
PV-10 value (\$ in millions) <sup>(3)</sup>	\$ 102.4	\$ 531.4	\$ 291.0		
Standardized measure (\$ in millions) <sup>(4)</sup>	77.4	399.5	260.9		

(1) Amounts shown are based on natural gas and crude oil sales, net of realized commodity derivative gains (losses).

(2) The prices utilized in the estimation of our proved reserves and future net revenues, PV-10 and Standardized Measure of Discounted Net Cash Flows were based on the West Texas Intermediate posted prices on

December 31, 2007 and December 31, 2008 of \$92.50 and \$41.00 per barrel for crude oil, respectively, and the Henry Hub spot market price of \$6.80 and \$5.71 per MMBtu for natural gas, respectively. The prices utilized in our estimation of our 2006 proved reserves were based on the NYMEX posted price on December 31, 2006 of \$61.06 per barrel for crude oil and the

**Table of Contents**

NYMEX spot market price of \$6.03 per MMBtu for natural gas. All prices were adjusted by lease for quality, energy content, transportation fees and regional price differentials.

- (3) PV-10 is a non-GAAP financial measure. A reconciliation of our Standardized Measure of Discounted Net Cash Flows to PV-10 is provided under Non-GAAP Financial Measures and Reconciliations.
- (4) The Standardized Measure of Discounted Net Cash Flows represents the present value of estimated future cash inflows from proved natural gas and crude oil reserves, less future development and production costs, and income tax expenses, discounted at 10% per annum to reflect timing of future cash flows and using the same pricing assumptions as were used to calculate PV-10. Standardized Measure differs from PV-10 because Standardized Measure includes the effect of future income taxes.

**Non-GAAP Financial Measures and Reconciliations**

**Adjusted EBITDAX**

EBITDAX represents net income (loss) before net interest expense, taxes, and depreciation, amortization and exploration expenses. Adjusted EBITDAX represents EBITDAX as further adjusted to reflect the items included in the table below, all of which will be required in determining our compliance with financial covenants under our revolving credit facility and second lien term loan agreement.

We have included EBITDAX and Adjusted EBITDAX in this prospectus to provide investors with a supplemental measure of our operating performance and information about the calculation of some of the financial covenants that are contained in our credit agreements. We believe EBITDAX is an important supplemental measure of operating performance because it eliminates items that have less bearing on our operating performance and so highlights trends in our core business that may not otherwise be apparent when relying solely on generally accepted accounting principles, or GAAP, financial measures. We also believe that securities analysts, investors and other interested parties frequently use EBITDAX in the evaluation of issuers, many of which present EBITDAX when reporting their results. Adjusted EBITDAX is a material component of the covenants that are imposed on us by our revolving credit facility and second lien term loan agreement. We are subject to financial covenant ratios that are or will be calculated by reference to Adjusted EBITDAX. Non-compliance with the financial covenants contained in these credit agreements could result in a default, an acceleration in the repayment of amounts outstanding, and a termination of lending commitments. For a description of required financial covenant levels and actual ratio calculations based on Adjusted EBITDAX, see Management's Discussion and Analysis of Financial Condition and Results of Operations Financial Condition Liquidity and Capital Resources Covenant compliance. Our management and external users of our financial statements, such as investors, commercial banks, research analysts and others, also use EBITDAX and Adjusted EBITDAX to assess:

the financial performance of our assets without regard to financing methods, capital structure or historical cost basis;

the ability of our assets to generate cash sufficient to pay interest costs and support our indebtedness;

our operating performance and return on capital as compared to those of other companies in our industry, without regard to financing or capital structure; and

the feasibility of acquisitions and capital expenditure projects and the overall rates of return on alternative investment opportunities.

EBITDAX and Adjusted EBITDAX are not presentations made in accordance with GAAP. As discussed above, we believe that the presentation of EBITDAX and Adjusted EBITDAX in this prospectus is appropriate. However, when evaluating our results, you should not consider EBITDAX and

**Table of Contents**

Adjusted EBITDAX in isolation of, or as a substitute for, measures of our financial performance as determined in accordance with GAAP, such as net income (loss). EBITDAX and Adjusted EBITDAX have material limitations as performance measures because they exclude items that are necessary elements of our costs and operations. Because other companies may calculate EBITDAX and Adjusted EBITDAX differently than we do, EBITDAX may not be, and Adjusted EBITDAX as presented in this prospectus is not, comparable to similarly-titled measures reported by other companies.

The following table reconciles net income (loss) to EBITDAX and Adjusted EBITDAX for the periods presented:

	<b>Year Ended December 31,</b>					<b>Nine Months Ended</b>	
	<b>2004</b>	<b>2005</b>	<b>2006</b>	<b>2007</b>	<b>2008</b>	<b>September 30,</b>	<b>2009</b>
	<i>(In thousands)</i>

	2,034	39	2	(683)	(15,210)	(15,272)	19
<b>Adjusted EBITDAX</b>	<b>\$ 4,309</b>	<b>\$ 8,296</b>	<b>\$ 9,219</b>	<b>\$ 76,003</b>	<b>\$ 132,707</b>	<b>\$ 108,715</b>	<b>\$ 55,160</b>

<sup>(1)</sup> Includes amortization of deferred finance costs and other fees and expenses payable under our credit agreements.

**PV-10**

PV-10 is a non-GAAP financial measure and represents the year-end present value of estimated future cash inflows from proved natural gas and crude oil reserves, less future development and production costs, discounted at 10% per annum to reflect timing of future cash flows and using pricing assumptions in effect at the end of the period. PV-10 differs from Standardized Measure of Discounted Net Cash Flows because it does not include the effects of income taxes or non-property related expenses such as general and administrative expenses and debt service or depreciation, depletion and amortization on future net revenues. Neither PV-10 nor Standardized Measure represents an estimate of fair market value of our natural gas and crude oil properties. PV-10 is used by the industry and by our management as an arbitrary reserve asset value measure to compare against past reserve bases and the reserve bases of other business entities that are not dependent on the taxpaying status of the entity.

The following table provides a reconciliation of our Standardized Measure to PV-10:

	<b>At December 31,</b>		
	<b>2006</b>	<b>2007</b>	<b>2008</b>
	<i>(In millions)</i>		
Standardized measure of discounted net cash flows	\$ 77.4	\$ 399.5	\$ 260.9
Present value of future income tax and other discounted at 10%	25.0	131.9	30.1
PV-10	\$ 102.4	\$ 531.4	\$ 291.0

**Table of Contents**

**RISK FACTORS**

*Investing in our common stock involves a high degree of risk. You should carefully consider the risk factors included below as well as the other information contained in this prospectus before investing in our common stock, or deciding whether you will or will not participate in this offering. Any of the following risks could materially and adversely affect our business, financial condition or results of operations. In such a case, you may lose all or part of your investment.*

**Risks Related to Our Business**

*Natural gas, crude oil and natural gas liquids prices are volatile, and a decline in prices can significantly affect our financial results and impede our growth.*

Our revenue, cash flow from operations and future growth depend upon the prices and demand for natural gas, crude oil and natural gas liquids. The markets for these commodities are very volatile. Even relatively modest drops in prices can significantly affect our financial results and impede our growth. Changes in natural gas, crude oil and natural gas liquids prices have a significant impact on the value of our reserves and on our cash flow. In addition, periods of sustained lower prices may compel us to reduce our capital expenditures and budget for drilling. Prices for natural gas, crude oil and natural gas liquids may fluctuate widely in response to relatively minor changes in the supply of and demand for natural gas, crude oil and natural gas liquids and a variety of additional factors that are beyond our control, such as:

- the domestic and foreign supply of natural gas, crude oil and natural gas liquids;
- the price of foreign imports;
- worldwide economic conditions;
- political and economic conditions in oil producing countries, including the Middle East and South America;
- the ability of members of the Organization of Petroleum Exporting Countries to agree to and maintain oil price and production controls;
- the level of consumer product demand;
- weather conditions;
- technological advances affecting energy consumption;
- availability of pipeline infrastructure, treating, transportation and refining capacity;
- domestic and foreign governmental regulations and taxes; and
- the price and availability of alternative fuels.

Lower natural gas and crude oil prices may not only decrease our revenues on a per share basis, but also may reduce the amount of natural gas and crude oil that we can produce economically. This may result in our having to make

substantial downward adjustments to our estimated proved reserves.

***Our East Texas leases must be drilled before expiration, generally within three years, in order to hold the leases by production. In the highly competitive market for Haynesville Shale acreage, failure to drill sufficient wells timely to hold this acreage will result in a substantial renewal cost, or if renewal is not feasible, loss of lease investment and prospective drilling opportunities in the Haynesville Shale, Bossier Shale and James Lime formations.***

Our East Texas leases have three year terms which require that an initial producing well be drilled prior to expiration date or the lease will terminate. Generally, once an initial well is drilled and

**Table of Contents**

completed as a producer, the lease is extended for the duration of production subject to payment of royalties and additional wells may be drilled on that lease. The leases in this area are extremely fragmented and much of the leased acreage is not contiguous. In many cases, contiguous leases owned by us are not large enough to accommodate horizontal drilling to the Haynesville Shale, which usually involves a horizontal lateral of between 4,000 to 5,000 feet within lease lines. In other cases, leases may be from fractional interest land owners and may not comprise a sufficient aggregate percentage working interest to make such a well economic. As a result, in order to realize the drilling opportunities in the Haynesville Shale, Bossier Shale and James Lime formations, we and other similarly situated major lease owners and operators in East Texas will need to cooperate and negotiate joint drilling operations in order to drill initial wells prior to lease expirations. These negotiations may include the right to act as operator for jointly owned wells. If we do not reach agreements with other major lease owners and operators to drill wells prior to lease expirations, or if we are unable to drill timely sufficient wells to hold our acreage, we will lose the drilling opportunities and investment in the expiring leases unless we can successfully negotiate to renew the leases. We may not be able to renew the expired leases, or if renewed, the cost of releasing could be substantial, particularly if development in this area proves successful.

***Part of our strategy involves exploratory drilling, including drilling in new or emerging plays. As a result, our drilling results in these areas are uncertain.***

The results of our exploratory drilling in new or emerging plays, such as in our East Texas resource play, are more uncertain than drilling results in areas that are developed and have established production. Since new or emerging plays and new formations have limited or no production history, we are less able to use past drilling results in those areas to help predict our future drilling results. To the extent we are unable to execute our expected drilling program in these areas, because of capital constraints, lease expirations, access to adequate gathering systems or pipeline take-away capacity, availability of drilling rigs and other services, or otherwise, and/or natural gas and crude oil prices decline, the return on our investment in these areas may not be as attractive as we anticipate and our common stock price may decrease. We could incur material write-downs of unevaluated properties, and the value of our undeveloped acreage could decline in the future if our drilling results are unsuccessful.

***The results of our planned exploratory drilling in our East Texas and South Texas resource plays, which are newly emerging plays with limited drilling and production history, are subject to more uncertainties than our drilling program in our more established areas of operation in the onshore South Texas and U.S. Gulf Coast regions and may not meet our expectations for reserves or production.***

We have recently completed drilling our first well in the Haynesville Shale in East Texas, for which we were not operator, as well as a test well in Bee County, South Texas to the Eagle Ford Shale. The exploration of the Haynesville Shale in the East Texas area where we own leases has been limited. Part of our drilling strategy to maximize recoveries from the Haynesville Shale involves the drilling of horizontal wells using completion techniques that have proven to be successful in other shale formations. Our experience with horizontal drilling of these shale plays is limited. The ultimate success of these drilling and completion strategies and techniques in these formations will be better evaluated over time as more wells are drilled and production profiles are better established. Accordingly, the results of our future drilling in the emerging shale plays are more uncertain than drilling results in our more established areas of operation with established reserves and production history.

***Initial production rates in the Haynesville Shale tend to decline steeply in the first twelve months of production and are not necessarily indicative of sustained production rates.***

The initial production rate for our first well in our Haynesville acreage was 30.7 MMcfe/d, which we believe to be the highest publicly reported 24-hour initial production rate for a Haynesville

**Table of Contents**

Shale well in Texas or Louisiana. However, initial production rates in the Haynesville Shale tend to decline steeply in the first twelve months of production and are not necessarily indicative of sustained production rates.

***Our development and exploration operations, including on our East Texas resource play acreage, require substantial capital, and we may be unable to obtain needed capital or financing on satisfactory terms, which could lead to a loss of properties and a decline in our natural gas, crude oil and natural gas liquids reserves.***

The oil and gas industry is capital intensive. We make and expect to continue to make substantial capital expenditures in our business and operations for the exploration, development, production and acquisition of natural gas, crude oil and natural gas liquids reserves. We intend to finance our future capital expenditures primarily with cash flow from operations and borrowings under our revolving credit facility. Our cash flow from operations and access to capital is subject to a number of variables, including:

our proved reserves;

the level of natural gas and crude oil we are able to produce from existing wells;

the prices at which natural gas and crude oil are sold; and

our ability to acquire, locate and produce new reserves.

If our revenues decrease as a result of lower natural gas, crude oil and natural gas liquids prices, operating difficulties, declines in reserves or for any other reason, we may have limited ability to obtain the capital necessary to sustain our operations at current levels or to further develop and exploit our current properties, or for exploratory activity. In order to fund our capital expenditures, we may need to seek additional financing. Our credit agreements contain covenants restricting our ability to incur additional indebtedness without the consent of the lenders. Our lenders may withhold this consent in their sole discretion. In addition, if our borrowing base is redetermined resulting in a lower borrowing base under our revolving credit facility, we may be unable to obtain financing otherwise available under our revolving credit facility. See Management's Discussion and Analysis of Financial Condition and Results of Operations Liquidity and Capital Resources Capital resources.

Furthermore, we may not be able to obtain debt or equity financing on terms favorable to us, or at all. In particular, the cost of raising money in the debt and equity capital markets has increased substantially while the availability of funds from those markets generally has diminished significantly. Also, as a result of concerns about the stability of financial markets generally and the solvency of counterparties specifically, the cost of obtaining money from the credit markets generally has increased as many lenders and institutional investors have increased interest rates, enacted tighter lending standards, refused to refinance existing debt at maturity on terms that are similar to existing debt, and reduced, or in some cases ceased, to provide funding to borrowers. The failure to obtain additional financing could result in a curtailment of our operations relating to exploration and development of our prospects, which in turn could lead to a possible loss of properties and a decline in our natural gas, crude oil and natural gas liquids reserves.

***Recent changes in the financial and credit markets may impact economic growth and natural gas, crude oil and natural gas liquids prices may continue to be adversely affected by general economic conditions.***

Based on a number of economic indicators, global economic activity has slowed substantially. At the present time, the rate at which the global economy will slow has become increasingly uncertain. A continued slowing of global economic growth, and, in particular, economic growth in the United States, will likely continue to reduce demand for natural gas, crude oil and natural gas liquids, which in turn could likely result in lower prices for natural gas, crude oil and natural gas liquids. Natural gas and crude oil prices dropped dramatically from record levels of approximately \$13

per

**Table of Contents**

MMbtu and \$145 per barrel, respectively, in July 2008 to below \$3 per MMBtu in September 2009 and below \$34 per barrel in December 2008. A reduction in demand for, and the resulting lower prices of, natural gas, crude oil and natural gas liquids could adversely affect our results of operations.

***Recent market events and conditions, including disruptions in the U.S. and international credit markets and other financial systems and the deterioration of the U.S. and global economic conditions, could, among other things, impede access to capital or increase the cost of capital, which would have an adverse effect on our ability to fund our working capital and other capital requirements.***

Recent market events and conditions, including unprecedented disruptions in the current credit and financial markets and the deterioration of economic conditions in the U.S. and internationally have had a significant material adverse impact on a number of financial institutions and have limited access to capital and credit for many companies. These disruptions could, among other things, make it more difficult for us to obtain, or increase our cost of obtaining, capital and financing for our operations. Access to additional capital may not be available on terms acceptable to us or at all. Difficulties in obtaining capital and financing or increased costs for obtaining capital and financing for our operations would have an adverse effect on our ability to fund our working capital and other capital requirements.

***We have incurred net losses in the past and there can be no assurance that we will be profitable in the future.***

We have incurred net losses in two of the last five fiscal years. We cannot assure you that our current level of operating results will continue or improve. Our activities could require additional debt or equity financing. Our future operating results may fluctuate significantly depending upon a number of factors, including industry conditions, prices of natural gas, crude oil and natural gas liquids, rates of production, timing of capital expenditures and drilling success. Negative changes in these variables could have a material adverse effect on our business, financial condition, results of operations and the market value of our common stock.

***Reserve estimates depend on many assumptions that may turn out to be inaccurate. Any material inaccuracies in these reserve estimates or underlying assumptions could materially reduce the estimated quantities and present value of our reserves.***

The process of estimating natural gas and crude oil reserves is complex. It requires interpretations of available technical data and many estimates, including estimates based upon assumptions relating to economic factors. Any significant inaccuracies in these interpretations or estimates could materially reduce the estimated quantities and present value of reserves shown in this prospectus. See **Business** for information about our crude oil and natural gas reserves.

In order to prepare our estimates, we must project production rates and timing of development expenditures. We must also analyze available geological, geophysical, production and engineering data. The extent, quality and reliability of this data can vary. The process also requires economic assumptions about matters such as crude oil and natural gas prices, drilling and operating expenses, the amount and timing of capital expenditures, taxes and the availability of funds.

Actual future production, crude oil and natural gas prices, revenues, taxes, development expenditures, operating expenses and quantities of recoverable natural gas and crude oil reserves most likely will vary from our estimates. Any significant variance could materially affect the estimated quantities and present value of reserves shown in this prospectus. In addition, we may adjust estimates of proved reserves to reflect production history, results of exploration and development, prevailing natural gas and crude oil prices and other factors, many of which are beyond our control.

**Table of Contents**

***Approximately 31% of our total estimated proved reserves at December 31, 2008 were proved undeveloped reserves.***

Recovery of proved undeveloped reserves requires significant capital expenditures and successful drilling operations. The reserve data included in the reserve engineer reports assumes that substantial capital expenditures are required to develop such reserves. Although cost and reserve estimates attributable to our natural gas and crude oil reserves have been prepared in accordance with industry standards, we cannot be sure that the estimated costs are accurate, that development will occur as scheduled or that the results of such development will be as estimated.

***The present value of future net cash flows from our proved reserves will not necessarily be the same as the current market value of our estimated natural gas, crude oil and natural gas liquids reserves.***

You should not assume that the present value of future net revenues from our proved reserves referred to in this prospectus is the current market value of our estimated natural gas, crude oil and natural gas liquids reserves. In accordance with SEC requirements, the estimated discounted future net cash flows from our proved reserves are based on prices and costs on the date of the estimate, held flat for the life of the properties. Actual future prices and costs may differ materially from those used in the present value estimate. The present value of future net revenues from our proved reserves as of December 31, 2008 was based on a Henry Hub spot market price of \$5.71 per MMBtu for natural gas and a West Texas Intermediate posted price of \$41.00 per barrel for crude oil on December 31, 2008. If crude oil prices were \$1.00 per Bbl lower than the price used, our PV-10 as of December 31, 2008 would have decreased from \$290.95 million to \$288.15 million. If natural gas prices were \$0.10 per Mcf lower than the price used, our PV-10 as of December 31, 2008, would have decreased from \$290.95 million to \$285.47 million. Any adjustments to the estimates of proved reserves or decreases in the price of crude oil or natural gas may decrease the value of our common stock.

Actual future net cash flows will also be affected by increases or decreases in consumption by oil and gas purchasers and changes in governmental regulations or taxation. The timing of both the production and the incurrence of expenses in connection with the development and production of oil and gas properties affects the timing of actual future net cash flows from proved reserves. In addition, the 10% discount factor, which is required by the SEC to be used in calculating discounted future net cash flows for reporting purposes, is not necessarily the most appropriate discount factor. The effective interest rate at various times and the risks associated with our business or the oil and gas industry in general will affect the accuracy of the 10% discount factor.

***Our estimates of proved reserves and related PV-10 and standardized measure of future net cash flows, which are prepared and presented under existing SEC rules, may change materially as a result of new SEC rules that will go into effect for fiscal years ending on or after December 31, 2009.***

This prospectus presents estimates of our proved reserves and related PV-10 and standardized measure of future net cash flows as of December 31, 2008, which estimates have been prepared and presented under existing SEC rules. The SEC has adopted new rules that are effective for fiscal years ending on or after December 31, 2009, which will require SEC reporting companies to prepare their reserves estimates using revised reserve definitions and revised pricing based on 12-month unweighted first-day-of-the-month average pricing. The SEC has released only limited interpretive guidance regarding reporting of reserve estimates under the new rules and may not issue further interpretive guidance on the new rules prior to the end of 2009. We have not determined the impact the new rules may have on our estimates of our proved reserves and related PV-10 and standardized measure of future net cash flows as of December 31, 2009, but the impact of the new rules on such estimates, and in particular the estimates of proved undeveloped reserves, could be material.

**Table of Contents**

***Our use of 2D and 3D seismic data is subject to interpretation and may not accurately identify the presence of natural gas and crude oil. In addition, the use of such technology requires greater predrilling expenditures, which could adversely affect the results of our drilling operations.***

Our decisions to purchase, explore, develop and exploit prospects or properties depend in part on data obtained through geophysical and geological analyses, production data and engineering studies, the results of which are uncertain. For example, we have over 4,200 square miles of 3D data in the South Texas and Gulf Coast regions and 1,130 square miles of 3D data in the Lobo trend in South Texas that our internal prospect generation team uses to develop drilling opportunities in these areas. However, even when used and properly interpreted, 3D seismic data and visualization techniques only assist geoscientists and geologists in identifying subsurface structures and hydrocarbon indicators. They do not allow the interpreter to know if hydrocarbons are present or producible economically. Other geologists and petroleum professionals, when studying the same seismic data, may have significantly different interpretations than our professionals.

In addition, the use of 3D seismic and other advanced technologies require greater predrilling expenditures than traditional drilling strategies, and we could incur losses due to such expenditures. As a result, our drilling activities may not be geologically successful or economical, and our overall drilling success rate or our drilling success rate for activities in a particular area may not improve.

***Drilling for and producing natural gas and crude oil are high risk activities with many uncertainties that could adversely affect our business, financial condition or results of operations.***

Our drilling and operating activities are subject to many risks, including the risk that we will not discover commercially productive reservoirs. Drilling for natural gas and crude oil can be unprofitable, not only from dry holes, but from productive wells that do not produce sufficient revenues to return a profit. In addition, our drilling and producing operations may be curtailed, delayed or canceled as a result of other factors, including:

- unusual or unexpected geological formations and miscalculations;
- pressures;
- fires;
- explosions and blowouts;
- pipe or cement failures;
- environmental hazards, such as natural gas leaks, pipeline ruptures and discharges of toxic gases;
- loss of drilling fluid circulation;
- title problems;
- facility or equipment malfunctions;
- unexpected operational events;
- shortages of skilled personnel;

shortages or delivery delays of equipment and services;

compliance with environmental and other regulatory requirements;

natural disasters; and

adverse weather conditions.

## **Table of Contents**

Any of these risks can cause substantial losses, including personal injury or loss of life; severe damage to or destruction of property, natural resources and equipment; pollution; environmental contamination; clean-up responsibilities; loss of wells; repairs to resume operations; and regulatory fines or penalties.

Insurance against all operational risks is not available to us. Additionally, we may elect not to obtain insurance if we believe that the cost of available insurance is excessive relative to the perceived risks presented. We carry limited environmental insurance, thus, losses could occur for uninsurable or uninsured risks or in amounts in excess of existing insurance coverage. The occurrence of an event that is not covered in full or in part by insurance could have a material adverse impact on our business activities, financial condition and results of operations.

### ***Our acquisition strategy may subject us to greater risks.***

The successful acquisition of properties requires an assessment of recoverable reserves, future natural gas and crude oil prices, operating costs, potential environmental and other liabilities, and other factors beyond our control. Such assessments are necessarily inexact and their accuracy uncertain. In connection with such an assessment, we perform a review of the subject properties that we believe to be generally consistent with industry practices. Such a review, however, will not reveal all existing or potential problems, costs and liabilities, nor will it permit us, as the buyer, to become sufficiently familiar with the properties to fully assess their capabilities or deficiencies. We may not inspect every well and, even when an inspection is undertaken, structural and environmental problems may not necessarily be observable.

### ***We may be unable to successfully integrate the properties and assets we acquire with our existing operations.***

Integration of the properties and assets we acquire may be a complex, time consuming and costly process. Failure to timely and successfully integrate these assets and properties with our operations may have a material adverse effect on our business, financial condition and result of operations. The difficulties of integrating these assets and properties present numerous risks, including:

acquisitions may prove unprofitable and fail to generate anticipated cash flows;

we may need to (i) recruit additional personnel and, in this competitive labor market, we cannot be certain that any of our recruiting efforts will succeed, and (ii) expand corporate infrastructure to facilitate the integration of our operations with those associated with the acquired properties, and failure to do so may lead to disruptions in our ongoing businesses or distract our management; and

our management's attention may be diverted from other business concerns.

We are also exposed to risks that are commonly associated with acquisitions of this type, such as unanticipated liabilities and costs, some of which may be material. As a result, the anticipated benefits of acquiring assets and properties may not be fully realized, if at all.

### ***When we acquire properties, in most cases, we are not entitled to contractual indemnification for pre-closing liabilities, including environmental liabilities.***

We generally acquire interests in properties on an as is basis with limited remedies for breaches of representations and warranties, and in these situations we cannot assure you that we will identify all areas of existing or potential exposure. In those circumstances in which we have contractual indemnification rights for pre-closing liabilities, we cannot assure you that the seller will be able to fulfill its contractual obligations. In addition, the competition to

acquire producing natural gas and crude oil properties is intense and many of our larger competitors have financial and other resources substantially greater than ours. We cannot assure you that we will be able to acquire producing natural gas and crude oil properties that have economically recoverable reserves for acceptable prices.

**Table of Contents**

***We cannot control activities on properties that we do not operate and are unable to control their proper operation and profitability.***

We do not operate a significant portion of the properties in which we own an interest. As a result, we have limited ability to exercise influence over, and control the risks associated with, the operations of these properties. The failure of an operator of our wells to adequately perform operations, an operator's breach of the applicable agreements or an operator's failure to act in ways that are in our best interests could reduce our production and revenues. The success and timing of our drilling and development activities on properties operated by others therefore depend upon a number of factors outside of our control, including:

- the nature and timing of drilling and operational activities;
- the timing and amount of capital expenditures;
- the operator's expertise and financial resources;
- the approval of other participants in drilling wells; and
- the operator's selection of suitable technology.

***If our access to markets is restricted, it could negatively impact our production, our income and ultimately our ability to retain our leases.***

Market conditions or the unavailability of satisfactory natural gas and crude oil transportation arrangements may hinder our access to natural gas and crude oil markets or delay our production. The availability of a ready market for our crude oil and natural gas production depends on a number of factors, including the demand for and supply of natural gas and crude oil and the proximity of reserves to pipelines and terminal facilities. Our ability to market our production depends in substantial part on the availability and capacity of gathering systems, pipelines and processing facilities owned and operated by third parties. Our failure to obtain such services on acceptable terms could materially harm our business. Our productive properties may be located in areas with limited or no access to pipelines, thereby necessitating delivery by other means, such as trucking, or requiring compression facilities. Such restrictions on our ability to sell our natural gas and crude oil may have several adverse effects, including higher transportation costs, fewer potential purchasers (thereby potentially resulting in a lower selling price) or, in the event we were unable to market and sustain production from a particular lease for an extended time, possible loss of a lease due to lack of production.

***Unless we replace our natural gas and crude oil reserves, our reserves and production will decline, which would adversely affect our cash flows, our ability to raise capital and the value of our common stock.***

Unless we conduct successful development, exploitation and exploration activities or acquire properties containing proved reserves, our proved reserves will decline as those reserves are produced. Producing natural gas and crude oil reservoirs generally are characterized by declining production rates that vary depending upon reservoir characteristics and other factors. Our future natural gas and crude oil reserves and production, and therefore our cash flow and results of operations, are highly dependent on our success in efficiently developing and exploiting our current reserves and economically finding or acquiring additional recoverable reserves. The value of our common stock and our ability to raise capital will be adversely impacted if we are not able to replace our reserves that are depleted by production. We may not be able to develop, exploit, find or acquire sufficient additional reserves to replace our current and future production.

**Table of Contents**

***The potential lack of availability or high cost of drilling rigs, equipment, supplies, personnel and crude oil field services could adversely affect our ability to execute on a timely basis our exploration and development plans within our budget.***

When the prices of natural gas and crude oil increase, such as during 2008, we encounter an increase in the cost of securing drilling rigs, equipment and supplies. In addition, larger producers may be more likely to secure access to such equipment by offering more lucrative terms. If we are unable to acquire access to such resources, or can obtain access only at higher prices, our ability to convert our reserves into cash flow could be delayed and the cost of producing those reserves could increase significantly, which would adversely affect our results of operation and financial condition.

***Our hedging activities could result in financial losses or reduce our income.***

To achieve a more predictable cash flow and to reduce our exposure to adverse fluctuations in the prices of natural gas, crude oil and natural gas liquids, as well as interest rates, we currently, and may in the future, enter into derivative arrangements for a significant portion of our natural gas, crude oil and/or natural gas liquids production and our debt that could result in both realized and unrealized hedging losses. We utilize financial commodity price hedge instruments to minimize exposure to declining prices on our crude oil and natural gas liquids production. As of September 30, 2009, we had 13.9 Bcfe of equivalent production hedged representing 1.8 Bcf, 6.1 Bcf and 3.2 Bcf of natural gas hedges in place and 86 MBbl, 250 MBbl and 124 MBbl of crude oil hedges in place for the fourth quarter of 2009, 2010 and 2011, respectively. The average price of our natural gas and crude oil hedges in place is \$8.19/MMBtu and \$86.03/Bbl for the fourth quarter of 2009, \$7.71/MMBtu and \$83.02/Bbl in the year 2010 and \$7.32/MMBtu and \$66.50/Bbl in the year 2011. As of September 30, 2009, we had entered into interest rate swap agreements with a total notional amount of \$200.0 million related to our indebtedness. Under our interest rate swap agreements, we receive interest at a floating rate equal to one-month LIBOR and pay interest at a fixed rate of 1.50% for \$50.0 million and pay interest at 2.90% for \$150.0 million.

Our actual future production may be significantly higher or lower than we estimate at the time we enter into hedging transactions for such period. If the actual amount is higher than we estimate, we will have greater commodity price exposure than we intended. If the actual amount is lower than the nominal amount that is subject to our derivative financial instruments, we might be forced to satisfy all or a portion of our derivative transactions without the benefit of the cash flow from our sale or purchase of the underlying physical commodity, resulting in a substantial diminution of our liquidity. As a result of our interest rate swap agreements, we may fail to benefit when rates fall, to the extent we have agreed to pay interest at a fixed rate, or face a greater degree of exposure when rates increase, to the extent we have agreed to pay interest at a floating rate. As a result of these factors, our hedging activities may not be as effective as we intend in reducing the volatility of our cash flows, and in certain circumstances may actually increase the volatility of our cash flows.

***Competition in the oil and gas industry is intense, and many of our competitors have resources that are greater than ours.***

We operate in a highly competitive environment for acquiring prospects and productive properties, marketing natural gas and crude oil, and securing equipment and trained personnel. Many of our competitors possess and employ financial, technical and personnel resources substantially greater than ours. Those companies may be able to develop and acquire more prospects and productive properties than our financial our personnel resources permit. Our ability to acquire additional prospects and discover reserves in the future will depend on our ability to evaluate and select suitable properties and consummate transactions in a highly competitive environment. Also, there is substantial competition for capital available for investment in the oil and gas industry. Our larger competitors may be better able to withstand sustained periods of unsuccessful drilling and absorb the burden of changes in laws and regulations more

easily than we can, which would adversely affect our competitive position. We may not be able to compete successfully in the future in acquiring

**Table of Contents**

prospective reserves, developing reserves, marketing hydrocarbons, attracting and retaining quality personnel and raising additional capital.

***We depend on our senior management team and other key personnel. Accordingly, the loss of any of these individuals could adversely affect our business, financial condition and the results of operations and future growth.***

Our success is largely dependent on the skills, experience and efforts of our people. The loss of the services of one or more members of our senior management team or of our other employees with critical skills needed to operate our business could have a negative effect on our business, financial conditions and results of operations and future growth. These persons include the executive officers listed in Management Executive Officers and Directors. Our ability to manage our growth, if any, will require us to continue to train, motivate and manage our employees and to attract, motivate and retain additional qualified personnel. Competition for these types of personnel is intense and we may not be successful in attracting, assimilating and retaining the personnel required to grow and operate our business profitably.

***We are subject to complex federal, state, local and other law and regulations that could adversely affect the cost, manner or feasibility of conducting our operations.***

Our operations are subject to complex and stringent laws and regulations. In order to conduct our operations in compliance with these laws and regulations, we must obtain and maintain numerous permits, approvals and certificates from various federal, state and local governmental authorities. We may incur substantial costs in order to maintain compliance with these existing laws and regulations. In addition, our costs of compliance may increase if existing laws and regulations are revised or reinterpreted, or if new laws and regulations become applicable to our operations. For instance, we may be unable to obtain all necessary permits, approvals and certificates for proposed projects. Alternatively, we may have to incur substantial expenditures to obtain, maintain or renew authorizations to conduct existing projects. If a project is unable to function as planned due to changing requirements or public opposition, we may suffer expensive delays, extended periods of non-operation or significant loss of value in a project. All such costs may have a negative effect on our business and results of operations.

Our business is subject to federal, state and local regulations as interpreted and enforced by governmental agencies and other bodies vested with much authority relating to the exploration for, and the development, production, transportation and marketing of, natural gas, crude oil and natural gas liquids. Failure to comply with such laws and regulations, as interpreted and enforced, could have a material adverse effect on us.

***Federal and state legislation and regulatory initiatives relating to hydraulic fracturing could result in increased costs and additional operating restrictions or delays.***

Congress is currently considering legislation to amend the federal Safe Drinking Water Act to require the disclosure of chemicals used by the oil and natural gas industry in the hydraulic fracturing process. Hydraulic fracturing is an important and commonly used process in the completion of unconventional natural gas wells in shale formations. This process involves the injection of water, sand and chemicals under pressure into rock formations to stimulate natural gas production. Sponsors of these bills, which are currently pending in the Energy and Commerce Committee and the Environmental and Public Works Committee of the House of Representatives and Senate, respectively, have asserted that chemicals used in the fracturing process could adversely affect drinking water supplies. The proposed legislation would require the reporting and public disclosure of chemicals used in the fracturing process, which could make it easier for third parties opposing the hydraulic fracturing process to initiate legal proceedings based on allegations that specific chemicals used in the fracturing process could adversely affect groundwater. In addition, these bills, if adopted, could establish an additional level of regulation at the federal level that could lead to operational delays or increased

**Table of Contents**

operating costs and could result in additional regulatory burdens that could make it more difficult to perform hydraulic fracturing and increase our costs of compliance and doing business.

***Our operations expose us to potentially substantial costs and liabilities with respect to environmental, health and safety matters.***

We may incur substantial costs and liabilities as a result of environmental, health and safety requirements applicable to our crude oil and natural gas operations and other activities. These costs and liabilities could arise under a wide range of federal, state and local environmental, health and safety laws and regulations that cover, among other things, emissions into the air and water, habitat and endangered species protection, the containment and disposal of hazardous substances, oil field waste and other waste materials, the use of underground injection wells, and wetlands protection. These laws and regulations are complex, change frequently and have tended to become increasingly stringent over time. Failure to comply with environmental, health and safety laws or regulations may result in assessment of administrative, civil and criminal penalties, imposition of cleanup and site restoration costs and liens, the suspension or revocation of necessary permits, licenses and authorizations, the requirement that additional pollution controls be installed and the issuance of orders enjoining or limiting our current or future operations. Compliance with these laws and regulations also increases the cost of our operations and may prevent or delay the commencement or continuance of a given operation.

Under certain environmental laws that impose strict, joint and several liability, we may be required to remediate our contaminated properties regardless of whether such contamination resulted from the conduct of others or from consequences of our own actions that were in compliance with all applicable laws at the time those actions were taken. In addition, claims for damages to persons, property or natural resources may result from environmental and other impacts of our operations. Moreover, new or modified environmental, health or safety laws, regulations or enforcement policies could be more stringent and impose unforeseen liabilities or significantly increase compliance costs. Therefore, the costs to comply with environmental, health, or safety laws or regulations or the liabilities incurred in connection with them could significantly and adversely affect our business, financial condition or results of operations. In addition, many countries, as well as more than one-third of the states have agreed to regulate emissions of greenhouse gases, including methane, a primary component of natural gas, and carbon dioxide, a byproduct of burning natural gas and oil. National greenhouse gas legislation and regulation is in early stages of development in the U.S., and we are currently unable to determine the impact of potential greenhouse gas emission control requirements. Mandatory greenhouse gas emissions reductions may impose increased costs on our business and could adversely impact some of our operations. It is possible that broader national or regional greenhouse gas reduction requirements may directly or indirectly have an adverse impact on natural gas or other fuel markets, including future demand for the natural gas, crude oil and natural gas liquids that we produce. See

Business Environmental Regulations.

***If we are unable to successfully prevent or address material weaknesses in our internal control over financial reporting, or any other control deficiencies, our ability to report our financial results on a timely and accurate basis and to comply with disclosure and other reporting requirements may be adversely affected.***

While we have taken actions designed to address compliance with the internal control, disclosure control and other requirements of the Sarbanes-Oxley Act of 2002 and the rules and regulations promulgated by the SEC implementing these requirements, there are inherent limitations in our ability to control all circumstances. Our management, including our Chief Executive Officer and Chief Financial Officer, does not expect that our internal controls and disclosure controls will prevent all errors and all fraud. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. For example, for the quarter ended March 31, 2007, our management concluded that our historical documentation of

## **Table of Contents**

related tax positions could have resulted in a material misstatement to our annual or interim financial statements and, accordingly, concluded that this deficiency was a material weakness. Although this material weakness was subsequently remedied, if we are unable to successfully prevent or address these and other material weaknesses in our internal control systems, our ability to report our financial results on a timely and accurate basis and to comply with disclosure and other reporting requirements may be adversely affected.

### ***Derivatives regulation could restrict our ability to execute commodity derivative instruments as a hedge against fluctuating commodity prices.***

Various measures are being proposed by committees of Congress, the U.S. Treasury Department, and other agencies to restrict the use of over-the-counter ( OTC ) derivative instruments. These proposals include, but are not limited to, requiring cash collateral on all OTC derivatives and requiring all OTC derivatives to be executed and settled through an exchange system.

Although we do not currently know the exact form any final legislation or rule-making activity will take, any restriction on the use of OTC instruments could have a significant impact on our business. Limits on the use of OTC instruments could significantly reduce our ability to execute strategic price hedges against commodity price volatility. In addition, cash collateral requirements could create significant liquidity issues and exchange system trades may restrict our ability to execute derivative instruments to fit our strategic needs.

## **Risks Related to an Investment in Our Common Stock and this Offering**

***One stockholder will, after the completion of this offering, hold a significant number of our shares, which will limit your ability to influence corporate activities and may adversely affect the market price of our common stock, and that stockholder's interests may conflict with the interests of our other stockholders.***

After completion of the Preferred Stock Conversion and the issuance of shares of common stock in this offering, we expect, based on the midpoint of the range provided on the cover of this prospectus, there will be approximately      million shares of our common stock outstanding. Of that amount, we expect that      million shares of our common stock will be held by Oaktree Holdings. As a result, Oaktree Holdings will own or control outstanding common stock representing, in the aggregate, an approximate      % voting interest in us. As a result of this stock ownership, Oaktree Holdings will possess significant influence over matters requiring approval by our stockholders, including the adoption of amendments to our certificate of incorporation and bylaws and significant corporate transactions. Such ownership and control may also have the effect of delaying or preventing a future change of control, impeding a merger, consolidation, takeover or other business combination or discouraging a potential acquirer from making a tender offer or otherwise attempting to obtain control of our company.

Oaktree Holdings and its affiliates engage, from time to time in the ordinary course of their respective businesses, in the trading securities of, and investing in, energy companies. As a result, conflicts may arise between the interests of Oaktree Holdings, on the one hand, and the interests of our other stockholders, on the other hand. Oaktree Holdings may, from time to time, compete directly or indirectly with us or prevent us from taking advantage of corporate opportunities. Oaktree Holdings may also pursue acquisition opportunities that may be complementary to our business, and as a result, those acquisition opportunities may not be available to us.

**Table of Contents**

***The price of our common stock may fluctuate significantly, and you could lose all or part of your investment.***

Volatility in the market price of our common stock price may prevent you from being able to sell your common stock at or above the price you paid for your common stock. The market price for our common stock could fluctuate significantly for various reasons, including:

- our operating and financial performance and prospects;
- our quarterly or annual earnings or those of other companies in our industry;
- conditions that impact demand for natural gas, crude oil and natural gas liquids;
- future announcements concerning our business;
- changes in financial estimates and recommendations by securities analysts;
- actions of competitors;
- market and industry perception of our success, or lack thereof, in pursuing our growth strategy;
- strategic actions by us or our competitors, such as acquisitions or restructurings;
- changes in government and environmental regulation;
- general market, economic and political conditions;
- changes in accounting standards, policies, guidance, interpretations or principles;
- sales of common stock by us or members of our management team; and
- natural disasters, terrorist attacks and acts of war.

See Risks Related to Our Business.

In addition, in recent years, the stock market has experienced significant price and volume fluctuations. This volatility has had a significant impact on the market price of securities issued by many companies, including companies in our industry. The changes frequently appear to occur without regard to the operating performance of the affected companies. Hence, the price of our common stock could fluctuate based upon factors that have little or nothing to do with our company, and these fluctuations could materially reduce our share price.

***We have no plans to pay regular dividends on our common stock, so you may not receive funds without selling your common stock.***

Our board of directors presently intends to retain all of our earnings for the expansion of our business; therefore, we have no plans to pay regular dividends on our common stock. Any payment of future dividends will be at the discretion of our board of directors and will depend on, among other things, our earnings, financial condition, capital requirements, level of indebtedness, statutory and contractual restrictions applying to the payment of dividends, and other considerations that our board of directors deems relevant. Also, the provisions of our revolving credit facility and second lien term loan agreement restrict the payment of dividends. Accordingly, you may have to sell some or all

of your common stock in order to generate cash flow from your investment.

***Future sales or the possibility of future sales of a substantial amount of our common stock may depress the price of shares of our common stock.***

Future sales or the availability for sale of substantial amounts of our common stock in the public market could adversely affect the prevailing market price of our common stock and could impair our ability to raise capital through future sales of equity securities.

## **Table of Contents**

Upon consummation of this offering and the Preferred Stock Conversion, there will be \_\_\_\_\_ shares of our common stock outstanding. All shares of our common stock sold in this offering will be freely transferable without restriction or further registration under the Securities Act of 1933, as amended, or the Securities Act. The remaining \_\_\_\_\_ shares of our common stock outstanding, including the shares of common stock owned by Oaktree Holdings, our directors and executive officers, will be restricted securities within the meaning of Rule 144 under the Securities Act, but, subject to the lock-up agreements described in Underwriting, \_\_\_\_\_ will be eligible for resale subject to applicable volume, manner of sale, holding period and other limitations of Rule 144. See Shares Eligible for Future Sale for a discussion of the shares of our common stock that may be sold into the public market in the future.

We may issue shares of our common stock or other securities from time to time as consideration for future acquisitions and investments. If any such acquisition or investment is significant, the number of shares of our common stock, or the number or aggregate principal amount, as the case may be, of other securities that we may issue may in turn be substantial. We may also grant registration rights covering those shares of our common stock or other securities in connection with any such acquisitions and investments.

As of November 18, 2009, we had 2.0 million options to purchase shares of our common stock outstanding, 1,239,311 of which were vested.

We cannot predict the size of future issuances of our common stock or the effect, if any, that future issuances and sales of our common stock will have on the market price of our common stock. Sales of substantial amounts of our common stock (including shares of our common stock issued in connection with an acquisition), or the perception that such sales could occur, may adversely affect prevailing market prices for our common stock.

***Our organizational documents may impede or discourage a takeover, which could deprive our investors of the opportunity to receive a premium for their shares.***

Provisions of our certificate of incorporation and bylaws may make it more difficult for, or prevent a third party from, acquiring control of us without the approval of our board of directors. These provisions:

permit us to issue, without any further vote or action by the stockholders, additional shares of preferred stock in one or more series and, with respect to each such series, to fix the number of shares constituting the series and the designation of the series, the voting powers (if any) of the shares of the series, and the preferences and relative, participating, optional, and other special rights, if any, and any qualification, limitations or restrictions of the shares of such series;

require special meetings of the stockholders to be called by the Chairman of the Board, the Chief Executive Officer, the President, or by resolution of a majority of the board of directors;

require business at special meetings to be limited to the stated purpose or purposes of that meeting;

require that stockholder action be taken at a meeting rather than by written consent, unless approved by our board of directors;

require that stockholders follow certain procedures, including advance notice procedures, to bring certain matters before an annual meeting or to nominate a director for election; and

permit directors to fill vacancies in our board of directors.

The foregoing factors, as well as the significant common stock ownership by Oaktree Holdings, could discourage potential acquisition proposals and could delay or prevent a change of control. See Description of Capital Stock.

**Table of Contents**

***After this offering, we will be subject to the Delaware business combination law.***

After this offering, we will be subject to the provisions of Section 203 of the Delaware General Corporation Law. In general, Section 203 prohibits a publicly held Delaware corporation from engaging in a business combination with an interested stockholder for a period of three years after the date of the transaction in which the person became an interested stockholder, unless the business combination is approved in a prescribed manner.

Section 203 defines a business combination as a merger, asset sale or other transaction resulting in a financial benefit to the interested stockholders. Section 203 defines an interested stockholder as a person who, together with affiliates and associates, owns, or, in some cases, within three years prior, did own, 15% or more of the corporation's voting stock. Under Section 203, a business combination between us and an interested stockholder is prohibited unless:

our board of directors approved either the business combination or the transaction that resulted in the stockholders becoming an interested stockholder prior to the date the person attained the status;

upon consummation of the transaction that resulted in the stockholder becoming an interested stockholder, the interested stockholder owned at least 85% of our voting stock outstanding at the time the transaction commenced, excluding, for purposes of determining the number of shares outstanding, shares owned by persons who are directors and also officers and issued employee stock plans, under which employee participants do not have the right to determine confidentially whether shares held under the plan will be tendered in a tender or exchange offer; or

the business combination is approved by our board of directors on or subsequent to the date the person became an interested stockholder and authorized at an annual or special meeting of the stockholders by the affirmative vote of the holders of at least 66<sup>2</sup>/<sub>3</sub>% of the outstanding voting stock that is not owned by the interested stockholder.

This provision has an anti-takeover effect with respect to transactions not approved in advance by our board of directors, including discouraging takeover attempts that might result in a premium over the market price for the shares of our common stock. With approval of our stockholders, we could amend our certificate of incorporation in the future to elect not to be governed by the anti-takeover law. This election would become effective twelve months after the adoption of the amendment and would not apply to any business combination with any person who became an interested stockholder on or before the adoption of the amendment. Section 203 of the Delaware General Corporation Law will not apply to Oaktree Holdings.

***We have blank check preferred stock.***

Our certificate of incorporation authorizes the board of directors to issue preferred stock without further stockholder action in one or more series and to designate the dividend rate, voting rights and other rights preferences and restrictions. The issuance of preferred stock could have an adverse impact on holders of common stock. Preferred stock is senior to common stock. Additionally, preferred stock could be issued with dividend rights senior to the rights of holders of common stock. Finally, preferred stock could be issued as part of a poison pill, which could have the effect of deterring offers to acquire our company. See Description of Capital Stock Anti-Takeover Effects of Delaware Laws and Our Charter and Bylaws Provisions.

***The holders of our common stock do not have cumulative voting rights, preemptive rights or rights to convert their common stock to other securities.***

We are authorized to issue 200.0 million shares of common stock, \$0.001 par value per share. As of December 31, 2008, there were 5.8 million shares of common stock issued and outstanding. After giving effect to this offering and the Preferred Stock Conversion, there will be      million shares

**Table of Contents**

of common stock issued and outstanding. Since the holders of our common stock do not have cumulative voting rights, the holders of a majority of the shares of common stock present, in person or by proxy, will be able to elect all of the members of our board of directors. The holders of shares of our common stock do not have preemptive rights or rights to convert their common stock into other securities.

***Prior to this offering, our common stock has been thinly traded and there has been no active trading market for our common stock and an active trading market may not develop.***

The trading volume of our common stock has historically been low and reliable market quotations for our common stock have not been available, partially due to the fact that we are not listed on an exchange and our common stock is only traded over-the-counter. An active trading market for our common stock may not develop or, if developed, may not continue, and a holder of any of our securities may find it difficult to dispose of, or to obtain accurate quotations as to the market value of such securities.

***The impairment of financial institutions could adversely affect us.***

We have exposure to different counterparties, and we have entered into transactions with counterparties in the financial services industry specifically, with members of our bank group. These transactions could expose us to credit risk in the event of default of our counterparty. We have exposure to these financial institutions in the form of derivative transactions in connection with our hedges. We also maintain insurance policies with insurance companies to protect us against certain risks inherent in our business. In addition, if any lender under our credit facility is unable to fund its commitment, our liquidity could be reduced by an amount up to the aggregate amount of such lender's commitment under our credit facility.

***We have a substantial amount of indebtedness, which may adversely affect our cash flow and our ability to operate our business.***

As of September 30, 2009, pro forma for the application of net proceeds from this offering we had outstanding debt of \$ million under our credit agreements. Our substantial level of indebtedness increases the possibility that we may be unable to pay, when due, the principal of, interest on, or other amounts due in respect of our indebtedness. Our substantial indebtedness, combined with our other financial obligations and contractual commitments, could have other important consequences, including the following:

funds available for our operations and general corporate purposes or for capital expenditures will be reduced as a result of the dedication of a portion of our consolidated cash flow from operations to the payment of the principal and interest on our indebtedness;

we may be more highly leveraged than certain of our competitors, which may place us at a competitive disadvantage;

certain of the borrowings under our debt agreements have floating rates of interest, which causes us to be vulnerable to increases in interest rates;

our degree of leverage could make us more vulnerable to downturns in general economic conditions;

our ability to plan for, or react to, changes in our business and the industry in which we operate may be limited; and

our ability to obtain additional financing on satisfactory terms to fund our working capital requirements, capital expenditures, investments, debt service requirements and other general corporate requirements may be reduced.

**Table of Contents**

In addition, our revolving credit facility and second lien term loan agreement contain a number of significant covenants that place limitations on our activities and operations, including those relating to:

creation of liens;

hedging;

mergers, acquisitions, asset sales or dispositions;

payments of dividends;

incurrence of additional indebtedness; and

certain leases and investments outside of the ordinary course of business.

Our credit agreements require us to maintain compliance with specified financial ratios and satisfy certain financial condition tests. Our ability to comply with these ratios and financial condition tests may be affected by events beyond our control, and we cannot assure you that we will meet these ratios and financial condition tests. These financial ratio restrictions and financial condition tests could limit our ability to obtain future financings, make needed capital expenditures, withstand a future downturn in our business or the economy in general or otherwise conduct necessary or desirable corporate activities.

A breach of any of these covenants or our inability to comply with the required financial ratios or financial condition tests could also result in a default under our credit agreements. A default, if not cured or waived, could result in all of our indebtedness becoming immediately due and payable. If that should occur, we may not be able to pay all such debt or to borrow sufficient funds to refinance it. See Management's Discussion and Analysis of Financial Condition and Results of Operations Liquidity and Capital Resources Capital resources for further information regarding future compliance with these covenants. Even if new financing were then available, it may not be on terms that are acceptable to us. See: Recent market events and conditions, including disruptions in the U.S. and international credit markets and other financial systems and the deterioration of the U.S. and global economic conditions, could, among other things, impede access to capital or increase the cost of capital, which would have an adverse effect on our ability to fund our working capital and other capital requirements and Our development and exploration operations, including on our East Texas resource play acreage, require substantial capital, and we may be unable to obtain needed capital or financing on satisfactory terms, which could lead to a loss of properties and a decline in our natural gas, crude oil and natural gas liquids reserves.

***Changes to current laws may affect our ability to take certain deductions.***

Substantive changes to the existing federal income tax laws have been proposed that, if adopted, would affect, among other things, our ability to take certain deductions related to our operations, including depletion deductions, deductions for intangible drilling and development costs and deductions for United States production activities. These changes, if enacted into law, could negatively affect our financial condition and results of operations.

***Our ability to use our net operating loss carryforwards may be subject to limitation and may result in increased future tax liability to us.***

Generally, a change of more than 50% in the ownership of a corporation's stock, by value, over a three-year period constitutes an ownership change for U.S. federal income tax purposes. An ownership change may limit a company's

ability to use its net operating loss carryforwards attributable to the period prior to such change. The number of shares of common stock that we issue in connection with this offering may be sufficient, taking into account prior or future shifts in our ownership over a three-year period, to cause us to undergo an ownership change. As a result, if we earn net taxable income, our ability to use our pre-change net operating loss carryforwards to offset U.S. federal taxable income may become subject to limitations, which could potentially result in increased future tax liability to us. In addition, the carrying value of any tax asset related to our net operating loss carryforwards could be significantly reduced.

**Table of Contents**

**CAUTIONARY STATEMENT CONCERNING FORWARD-LOOKING STATEMENTS**

We make forward-looking statements throughout this prospectus within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

These forward-looking statements include, but are not limited to, statements regarding:

estimates of proved reserve quantities and net present values of those reserves;

estimates of probable and possible reserve quantities;

reserve potential;

business strategy;

estimates of future commodity prices;

amounts, timing and types of capital expenditures and operating expenses;

expansion and growth of our business and operations;

expansion and development trends of the oil and gas industry;

acquisitions of natural gas and crude oil properties;

production of crude oil and natural gas reserves;

exploration prospects;

wells to be drilled and drilling results;

operating results and working capital; and

future methods and types of financing.

Whenever you read a statement that is not simply a statement of historical fact (such as when we describe what we believe, expect or anticipate will occur, and other similar statements), you must remember that our expectations may not be correct, even though we believe they are reasonable. We caution that a number of factors could cause future production, revenues and expenses to differ materially from our expectations. We do not guarantee that the transactions and events described in this prospectus will happen as described (or that they will happen at all). The forward-looking information contained in this prospectus is generally located in the material provided under the headings Business, Risk Factors, and Management's Discussion and Analysis of Financial Condition and Results of Operations but may be found in other locations as well. These forward-looking statements generally relate to our plans and objectives for future operations and are based upon our management's reasonable estimates of future results and trends. For a discussion of risk factors affecting our business, see Risk Factors.

**Table of Contents**

**USE OF PROCEEDS**

We estimate that our net proceeds from the sale of shares of our common stock in this offering, after deducting underwriting discounts and commissions and estimated offering expenses, will be approximately \$ million, assuming an offering price of \$ per share, which is the midpoint of the range provided on the cover page of this prospectus.

We intend to use the net proceeds from this offering to repay approximately \$ million in aggregate principal amount of loans outstanding under our revolving credit facility and \$10 million in aggregate principal amount of indebtedness under our \$10 million unsecured promissory note due to Wells Fargo Bank, National Association. At November 6, 2009 and after application of proceeds from our \$10 million unsecured promissory note, we had \$129.5 million of indebtedness outstanding under our revolving credit facility. This indebtedness matures on May 8, 2011, and at November 6, 2009 had a weighted average interest rate of 3.76% per annum. The indebtedness under our \$10 million unsecured promissory note bears interest at a rate per annum equal to two-month LIBOR plus 2% and matures on January 15, 2010. For a description of our revolving credit facility and our \$10 million unsecured promissory note, please see Management's Discussion and Analysis of Financial Condition and Results of Operations Liquidity and Capital Resources Capital resources.

A \$1.00 increase (decrease) in the assumed initial public offering price of \$ per share would increase (decrease) the net proceeds from this offering by approximately \$ million, assuming no change in the number of shares offered by us as included on the cover page of this prospectus and after deducting the estimated underwriting discounts and commissions and estimated offering expenses payable by us.

**DIVIDEND POLICY**

We have never declared or paid cash dividends on our common stock or our preferred stock. Each share of our Series G Preferred Stock is entitled to a quarterly cash dividend, if, as and when declared, that cumulates and compounds quarterly whether or not dividends in a quarter are declared or paid, equal to 8% per annum based on the then-current liquidation preference. Dividends on our Series G Preferred Stock have accumulated since 2005, but have not been declared or paid. As of September 30, 2009, accumulated dividends on the Series G Preferred Stock (which may be converted into shares of our common stock at the current \$9.00 conversion price) equaled approximately \$17.7 million. Although we have not, and are not required to, pay a cash dividend on our Series H Preferred Stock, we have paid a quarterly dividend of one share of our common stock (as adjusted for our 1-for-10 reverse stock split in September 2006) on our outstanding shares of Series H Preferred Stock, as required by its Certificate of Designations, since 2005. The provisions of our revolving credit facility, second lien term loan agreement and preferred stock restrict the payment of dividends. We currently intend to retain all available funds and any future earnings for use in the operation of our business and to fund future growth. We do not anticipate paying any cash dividends on our common stock in the foreseeable future.

**Table of Contents****CAPITALIZATION**

The following table sets forth cash and cash equivalents and capitalization as of September 30, 2009:

on a historical basis;

on a pro forma basis to give effect to the Preferred Stock Conversion, the issuance of \$12 million in aggregate principal amount of indebtedness under our unsecured promissory notes and the repayment of loans under our revolving credit facility with proceeds of one of such promissory notes; and

on a pro forma basis as further adjusted to give effect to this offering and the application of the estimated net proceeds of this offering.

This table should be read together with Use of Proceeds, Selected Historical Consolidated Financial Data, Management's Discussion and Analysis of Financial Condition and Results of Operations and the consolidated financial statements and notes to those statements, in each case, included elsewhere in this prospectus.

	<b>As of September 30, 2009</b>		
	<b>Historical</b>	<b>Pro Forma</b>	<b>Pro Forma As Further Adjusted<sup>(1)</sup></b>
	<i>(In thousands, except per share data)</i>		
Cash and cash equivalents	\$	\$	\$

- (1) A \$1.00 increase (decrease) in the assumed initial public offering price per share would decrease (increase) long-term debt, including current maturities, by \$ million and increase (decrease) each of additional paid-in capital and total stockholders' equity by \$ million, assuming the number of shares offered by us, as set forth on the cover page of this prospectus, remains the same.
- (2) As of November 6, 2009, and after application of proceeds from our \$10 million unsecured promissory note, we had \$129.5 million in aggregate indebtedness outstanding under our revolving credit facility. After this offering, we expect that we will have \$ million in available borrowing capacity under our revolving credit facility.

**Table of Contents****MARKET FOR OUR COMMON STOCK**

Our common stock is traded on the Over-the-Counter Bulletin Board (the OTCBB ) under the symbol CXPO.OB. We have applied to list our common stock on the NASDAQ Global Market under the symbol CXPO.

As of , 2009, the last reported sales price of our common stock on the OTCBB was \$ per share of common stock and there were shares of our common stock outstanding held by approximately holders of record. The following table sets forth the range of high and low bid quotation prices per share of our common stock as reported by the OTCBB. The quotations reflect inter-dealer prices, without retail mark-up, mark-down or commissions, and may not represent actual transactions.

	Range of Reported High and Low Bid Quotations <sup>(1)</sup>		Average Daily Trading Volume
	High	Low	
<b>2006</b>

Fourth Quarter (through November , 2009)	\$	\$	

<sup>(1)</sup> In September 2006, we effected a reverse stock split where each ten shares of outstanding common stock were exchanged for one new share of common stock. All periods presented have been adjusted to reflect the effects of the reverse stock split.

**Table of Contents****SELECTED HISTORICAL CONSOLIDATED FINANCIAL DATA**

The following table sets forth our selected historical consolidated financial data as of the dates and for the periods indicated. The selected historical consolidated financial data as of December 31, 2004, 2005, 2006, 2007 and 2008 and for each of the five years in the period ended December 31, 2008 have been derived from our audited consolidated financial statements and related notes included elsewhere in this prospectus. The historical consolidated financial data for the nine months ended September 30, 2008 and 2009 have been derived from our unaudited consolidated financial statements and, in the opinion of our management, have been prepared on a basis consistent with our audited consolidated financial statements and reflect all adjustments, consisting of normal recurring adjustments necessary for a fair presentation of the financial position and results of operations for the periods presented. The consolidated results of operations for any period are not necessarily indicative of the results to be expected for any future period. The selected historical consolidated financial data provided below should be read in conjunction with, and are qualified by reference to, Management's Discussion and Analysis of Financial Condition and Results of Operations and the consolidated financial statements and related notes thereto included elsewhere in this prospectus.

- (1) For the year ended December 31, 2008, includes (i) an impairment expense of \$10.2 million in December 2008 with respect to our Grand Lake Field in Southwest Louisiana, resulting from negative reserve revisions resulting from low year end low commodity prices, and (ii) \$25.8 million in asset impairments in the nine months ended September 30, 2008 resulting from our capital investment in the Rodessa formation within the Madisonville Field.
- (2) For the year ended December 31, 2008 and the nine months ended September 30, 2008, includes a gain of \$15.6 million resulting from the disposition of our interest in the Barnett Shale Play in January 2008.
- (3) Non-cash equity-based compensation charges were \$5.4 million, \$4.7 million and \$3.8 million, in 2008, 2007 and 2006, respectively. Non-cash equity-based compensation charges were \$4.5 million and \$1.9 million for the nine months ended September 30, 2009 and 2008, respectively. For the nine months ended September 30, 2009 and 2008, this expense was \$1.9 million and \$4.5 million, respectively.
- (4) Adjusted EBITDAX is a non-GAAP financial measure. Our definition of Adjusted EBITDAX and a reconciliation of net income (loss) to Adjusted EBITDAX is provided under Prospectus Summary Non-GAAP Financial Measures and Reconciliations.
- (5) Other capital expenditures consists primarily of capital drilling and lease acquisitions.

**MANAGEMENT'S DISCUSSION AND ANALYSIS OF  
FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

*You should read the following discussion of our results of operations and financial condition with the Selected Historical Consolidated Financial Data and the historical financial statements and related notes included elsewhere in this prospectus. This discussion contains forward-looking statements and involves numerous risks and uncertainties, including, but not limited to, those described in the Risk Factors section of this prospectus. Actual results may differ materially from those contained in any forward-looking statements.*

**Overview**

Crimson is an independent energy company engaged in the acquisition, exploitation, exploration and development of natural gas and crude oil properties. We have historically focused our operations in the onshore U.S. Gulf Coast and South Texas regions, which are generally characterized by high rates of return in known, prolific producing trends. We have recently expanded our strategic focus to include longer reserve life resource plays that we believe provide significant long-term growth potential in multiple formations.

In late 2008 and early 2009, we acquired approximately 12,000 net acres in East Texas where we completed our first well, the Kardell #1H, in October 2009. This well targeted the Haynesville Shale and initially produced 30.7 MMcfe/d, which we believe to be the highest publicly announced initial production rate to date in that formation. In addition to the Haynesville Shale, we believe this acreage is equally prospective in the Bossier Shale and James Lime formations where industry participants have drilled successful wells on adjacent acreage.

In 2007, we acquired approximately 2,800 net acres in South Texas, which we believe is prospective in the Austin Chalk and the Eagle Ford Shale. We drilled our first well on this acreage, the Dubose #1, during the fourth quarter of 2009, and we are preparing to complete the well in the Eagle Ford Shale.

We intend to grow reserves and production by developing our existing producing property base, developing our East Texas and South Texas resource potential, and pursuing opportunistic acquisitions in areas where we have specific operating expertise. We have developed a significant project inventory of over 800 drilling locations associated with our existing property base. Our technical team has a successful track record of adding reserves through the drillbit. Since January 2008, we have drilled 34 gross (15.2 net) wells with an overall success rate of 91% (excluding one well which has not yet been completed).

As of December 31, 2008, our estimated proved reserves, as prepared by our independent reserve engineering firm, Netherland, Sewell & Associates, Inc., were 131.9 Bcfe, consisting of 96.2 Bcf of natural gas and 6.0 MMBbl of crude oil, condensate and natural gas liquids. As of December 31, 2008, 73% of our proved reserves were natural gas, 69% were proved developed and 81% were attributed to wells and properties operated by us. From 2006 to 2008, we grew our estimated proved reserves from 46.4 Bcfe to 131.9 Bcfe. In addition, we grew our average daily production from 7.3 MMcfe/d for the year ended December 31, 2006 to 43.0 MMcfe/d for the nine months ended September 30, 2009. For the nine months ended September 30, 2009, we generated \$55.2 million of Adjusted EBITDAX. Our definition of the non-GAAP financial measure of Adjusted EBITDAX and a reconciliation of net income (loss) to Adjusted EBITDAX are provided under Prospectus Summary Non-GAAP Financial Measures and Reconciliations. For the same period, our net income (loss) was \$(16.8) million.

**Recent Developments**

*East Texas Acreage Acquisition*

In the second half of 2008 and early 2009, we obtained natural gas and crude oil leases from mineral interest owners covering approximately 17,000 gross (12,000 net) acres in the natural gas

## **Table of Contents**

resource play in East Texas specifically in San Augustine and Sabine Counties. We commenced our first well (the Kardell #1H), in which we owned a 52% working interest, in this play in late June 2009 and completed that well in October 2009. The well had a measured depth of approximately 18,350 feet and was a successful test of the Haynesville Shale formation. The initial 24-hour production experienced from the Kardell #1H well in early November 2009 was 30.7 MMcfe/d (12.0 MMcfe/d net to our interest). We plan to continue to pursue an active drilling program in this area for the next several years, targeting primarily the Haynesville Shale, the Bossier Shale and the James Lime formations. We financed the acquisition of this acreage with cash flows from operations and from borrowings available under our revolving credit facility.

### ***Smith Acquisition***

In May 2008, we acquired four producing gas fields and undeveloped acreage in South Texas from Smith Production Inc. ( Smith ) for a purchase price of \$65.0 million with an economic effective date of January 1, 2008. After adjustment for the estimated results of operations, and other typical purchase price adjustments of approximately \$7.4 million for the period between the effective date and the closing date, the cash consideration was approximately \$57.6 million. The assets acquired consist of a 25% non-operated working interest in the Samano Field located in Starr and Hidalgo Counties, a 100% operated working interest in the North Bob West Field in Zapata County and 100% operated working interests in the Brushy Creek and Hope Fields in DeWitt County. We acquired an interest in over 16,000 gross acres with these fields, most of which is held by production. Production from the acquired assets was averaging approximately 7 MMcfe/d at closing, which resulted in a 13% increase in our then current net daily production.

The adjusted price for this acreage, with adjustment of the reserves for approximately one Bcfe of production for the interim operations between the effective date and closing, represents a purchase cost of \$2.82 per Mcfe for approximately 21 Bcfe of proved reserves and \$8,300 per Mcfe of current average daily production. We financed this acquisition with cash flows from operations, proceeds from the sale of assets and from borrowings available under our revolving credit facility. For the year ended December 31, 2008, seven months of revenues and expenses, \$11.7 million and \$3.7 million, respectively, were included in our financial results of operations.

### ***Barnett Shale Disposition***

In January 2008, we and our operator-partner entered into a series of agreements to sell our interests in wells and undeveloped acreage in the Fort Worth Barnett Shale Play in Johnson and Tarrant Counties, Texas to another industry participant active in that area. We owned a 12.5% non-operated working interest in the assets being sold and had 1.5 Bcfe in proved reserves at December 31, 2007. The total consideration paid by the buyer was based on existing wells and undeveloped acreage owned by us and our partner at the time of the final closing. Our share of the consideration received was approximately \$34.4 million. Proceeds received for our interest were primarily used to repay amounts outstanding under our revolving credit facility and to help finance our acquisition of the properties from Smith. Our net book value of the assets sold was \$18.8 million, which resulted in a gain of \$15.6 million.

### ***Promissory Notes***

On November 6, 2009, we issued an unsecured promissory note in the aggregate principal amount of \$10.0 million to Wells Fargo Bank, National Association and an unsecured subordinated promissory note in the aggregate principal amount of \$2.0 million to Oaktree Holdings, our majority stockholder. See Liquidity and Capital Resources Capital resources.

## **Table of Contents**

### **Selected Factors That Affect Our Operating Results**

Our revenue, cash flow from operations and future growth depend substantially upon the prices and demand for natural gas, crude oil and natural gas liquids, the quantity of our natural gas, oil and natural gas liquids production and changes in the fair value of derivative instruments we use to reduce the volatility of the prices we receive for our natural gas, oil and natural gas liquids production. Crude oil and natural gas prices have historically been volatile and may fluctuate widely in the future. Even relatively modest drops in prices can significantly affect our financial position and results of operations, the value of our reserves, the quantities of crude oil and gas that we can economically produce and our ability to access capital.

*Commodity Prices.* Commodity prices have been volatile over the past several years. Significant factors that will impact near-term commodity prices include the following:

the domestic and foreign supply of and demand for crude oil and natural gas;

the level of consumer product demand;

weather conditions;

political and economic conditions and events in foreign oil and gas producing countries, including those in the Middle East, South America and Russia;

actions of the Organization of Petroleum Exporting Countries and state-controlled oil companies relating to oil price and production controls;

technological advances affecting energy consumption and supply;

domestic and foreign governmental regulations and taxation;

the impact of energy conservation efforts;

the proximity, capacity, cost and availability of oil and gas pipelines and other transportation facilities to our production, and access to readily available alternatives in the event of disruptions in such pipelines or facilities; and

the price and availability of alternative fuels.

Prior to mid-2008, the oil and gas industry saw significant increases in activity resulting from high commodity prices for natural gas, crude oil and natural gas liquids. However, since mid-2008 commodity prices have declined significantly, which has adversely affected our results of operations. Supply and geopolitical uncertainties resulted in significant price volatility during 2008 with oil prices rising during the first half of the year to record levels before falling by approximately 68% during the second half of the year. Commodity prices, particularly gas prices, continued to decline during the first quarter of 2009. Spot prices for West Texas Intermediate (WTI) oil averaged \$99.92/Bbl during 2008, with a low price of \$31.41/Bbl in December 2008 and a high price of \$145.29/Bbl in July 2008. During 2008, the gas market continued to be driven by high storage inventories and mild weather conditions across much of the country. Spot prices for Henry Hub gas averaged \$8.89/MMbtu for the year, with a low price of \$5.38/MMbtu in December 2008 and a high price of \$13.31/MMbtu in July 2008. Spot prices for WTI oil averaged \$68.14/Bbl and Henry Hub gas averaged \$3.17/MMbtu during the third quarter of 2009. The NYMEX futures prices for oil and gas were \$44.60/Bbl and \$5.62/MMbtu at December 31, 2008 and \$77.00/Bbl and \$5.05/MMbtu at October 30, 2009. The

current global recession has had a significant impact on commodity prices and our operations. If commodity prices remain depressed or decline further, this could negatively affect our ability to execute our growth strategy and generate cash flows. See Risk Factors Natural gas, crude oil and natural gas liquids prices are volatile, and a decline in prices can significantly affect our financial results and impede our growth and Recent changes in the financial and credit markets may impact economic growth and natural gas, crude oil and natural gas liquids prices may continue to be adversely affected by general economic conditions.

**Table of Contents**

*Reserves.* As is typical for businesses engaged in the exploration and production of crude oil and natural gas, we face the challenge of natural production declines. As initial reservoir pressures are depleted, natural gas, crude oil and natural gas liquids production from a given well decreases. Thus, unless we conduct successful development, exploitation and exploration activities or acquire properties containing proved reserves, our proved reserves will decline as they are produced. Our future natural gas, crude oil and natural gas liquids reserves and production, and therefore our cash flow and results of operations, are highly dependent on our success in efficiently developing and exploiting our current reserves and economically finding or acquiring additional recoverable reserves.

As of December 31, 2008, we had 131.9 Bcfe of estimated net proved reserves with an associated PV-10 of \$291.0 million, representing an increase in reserves of 1.7 Bcfe from December 31, 2007, and an increase in reserves of 85.6 Bcfe from December 31, 2006, resulting primarily from our May 2007 acquisition of properties ( STGC Properties ) from EXCO Resources, Inc. ( EXCO ). For a discussion of PV-10 and a reconciliation to Standardized Measure of Discounted Net Cash Flows, see Prospectus Summary Non-GAAP Financial Measures and Reconciliations. Based on our internal estimates, we believe that our proved reserves as of September 30, 2009 compared to December 31, 2008 have declined for a number of reasons, many of which are beyond our control. During the first nine months of 2009, declining commodity prices, reductions in production enhancing capital expenditures, as well as capital expenditures associated with our exploitation and development activities contributed to a decline in our proved reserves from December 31, 2009, as have normal production, operations, and certain property sales made throughout 2009. Estimates of net proved reserves are inherently imprecise. In addition, approximately 31% of our total estimated proved reserves at December 31, 2008 were undeveloped. By their nature, estimates of undeveloped reserves are less certain than proved developed reserves. Recovery of such reserves will require significant capital expenditures and successful drilling operations. See Risk Factors Reserve estimates depend on many assumptions that may turn out to be inaccurate. Any material inaccuracies in these reserve estimates or underlying assumptions could materially reduce the estimated quantities and present value of our reserves. Our level of exploratory capital expenditures for the majority of 2009 was limited due to low commodity prices and limited access to the capital markets, and we deferred major capital allocation for drilling opportunities during the year.

*Revenues and Production.* Our revenues, net of the realized effects of our hedging instruments, decreased to \$85.7 million in the nine months ended September 30, 2009 from \$151.0 million in the nine months ended September 30, 2008, a decrease of 43.2%, due to an approximate 20% decrease in production and an approximate 29% decline in realized commodity prices. Revenues, net of the realized effects of our hedging instruments, decreased to \$26.7 million for the three months ended September 30, 2009 from \$53.1 million for the three months ended September 30, 2008, due to an approximate 29% decrease in production and an approximate 29% decline in realized commodity prices. In the nine month period ended September 30, 2009 our production was 11.7 Bcfe as compared to 14.6 Bcfe for the nine months ended September 30, 2008, or a decrease of 19.6%. This decrease was primarily due to natural field decline and limited production enhancing capital expenditure activity in the first nine months of 2009. On a daily basis, we produced an average of 43.0 MMcfe/d in the first nine months of 2009 compared to an average of 53.3 MMcfe/d in the first nine months of 2008. In the three month period ended September 30, 2009, our production decreased by 1.5 Bcfe, to 3.5 Bcfe from 5.0 Bcfe for the third quarter of 2009, or 30%, primarily due to natural field decline and limited production enhancing capital expenditure activity during 2009. On a daily basis, we produced an average of 38.3 MMcfe/d for the third quarter of 2009 compared to an average of 54.1 MMcfe/d for the third quarter of 2008.

For the year ended December 31, 2008, revenues, net of the realized effects of our hedging instruments, increased to \$185.7 million from \$109.2 million in 2007 and from \$21.5 million in 2006. The increase in 2008 compared to 2007 was primarily due to increases in net realized commodity prices, the success experienced in our drilling program, the full-year effect of our May 2007 acquisition of the STGC Properties from EXCO and the seven-month effect of the May 2008 South Texas

**Table of Contents**

acquisition from Smith, offset by lost production and natural gas liquids not processed, due to Hurricanes Gustav and Ike. Production volumes increased to 19.2 Bcfe in 2008 from 13.2 Bcfe in 2007, representing a 6.0 Bcfe, or 45.2%, increase. Realized prices (net of hedges) were \$9.66 per Mcfe in 2008 as compared to \$8.25 in 2007. The increase in revenues in 2007 compared to 2006 was primarily due to our acquisition of the STGC Properties from EXCO in May of 2007. Production volumes increased approximately 399.2% during 2007 as compared to 2006 with average daily volumes of 36,264 Mcfe in 2007 compared to an average of 7,265 Mcfe in 2006.

*Derivative Instruments.* To achieve more predictable cash flow and to reduce our exposure to adverse fluctuations in commodity prices, we generally enter into derivative arrangements for a significant portion of our natural gas, crude oil and natural gas liquids production. See *Quantitative and Qualitative Disclosures About Market Risk* *Commodity Price Risk* and *Derivative Instruments*. While these derivative contracts will protect us when market prices are below our contract prices, they also prevent us from realizing an increase in cash flow when market prices are higher than our contract prices. We will sustain realized and unrealized losses to the extent our contract prices are lower than market prices and conversely, we will sustain realized and unrealized gains to the extent our contract prices are higher than market prices. Our derivatives contracts are not designated as accounting hedges and, as a result, gains or losses on derivatives contracts are recorded as an other expense. Internally, our management views the settlement of such derivatives contracts as adjustments to the price received for natural gas, crude oil and natural gas liquids production to determine realized prices.

Net of the realized effect of our hedging agreements, the price received for natural gas for the nine month period ended September 30, 2009 was \$6.77 per Mcf, the price received for crude oil was \$81.46 per Bbl, and the price received for natural gas liquids was \$27.19 per Bbl, or \$7.31 per Mcfe on a combined equivalent basis. Before the realized effect of our hedges, the price received for natural gas for the nine month period ended September 30, 2009 was \$3.92 per Mcf, the price received for crude oil was \$52.80 per Bbl, and the price received for natural gas liquids was \$27.19 per Bbl, or \$4.68 per Mcfe on a combined equivalent basis.

We realized gains of \$7.6 million on our crude oil hedges and \$23.2 million on our natural gas hedges in the first nine months of 2009, compared to realized losses of \$9.4 million for crude oil hedges and \$3.8 million for natural gas hedges in the first nine months of 2008. During the nine month period ended September 30, 2009, we reported a \$17.2 million non-cash unrealized loss on our derivatives positions compared to \$1.7 million non-cash unrealized gain for the same period of 2008. We realized losses of \$8.5 million on our crude oil hedges and \$0.8 million on our natural gas hedges in 2008, compared to realized losses of \$3.4 million for crude oil hedges and realized gains of \$6.4 million for natural gas hedges in 2007, and a loss of \$0.8 million for crude oil hedges and a realized gain of \$0.2 million for natural gas hedges in 2006. During 2008, we reported a non-cash unrealized gain of \$49.4 million compared with a non-cash unrealized loss of \$18.2 million for 2007, and a \$6.1 million non-cash unrealized gain for 2006. Unrealized gains or losses on derivative contracts represent the change in fair value of open derivative positions during the period. The change in fair value is principally measured based on period end prices as compared to the contract price. Future volatility in natural gas, crude oil and natural gas liquids prices could have an adverse effect on the operating results of our results of operations.

*Operating Expenses.* In evaluating our operations, we frequently monitor and assess our operating expenses, in terms of absolute dollars and on a per Mcfe basis. We believe that this measure allows us to better evaluate our operating efficiency and is used by us in reviewing the economic feasibility of a potential acquisition or development project. Operating expenses are the costs incurred in the operation of producing properties. Expenses for utilities, direct labor, water injection and disposal, production taxes and materials and supplies comprise the most significant portion of our operating expenses. A majority of our operating cost components are variable and increase or decrease as the level of production increases or decreases. Certain items, however, such as direct labor and

## **Table of Contents**

materials and supplies, generally remain relatively fixed and do not fluctuate with changes in production volumes, but can fluctuate depending on activities performed during a specific period.

Our decrease in revenues for the nine months ended September 30, 2009 was offset by a decrease in our operating expenses, primarily due to the implementation of cost reduction initiatives in 2009 in response to a lower commodity price environment and lower production and realized prices in 2009. However, our exploration expense increased by \$1.0 million, or 52.6%, from \$1.9 million for the nine months ended September 30, 2008 to \$2.9 million for the nine months ended September 30, 2009, primarily due to higher geological and geophysical costs, abandoned property, lease rentals and settled asset retirement costs incurred in the first nine months of 2009. Similarly, depreciation, depletion and amortization ( DD&A ) increased from \$36.0 million for the nine months ended September 30, 2008 to \$41.6 million for the nine months ended September 30, 2009, primarily due to a higher DD&A rate resulting from the effect of negative price-related revisions, partially offset by lower production in 2009.

The increase in our revenue for 2008 as compared to 2007 was offset by an increase of \$47.8 million, or 66.2%, in our operating expenses, primarily due to increased costs and expenses resulting from the acquisition of properties from EXCO and Smith and higher production and realized prices. Similarly, the increase in our revenue for 2007 as compared to 2006 was offset by an increase of \$51.3 million, or 245.5%, in our operating expenses, primarily due to increased costs and expenses resulting from the acquisition of the STGC properties from EXCO.

After application of approximately \$     in net proceeds from this offering (estimated based upon the midpoint of the range of the offering price on the cover of this prospectus), we expect to have approximately \$     million of available borrowing capacity under our revolving credit facility to pursue our 2010 drilling program. Our 2010 capital budget is approximately \$55 million, exclusive of acquisitions, of which we expect to spend approximately 76% of our budget on our East Texas and South Texas resource plays and 24% on our existing producing assets. We plan to drill 12 gross (6.0 net) wells in 2010, including 7 gross (3.0 net) wells on our East Texas resource play acreage, one gross (0.4 net) well on our South Texas resource play acreage, and 4 gross (2.6 net) wells in Liberty County. The actual number of wells drilled and the amount of our 2010 capital expenditures will depend on market conditions, commodity prices, availability of capital and drilling and production results. We cannot assure you that our exploration and development activities will result in increases in our proved reserves.

## **Results of Operations**

The following discussion is of our consolidated results of operations, financial condition and capital resources. You should read this discussion in conjunction with our Consolidated Financial

**Table of Contents**

Statements and the Notes thereto contained elsewhere in this prospectus. Comparative results of operations for the periods indicated are discussed below.

***Nine Months Ended September 30, 2009 Compared to Nine Months Ended September 30, 2008****Revenues*

	<b>Nine Months Ended September 30,</b>			<b>Percent</b>
	<b>2009</b>	<b>2008</b>	<b>Change</b>	<b>Change</b>
	<i>(In millions, except percentages)</i>			
Revenues:				
Natural gas sales	\$ 55.1	\$ 92.1	\$ (37.0)	-40.2%
Crude oil sales	21.5	34.2	(12.7)	-37.1%
Natural gas liquids sales	9.1	24.7	(15.6)	-63.2%
Product revenues	\$ 85.7	\$ 151.0	\$ (65.3)	-43.2%

*Natural Gas, Crude Oil and Natural Gas Liquids Sales.* Revenues from the sale of natural gas, crude oil and natural gas liquids, net of the realized effects of our hedging instruments, were \$85.7 million for the first nine months of 2009 compared to \$151.0 million for the first nine months of 2008 due to an approximate 20% decrease in production and an approximate 29% decline in realized commodity prices.

	<b>Nine Months Ended September 30,</b>			<b>Percent</b>
	<b>2009</b>	<b>2008</b>	<b>Change</b>	<b>Change</b>
Sales (production) volumes:				
Natural gas (Mcf)	8,142,588	9,752,667	(1,610,079)	-16.5%
Crude oil (Bbl)	264,170	385,458	(121,288)	-31.5%
Natural gas liquids (Bbl)	334,303	422,107	(87,804)	-20.8%
Natural gas equivalents (Mcf)	11,733,426	14,598,057	(2,864,631)	-19.6%

Production was approximately 11.7 Bcfe for the first nine months of 2009 compared to approximately 14.6 Bcfe for the first nine months of 2008. On a daily basis, we produced an average of 43.0 MMcfe/d in the first nine months of 2009 compared to an average of 53.3 MMcfe/d in the first nine months of 2008. Production volumes decreased primarily due to natural field decline and limited production-enhancing capital expenditure activity in the first nine months of 2009.

	<b>Nine Months Ended September 30,</b>			<b>Percent</b>
	<b>2009</b>	<b>2008</b>	<b>Change</b>	<b>Change</b>
Average sales prices (before hedging):				

Edgar Filing: CRIMSON EXPLORATION INC. - Form S-1

Natural gas (Mcf)	\$ 3.92	\$ 9.83	\$ (5.91)	-60.1%
Crude oil (Bbl)	52.80	112.98	(60.18)	-53.3%
Natural gas liquids (Bbl)	27.19	58.49	(31.30)	-53.5%

Selected costs	\$ 6.60	\$ 5.85	\$ 0.75	12.8%

- (1) Total general and administrative costs include share-based compensation on the Consolidated Statements of Operations.

*Lease Operating Expenses.* Lease operating expenses for the first nine months of 2009 were \$13.5 million, compared to \$15.4 million in the first nine months of 2008, a decrease primarily due to the implementation of cost reduction initiatives in 2009 in response to the lower commodity price environment, offset by the incremental costs in 2009 related to producing properties acquired from Smith at the end of May 2008.

*Production and Ad Valorem Tax Expenses.* Production and ad valorem tax expenses for the first nine months of 2009 were \$6.1 million, compared to \$14.4 million for the first nine months of 2008, due to lower production and lower realized prices in 2009 and state tax credits net to us of

**Table of Contents**

\$0.4 million as a result of our focus on maximizing allowable deductions and opportunities for tax relief for prior periods.

*Exploration Expenses.* Exploration expenses were \$2.9 million in the first nine months of 2009 compared to \$1.9 million for the first nine months of 2008. The increase in exploration expenses was primarily due to higher geological and geophysical costs, abandoned property, lease rentals and settled asset retirement costs incurred in the first nine months of 2009.

*Depreciation, Depletion and Amortization.* DD&A expense for the first nine months of 2009 was \$41.6 million compared to \$36.0 million for the first nine months of 2008, primarily due to a higher DD&A rate resulting from the effect of negative price related reserve revisions, partially offset by lower production in 2009.

*Impairment of Oil and Gas Properties.* Impairment expense for the first nine months of 2009 was zero compared to \$25.8 million for the first nine months of 2008. The 2008 impairment relates primarily to our capital investment made in pursuing the Rodessa formation within the Madisonville Field. Negative performance-related reserve revisions, including the abandonment of the Rodessa formation in the Johnston 2U well, triggered an evaluation of the Madisonville Field for impairment purposes. Given the high original cost of drilling and developing the field and the high cost of producing and processing sour gas, combined with lower commodity prices, our evaluation resulted in the recorded costs of this field exceeding the estimated future undiscounted cash flow of the reserves as of the end of the third quarter 2008.

*General and Administrative ( G&A ) Expenses.* Total G&A expenses were \$13.4 million for the first nine months of 2009 compared to \$17.8 million for the first nine months of 2008, which includes non-cash stock expense of \$1.9 million (\$0.16 per Mcfe) and \$4.5 million (\$0.31 per Mcfe) for the first nine months of 2009 and 2008, respectively. The reduction in G&A expenses is primarily a result of implementing cost reduction initiatives during 2009.

*Gain on Sale of Assets.* We sold minimal assets during the first nine months of 2009, while the gain on the sale of assets in the first nine months of 2008 was \$15.3 million primarily due to the disposition of our interest in the Barnett Shale Play in January 2008.

*Interest Expense.* Interest expense was \$16.3 million for the first nine months of 2009, compared to \$15.9 million for the first nine months of 2008. Total interest expense increased primarily due to higher debt balances and higher interest rates on our second lien term loan agreement. Total interest expense capitalized for the first nine months of 2009 and 2008 was approximately \$25,000 and \$0.8 million, respectively.

*Other Financing Costs.* Other financing costs were \$1.1 million for the first nine months of 2009 compared with \$1.2 million for the first nine months of 2008. These expenses are comprised primarily of the amortization of capitalized costs associated with our credit agreements and to commitment fees related to the unused portion of the credit agreements.

*Unrealized Gain (Loss) on Derivative Instruments.* Unrealized gain or loss on derivative instruments is the change in the mark-to-market exposure under our commodity price hedging contracts and our interest rate swaps. This non-cash unrealized loss for the first nine months of 2009 was \$17.2 million compared with a non-cash unrealized gain of \$1.7 million for the first nine months of 2008. Unrealized gain or loss will vary period to period, and will be a function of hedges in place, the strike prices of those hedges and the forward curve pricing for the commodities and interest rates being hedged.

*Income Taxes.* Our net loss before taxes was \$25.9 million for the first nine months of 2009 compared to net income before taxes of \$40.4 million in the first nine months of 2008. After adjusting for permanent tax differences, we recorded income tax benefit of \$9.1 million for the first nine months of 2009, compared to income tax expense of \$15.1 million for the first nine months of 2008.

**Table of Contents**

*Dividends on Preferred Stock.* Dividends on preferred stock were \$3.4 million for the first nine months of 2009 compared with \$3.2 million in the first nine months of 2008. Dividends in the first nine months of 2009 included approximately \$3.3 million on the Series G Preferred Stock and \$19,565 on the Series H Preferred Stock. Dividends in the first nine months of 2008 included \$3.1 million on the Series G Preferred Stock, and \$78,000 on the Series H Preferred Stock. Until such time as the board of directors declares and pays dividends on our Series G Preferred Stock, dividends shall continue to accumulate. Dividends on our Series H Preferred Stock are declared quarterly by our Board of Directors, and as such, are paid out in shares of our common stock during the following period.

**Year Ended December 31, 2008 Compared to Year Ended December 31, 2007***Revenues*

	Year Ended December 31,			Percent Change
	2008	2007	Change	
	<i>(In millions, except percentages)</i>			
Revenues:				
Natural gas sales	\$ 116.4	\$ 67.9	\$ 48.5	71.4%
Crude oil sales	41.9	27.0	14.9	55.2%
Natural gas liquids sales	27.4	14.3	13.1	91.6%
Product revenues	\$ 185.7	\$ 109.2	\$ 76.5	70.1%

*Natural Gas, Crude Oil and Natural Gas Liquids Sales.* Revenues from the sale of natural gas, crude oil and natural gas liquids, net of the realized effects of our hedging instruments, increased by 70.1%, to \$185.7 million in 2008 compared to \$109.2 million in 2007. The increase in net revenues was primarily due to increases in net realized commodity prices, the success experienced in our drilling program, the full-year effect of the May 2007 acquisition of the STGC Properties and the seven-month effect of the May 2008 South Texas acquisition from Smith, offset by lost production, and natural gas liquids not processed, due to Hurricanes Gustav and Ike.

	Year Ended December 31,			Percent Change
	2008	2007	Change	
Sales (production) volumes:				
Natural gas (Mcf)	\$ 13,135,509	\$ 9,067,777	\$ 4,067,732	44.9%
Crude oil (Bbl)	498,143	408,864	89,279	21.8%
Natural gas liquids (Bbl)	516,352	285,907	230,445	80.6%
Natural gas equivalents (Mcf)	\$ 19,222,479	\$ 13,236,403	\$ 5,986,076	45.2%

For 2008, sales volumes increased approximately 45.2% compared to production in 2007. We had approximately 425,000 Mcfe of production deferred in the third and fourth quarters of 2008 due to Hurricanes Gustav and Ike. On a daily basis we produced an average of 52.5 MMcfe/d in 2008 compared to an average of 36.3 MMcfe/d in 2007.

**Table of Contents**

	<b>Year Ended December 31,</b>			<b>Percent Change</b>
	<b>2008</b>	<b>2007</b>	<b>Change</b>	
Average sales prices (before hedging):				
Natural gas (Mcf)	\$ 8.92	\$ 6.78	\$ 2.14	31.6%
Crude oil (Bbl)	101.13	74.38	26.75	36.0%
Natural gas liquids (Bbl)	53.07	49.92	3.15	6.3%
Natural gas equivalents (Mcf)	10.14	8.02	2.12	26.4%
Average sales prices (after hedging):				
Natural gas (Mcf)	\$ 8.86	\$ 7.48	\$ 1.38	18.4%
Crude oil (Bbl)	84.03	66.09	17.94	27.1%
Natural gas liquids (Bbl)	53.07	49.92	3.15	6.3%
Natural gas equivalents (Mcf)	9.66	8.25	1.41	17.1%

Natural gas, crude oil and natural gas liquids prices are reported net of the realized effect of our hedging agreements. We realized losses of \$8.5 million on our crude oil hedges and \$0.8 million on our natural gas hedges in 2008, compared to realized losses of \$3.4 million for crude oil hedges and realized gains of \$6.4 million for natural gas hedges in 2007.

*Operating Overhead and Other Income.* Revenues from working interest partners increased to \$1.1 million in 2008 compared to \$0.4 million in 2007 due to the increase in administrative overhead fees charged to our partners on the operated acquired properties and the one-time catch up in the third quarter 2008 on overhead billings due to the increase in COPAS rates.

*Costs and Expenses*

	<b>Year Ended December 31,</b>			<b>Percent Change</b>
	<b>2008</b>	<b>2007</b>	<b>Change</b>	

## Selected Costs (\$ per Mcfe):

Lease operating expenses	\$ 1.08	\$ 0.91	\$ 0.17	18.7%
Production and ad valorem taxes	\$ 0.85	\$ 0.88	\$ (0.03)	-3.4%
Exploration expenses	\$ 0.52	\$ 0.24	\$ 0.28	116.7%
Depreciation, depletion and amortization	\$ 2.63	\$ 2.33	\$ 0.30	12.9%
General and administrative expenses	\$ 1.17	\$ 1.10	\$ 0.07	6.4%

*Lease Operating Expenses.* Lease operating expenses for 2008 were \$20.8 million, compared to \$12.0 million in 2007. The increase in lease operating expenses was primarily due to the addition of the STGC Properties and the South Texas properties from the Smith acquisition, increased workovers and general increases in the costs of goods and services in the industry.

**Table of Contents**

*Production and Ad Valorem Tax Expenses.* Production and ad valorem tax expenses for 2008 were \$16.3 million, compared to \$11.7 million in 2007. The increase in production and ad valorem tax expenses was primarily due to higher production and realized prices in 2008.

*Exploration Expenses.* Total exploration expenses were \$10.0 million in 2008 compared to \$3.2 million in 2007. The significant increase in exploration expenses was primarily due to the release and abandonment of the undeveloped leasehold position that we acquired from Core Natural Resources in Culberson County, Texas in 2006 which resulted in leasehold abandonment cost of \$7.1 million in 2008.

*Depreciation, Depletion and Amortization.* DD&A expense for 2008 was \$50.5 million compared to \$30.8 million in 2007, as a result of higher production volumes and a higher DD&A rate.

*Impairment of Oil and Gas Properties.* Impairment expense for 2008 was \$36.0 million compared to \$4.4 million in 2007. In December 2008, we recorded a non-cash impairment expense of \$10.2 million, primarily related to our Grand Lake Field in Southwest Louisiana, resulting from negative reserve revisions related to low commodity prices at year end. In September 2008, we recorded a non-cash impairment expense of \$25.8 million related to the abandonment of the Rodessa formation development in our Madisonville Field in our Southeast Texas Region.

*General and Administrative Expenses.* Our G&A expenses were \$22.4 million for 2008 compared to \$14.5 million in 2007. Included in G&A expense is a non-cash stock expense of \$5.4 million (\$0.28 per Mcfe) and \$4.7 million (\$0.36 per Mcfe) for 2008 and 2007, respectively. G&A expenses increased primarily due to higher personnel costs, higher professional fees and higher office rent expense related to expanding our infrastructure.

*Gain on Sale of Assets.* Gain on the sale of assets for 2008 was \$15.2 million. The net gain on the sale of assets was primarily due to the disposition of our interest in the Barnett Shale Play in the first quarter 2008, which resulted in a gain of \$15.6 million. The gain on the sale of assets in 2007 was \$0.7 million.

*Interest Expense.* Interest expense was \$21.1 million for 2008, up from \$14.9 million in 2007. Total interest expense increased primarily as a result of higher outstanding loan balances on our credit agreements related to our acquisition and drilling activity. Total interest expense capitalized for 2008 and 2007 was \$0.9 million and \$1.3 million, respectively.

*Other Financing Costs.* Other financing costs were \$1.5 million for 2008 compared with \$1.3 million for 2007. These expenses are comprised primarily of the amortization of capitalized costs associated with our current and former credit agreements and to commitment fees related to the unused portion of the credit agreements.

*Unrealized Gain (Loss) on Derivative Instruments.* Unrealized gain or loss on derivative instruments is the change in the mark-to-market exposure under our commodity price hedging instruments and our interest rate swaps. This non-cash unrealized gain for 2008 was \$49.4 million compared with a non-cash unrealized loss of \$18.2 million for 2007. Unrealized gain or loss will vary period to period, and will be a function of the hedges in place, the strike prices of those hedges, and the forward curve pricing of the commodities and interest rates being hedged.

*Income Taxes.* Our net income before taxes was \$72.9 million for 2008 compared to a net loss before taxes of \$0.8 million in 2007. After adjusting for permanent tax differences, we recorded income tax expense of \$26.7 million for 2008, of which \$0.6 million was current tax expense and \$26.1 million was deferred. The income tax benefit of \$0.4 million for 2007 was all deferred.

*Dividends on Preferred Stock.* Dividends on preferred stock were \$4.2 million for 2008 compared with \$4.5 million in 2007. Dividends in 2008 included \$4.1 million on the Series G Preferred Stock and \$0.1 million on the Series H

Preferred Stock. Dividends in 2007 included \$4.3 million on the Series G Preferred Stock, \$0.1 million on the Series H Preferred Stock and \$0.1 million on the Series E

**Table of Contents**

Preferred Stock. All of the Series E Preferred Stock was converted to shares of our common stock in May 2007.

**Year Ended December 31, 2007 Compared to Year Ended December 31, 2006***Revenues*

	Year Ended December 31,			Percent Change
	2007	2006	Change

Total operating expenses	\$ 72.2	\$ 20.9	\$ 51.3	245.5%

	<b>Year Ended December 31,</b>			<b>Percent Change</b>
	<b>2007</b>	<b>2006</b>	<b>Change</b>	
Selected Costs (\$ per Mcfe):				
Lease operating expenses	\$ 0.91	\$ 2.12	\$ (1.21)	-57.1%
Production and ad valorem taxes	\$ 0.88	\$ 0.71	\$ 0.17	23.9%
Exploration expenses	\$ 0.24	\$ 0.25	\$ (0.01)	-4.0%
Depreciation, depletion and amortization	\$ 2.33	\$ 1.52	\$ 0.81	53.3%
General and administrative expenses	\$ 1.10	\$ 3.29	\$ (2.19)	-66.6%

*Lease Operating Expenses.* Lease operating expenses for 2007 were \$12.0 million, compared to \$5.6 million in 2006. The increase was primarily due to the addition of the STGC Properties.

*Production and Ad Valorem Tax Expenses.* Production and ad valorem tax expenses for 2007 were \$11.7 million, compared to \$1.9 million in 2006. The increase in production and ad valorem tax expenses was primarily due to the significant increase in production related to the acquisition of the STGC Properties.

*Exploration Expenses.* Total exploration expenses were \$3.2 million in 2007 compared to \$0.7 million in 2006. Exploration expenses increased primarily as a result of the acquisition of the STGC Properties.

*Depreciation, Depletion and Amortization.* DD&A expense for 2007 was \$30.8 million compared to \$4.0 million in 2006, as a result of our acquisition of the STGC Properties.

*Impairment of Oil and Gas Properties.* Impairment expense was \$4.4 million in 2007, primarily related to impairments on our Turkey Creek and Huff McFaddin properties, and \$3.1 million in 2006, primarily related to our Iola property. Declining performance and lower gas prices at year end were contributing factors in these property impairments.

*General and Administrative Expenses.* Our G&A expenses were \$14.5 million in 2007 compared to \$8.7 million in 2006. Included in G&A expense is non-cash stock expense of \$4.7 million (\$0.36 per Mcfe) and \$3.8 million (\$1.44 per Mcfe) for 2007 and 2006, respectively. The \$5.8 million

## **Table of Contents**

increase was primarily due to higher personnel costs, information technology costs, professional fees and office rent incurred in expanding our infrastructure after the acquisition of the STGC Properties.

*Interest Expense.* Interest expense was \$14.9 million in 2007, up from \$0.1 million in 2006. Total interest increased to \$16.2 million for 2007 because of the higher outstanding balances on our credit agreements related to the STGC Properties acquisition. However, \$1.3 million of that interest, which was related to our Madisonville/Rodessa Prospect, was capitalized in 2007.

*Other Financing Costs.* Other financing costs were \$1.3 million in 2007 compared with \$0.2 million in 2006. These expenses are comprised primarily of the amortization of capitalized costs associated with our current and former credit agreements and to commitment fees related to the unused portion of the credit agreements.

*Unrealized Gain (Loss) on Derivative Instruments.* Unrealized gain or loss on derivative instruments is the change in the mark-to-market exposure under our commodity price hedging instruments and our interest rate swap. This non-cash unrealized loss for 2007 was \$18.2 million compared with a non-cash unrealized gain of \$6.1 million for 2006. This amount will vary period to period and will be a function of the hedges in place, the strike prices of those hedges and the forward curve pricing of the commodities and interest rates being hedged.

*Income Taxes.* Our net loss before taxes was \$0.8 million in 2007 compared to net income before taxes of \$3.3 million in 2006. After adjusting for permanent tax differences, we recorded an income tax benefit of \$0.4 million in 2007 and an income tax expense of \$1.4 million in 2006. The income tax benefit/expense was all deferred for both years.

*Dividends on Preferred Stock.* Dividends on preferred stock were \$4.5 million in 2007 compared with \$3.6 million for 2006. Dividends in 2007 included \$4.3 million on the Series G Preferred Stock, \$0.1 million on the Series H Preferred Stock and \$0.1 million on the Series E Preferred Stock. Dividends in 2006 included \$3.2 million on the Series G Preferred Stock, \$0.1 million on the Series H Preferred Stock and \$0.3 million on the Series E Preferred Stock. All of the Series E Preferred Stock was converted to common stock in May 2007.

Prior to the third quarter of 2007, we accumulated undeclared dividends on the Series G Preferred Stock, on a simple or non-compounded basis. During the third quarter, we were notified by the holder of a majority of our outstanding Series G Preferred Stock, Oaktree Holdings, that it believed that the provisions of the Certificate of Designations for the Series G Preferred Stock required compounding dividends. After reviewing its interpretation, and consulting with legal counsel, we and the Oaktree Holdings settled the dispute and agreed to calculate the accrued, undeclared and unpaid dividends on a compounded basis. This new basis for calculating the dividend accrual was documented in a clarification memo between the parties. The change in the method of calculating the accrued, undeclared dividend was a change in accounting estimate necessitated by the new information that became available with the written agreement between the parties in the settlement of the dispute. The net effect of the change in the accounting estimate was an increase of \$0.7 million in preferred stock dividends in the Consolidated Statements of Operations for the year ended December 31, 2007, of which approximately \$0.4 million was related to prior years, and \$0.1 million and \$0.2 million was related to the first and second quarters of 2007, respectively.

## **Critical Accounting Policies**

The discussion and analysis of financial condition and results of our operations are based upon our consolidated financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States. The preparation of these financial statements requires us to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenue and expenses. Certain accounting policies involve judgments and uncertainties to such an extent that there is reasonable likelihood that materially different amounts could have been

reported under different conditions, or if different assumptions had been used. We evaluate such estimates and

## **Table of Contents**

assumptions on a regular basis. We base our estimates on historical experience and various other assumptions that are believed to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates and assumptions used in preparation of our financial statements. Below, we have provided expanded discussion of the more significant accounting policies, estimates and judgments. We believe these accounting policies reflect the more significant estimates and assumptions used in preparation of our financial statements. Please read the notes to our audited consolidated financial statements included in this prospectus for a discussion of additional accounting policies and estimates made by management.

### ***Successful Efforts Method***

We use the successful efforts method of accounting for oil and gas producing activities. Costs to acquire mineral interests in oil and gas properties, to drill and equip exploratory wells that find proved reserves, and to drill and equip development wells are capitalized. Costs to drill exploratory wells that do not find proved reserves, delay rentals and geological and geophysical costs are expensed (except those costs used to determine a drill site location).

### ***Depletion and Depreciation***

We consider depletion and depreciation of oil and gas properties and related support equipment to be critical accounting estimates, based upon estimates of total recoverable natural gas, crude oil and natural gas liquids reserves. The estimates of natural gas, crude oil and natural gas liquids reserves utilized in the calculation of depletion and depreciation are estimated in accordance with guidelines established by the Society of Petroleum Engineers, the SEC and the Financial Accounting Standards Board, which require that reserve estimates be prepared under existing economic and operating conditions with no provision for price and cost escalations over prices and costs existing at year end, except by contractual arrangements. We emphasize that reserve estimates are inherently imprecise. Accordingly, the estimates are expected to change as more current information becomes available. Our policy is to amortize capitalized natural gas, crude oil and natural gas liquids costs on the unit of production method, based upon these reserve estimates. It is reasonably possible that the estimates of future cash inflows, future gross revenues, the amount of natural gas, crude oil and natural gas liquids reserves, the remaining estimated lives of the oil and gas properties, or any combination of the above may be increased or reduced in the near term. If reduced, the carrying amount of capitalized oil and gas properties may be reduced materially in the near term.

### ***Impairments***

We assess all of our properties for possible impairment on an annual basis as a minimum, or as circumstances warrant, based on geological trend analysis, changes in proved reserves or relinquishment of acreage. When impairment occurs, the adjustment is recorded to accumulated depletion. See discussion of impairment expenses in Management's Discussion and Analysis of Financial Condition and Results of Operations.

### ***Asset Retirement Obligations***

We recognize an estimated liability for the plugging and abandonment of our natural gas, crude oil and natural gas liquids wells and associated pipelines and equipment. The liability and the associated increase in the related long-lived asset are recorded in the period in which our asset retirement obligation, or ARO, is incurred. The liability is accreted to its present value each period and the capitalized cost is depreciated over the useful life of the related asset.

The estimated liability is based on historical experience in plugging and abandoning wells, estimated remaining lives of those wells based on reserves estimates and federal and state regulatory requirements. The liability is discounted using an assumed credit-adjusted risk-free rate.

**Table of Contents**

Revisions to the liability could occur due to acquisitions, changes in estimates of plugging and abandonment costs, changes in the risk-free rate or remaining lives of the wells, or if federal or state regulators enact new plugging and abandonment requirements. At the time of abandonment, we recognize a gain or loss on abandonment to the extent that actual costs do not equal the estimated costs.

**Derivative Instruments**

At the end of each reporting period we record on our balance sheet the mark-to-market valuation of our derivative instruments. The estimated change in fair value of the derivatives is reported in Other Income and Expense as unrealized (gain) loss on derivative instruments.

**Recent Accounting Pronouncements**

SEC 33-8995/34-59192. In December 2008, the SEC adopted Release No. 33-8995/34-59192, Modernization of Oil and Gas Reporting ( SEC 33-8995 ). This release amends the oil and gas reporting disclosures that exist in their current form in Regulation S-K and Regulation S-X under the Securities Act of 1933 and the Securities Exchange Act of 1934 to provide investors with a more meaningful and comprehensive understanding of oil and gas reserves. The new rules include changes for the pricing used to estimate reserves; permitting disclosure of possible and probable reserves; permitting the inclusion of non-traditional resources in reserves and the use of new technology for determining reserves. SEC 33-8995 is effective for fiscal years ending on or after December 31, 2009. Early adoption is not permitted. We are currently evaluating the provisions of SEC 33-8995 and assessing the affect its adoption will have on our financial reporting disclosures.

**Contractual Obligations**

The following table sets forth certain of our contractual obligations as of December 31, 2008:

	<b>Long-Term</b>		<b>Operating</b>	<b>Asset</b>	<b>Executive</b>	<b>ACS</b>
	<b>Debt</b>	<b>Interest</b>	<b>Leases</b>	<b>Retirements</b>	<b>Compensation</b>	<b>Topic 740<sup>(1)</sup></b>
2009	\$ 90,368	\$ 14,848,716	\$ 2,641,835	\$ 1,659,371	\$ 1,516,300	\$
2010	17,352	14,848,716	1,820,471	1,031,755	1,516,300	
2011	126,673,074	5,279,543	1,437,749	1,953,292	710,000	
2012	150,000,000	3,864,088	1,419,933	438,172		
2013			1,419,933	393,668		
Thereafter			118,328	7,592,284		
<b>Total</b>	<b>\$ 276,780,794</b>	<b>\$ 38,841,063</b>	<b>\$ 8,858,249</b>	<b>\$ 13,068,542</b>	<b>\$ 3,742,600</b>	<b>\$ 518,219</b>

<sup>(1)</sup> FASB ACS Topic 740 (previously reported as FASB Interpretation No. 48, Accounting for Uncertainty in Income Taxes, An interpretation of FASB Statement No. 109 ). We cannot predict at this time when this obligation may be required to be paid, if at all.

As of September 30, 2009, there had been no significant changes to our contractual obligations from December 31, 2008.

## **Liquidity and Capital Resources**

Our primary cash requirements are for capital expenditures, working capital, operating expenses, acquisitions and principal and interest payments on indebtedness. Our primary sources of liquidity are cash generated by operations, net of the realized effect of our hedging agreements, and amounts available to be drawn under our credit agreements. To the extent our cash requirements exceed our sources of liquidity, we will be required to fund our cash requirements through other means, such as through debt and equity financing activities and/or asset monetizations, and/or curtail capital expenditures.

**Table of Contents*****Liquidity and cash flow***

During the last year there has been volatility and disruption in the equity and debt markets. The volatility and disruptions have created conditions and/or business strategies that have adversely affected the financial condition of some of our lenders, the counterparties to our derivative instruments, our insurers and our crude oil and natural gas purchasers. While in recent months market conditions have stabilized, continued economic uncertainty may limit our ability to access the equity and debt markets. In addition, though a substantial portion of our production is hedged, we are still subject to commodity price risk and our liquidity may be adversely affected if commodity prices were to decline.

Our working capital deficit was \$11.9 million as of September 30, 2009, compared to a working capital deficit of \$37.6 million as of December 31, 2008. Current assets decreased \$16.8 million, primarily due to the decrease in accounts receivable related to lower revenues and the decrease in the mark to market value of our current net derivatives. Current liabilities, primarily accounts payable and accrued liabilities, decreased \$42.6 million due to our reduced capital expenditure activity for the nine months ended September 30, 2009 compared to the nine months ended September 30, 2008.

The table below summarizes certain measures of liquidity and capital expenditures, as well as our sources of capital from internal and external sources, for the past three years and the periods ended September 30, 2009 and September 30, 2008.

	<b>Year Ended December 31,</b>			<b>Nine Months Ended</b>	
	<b>2008</b>	<b>2007</b>	<b>2006</b>	<b>September 30,</b>	<b>2008</b>
	<i>(In millions)</i>				
<b>Financial Measures</b>					
Net cash provided by operating activities	\$ 143.8	\$ 69.6	\$ 14.3	\$ 2.8	\$ 96.9
Net cash used in investing activities	(165.4)	(311.8)	(21.8)	(16.0)	(105.7)
Net cash provided by financing activities	16.7	247.0	7.0	13.3	14.3
Cash and cash equivalents		4.9			10.4
Capital expenditures, including acquisitions	200.3	312.5	21.8	16.1	140.6

Net cash provided by operating activities was \$2.8 million for the nine months ended September 30, 2009, compared to \$96.9 million for the nine months ended September 30, 2008, a change resulting primarily from the reduction in revenues, accounts payable and accrued liabilities as well as the change in the mark to market value of our derivatives during the nine months ended September 30, 2009. During the first nine months of 2009, the net cash provided by operating activities, before changes in working capital, was \$36.4 million. Net cash provided by operating activities, before changes in working capital, was \$89.3 million for the first nine months of 2008.

Net cash used in investing activities was \$16.0 million for the nine months ended September 30, 2009 compared to \$105.7 million for the nine months ended September 30, 2008. Net cash used for investing activities during the nine months ended September 30, 2009 were primarily capital expenditures for the development or maintenance of our proved reserves and the development of our Haynesville Shale natural gas resource play in East Texas. Net cash used in investing activities during the first nine months of 2008 was primarily for the Smith acquisition and capital expenditures for the development of our Southeast Texas properties, offset primarily by proceeds from the sale of our interest in the Barnett Shale Play.

Net cash provided by financing activities was \$13.3 million for the first nine months of 2009 compared to \$14.3 million for the first nine months of 2008. Net cash provided by financing activities during the first nine months of 2009 was primarily the result of net borrowings under our revolving credit facility to satisfy the fourth quarter 2008 balance in current liabilities related to our active drilling program in 2008. Net cash provided by financing activities for the first nine months of 2008 was

## **Table of Contents**

primarily the result of borrowings on debt to fund the Smith acquisition and normal drilling expenditures, offset by repayments of debt from proceeds from the sale of our interest in the Barnett Shale Play and internally generated cash flow from operations.

Net cash provided by operating activities was \$143.8 million for the year ended December 31, 2008, compared to \$69.6 million for the year ended December 31, 2007, a change resulting primarily from an increase in revenues, accounts payable and accrued liabilities and a decrease in accounts receivable trade. Net cash provided by operating activities was \$69.6 million for the year ended December 31, 2007, compared to \$14.3 million for the year ended December 31, 2006, a change resulting primarily from an increase in revenues, accounts payable and accrued liabilities offset by an increase in accounts receivable trade.

Net cash used in investing activities was \$165.4 million for the year ended December 31, 2008 compared to \$311.8 million for the year ended December 31, 2007. Net cash used for investing activities during the year ended December 31, 2008 were primarily related to capital expenditures for the development or maintenance of our proved reserves, prospect acquisitions in Sabine and San Augustine counties in Texas, and the acquisition of properties in South Texas from Smith, offset in part by the sale of properties in the Barnett Shale. Net cash used in investing activities during the year ended December 31, 2007, related primarily to the acquisition of the STGC Properties and capital expenditures for the development or maintenance of our proved reserves.

Net cash provided by financing activities was \$16.7 million for the year ended December 31, 2008 compared to \$247.0 million for the year ended December 31, 2007. Net cash provided by financing activities during the year ended December 31, 2008 was the result of net borrowings under our revolving credit facility primarily used for our capital expenditures for the development of new reserves, for prospect acquisitions and to satisfy the South Texas acquisition from Smith, offset by cash proceeds received from the sale of properties in the Barnett Shale. Net cash provided by financing activities during the year ended December 31, 2007 was primarily the result of net cash provided by our second lien credit agreement to satisfy the acquisition of the STGC Properties and net borrowings under our revolving credit facility for our capital expenditures.

## ***Capital resources***

*Revolving Credit Facility.* On May 8, 2007, we entered into a revolving credit facility with Wells Fargo Bank, National Association, as agent, and The Royal Bank of Scotland, plc, which amended and restated our revolving credit facility dated as of July 15, 2005, as amended. On May 8, 2007, we borrowed \$122.7 million pursuant to this revolving credit facility to pay the consideration for the acquisition of the STGC Properties and to refinance certain of our existing indebtedness. On May 31, 2007, we amended and restated this facility (as amended and restated, our revolving credit facility). Our revolving credit facility provides for aggregate borrowings of up to \$400.0 million for acquisitions of crude oil and gas properties and for general corporate cash requirements.

Borrowings under our revolving credit facility are subject to a borrowing base limitation based on our proved crude oil and natural gas reserves. The borrowing base under this facility is currently set at \$140.0 million. The next borrowing base re-determination under our revolving credit facility is scheduled for January 1, 2010 and is subject to semi-annual redeterminations, although our lenders may elect to make one additional redetermination between scheduled redetermination dates (and have expressly reserved the right to do so between January 1, 2010 and May 1, 2010). As of November 6, 2009, we had \$129.5 million in aggregate indebtedness outstanding under our revolving credit facility. Our revolving credit facility has a term of four years, and all principal amounts, together with all accrued and unpaid interest, will be due and payable in full on May 8, 2011. Our revolving credit facility also provides for the issuance of letters-of-credit up to a \$5.0 million sub-limit.

Advances under our revolving credit facility are in the form of either base rate loans or Eurodollar loans. The interest rate on the base rate loans fluctuates based upon the higher of the lender's prime rate and the Federal Funds rate plus a margin of 0.50%. The interest rate on the

**Table of Contents**

Eurodollar loans fluctuates based upon the rate at which Eurodollar deposits in the LIBOR are quoted for the maturity selected. Pursuant to an amendment to our revolving credit facility, dated July 31, 2009, applicable margin was increased from between 1.25% and 2.00% to between 2.75% and 3.50%, for LIBOR loans, and from zero and 0.50% to between 1.50% and 2.00%, for base rate loans. The specific interest margin applicable is determined by, in each case, the percent of the borrowing base utilized at the time of the credit extension. Eurodollar loans of one, two, three and nine months may be selected. Pursuant to that same amendment, the commitment fee payable on the unused portion of our borrowing base was increased from 0.375% to 0.50%, which fee accrues and is payable quarterly in arrears.

On November 6, 2009, we entered into a second and a third amendment to our revolving credit facility. These amendments provided, among other things, for (i) a change in the voting percentages required for certain amendments or waivers from 50.1% to 60%, and (ii) a waiver of the current ratio and the leverage ratio for the quarter ended September 30, 2009. In connection with this offering, we expect to further amend certain financial and other covenants under our revolving credit facility.

*Second Lien Term Loan Agreement.* On May 8, 2007, we entered into a five-year second lien term loan agreement with Credit Suisse, as agent, which provides for term loans to be made to us in a single draw in an aggregate principal amount of \$150.0 million (our second lien term loan agreement). On May 8, 2007, we borrowed \$150.0 million pursuant to this second lien term loan agreement to pay the consideration for the acquisition of the STGC Properties and to refinance certain existing indebtedness. Our second lien term loan agreement replaced our then existing \$150.0 million subordinate credit facility, which was paid off in full and terminated at closing. Our second lien term loan agreement matures on May 8, 2012. Loans under the second lien term loan agreement bear (pursuant to a June 5, 2007 first amendment to our second lien term loan agreement) interest at a per annum rate equal to LIBOR plus 5.75%, in the case of LIBOR loans, or the base rate plus 4.75%, in the case of base rate loans. Eurodollar loans of one, two, three and six months may be selected.

On May 13, 2009, we entered into a second amendment to our second lien term loan agreement (including with an affiliate of Oaktree Holdings), which, among other things, (i) modified the leverage ratio covenant to be no greater than the leverage ratio under our revolving credit facility plus 0.25, (ii) modified the PV-10 ratio covenant to not less than 1.2x beginning with the fiscal quarter ended June 30, 2009, to not be less than 1.25x, beginning with the fiscal quarter ending December 31, 2009, and to not be less than 1.5x beginning with the fiscal quarter ending December 31, 2010 and thereafter, (iii) increased the applicable margin to 8.0% for loans bearing interest at LIBOR and 7.0% for loans bearing interest at the alternate base rate, unless we meet certain leverage and PV-10 ratios, in which case the applicable margin will be 7.0% and 6.0%, respectively, (iv) set a minimum LIBOR of 3.0%, and (v) included certain fee acreage in calculations of our borrowing base after we have granted a lien on such fee acreage.

On November 6, 2009, we entered into a third amendment and waiver to our second lien term loan agreement with lenders holding a majority of the then outstanding term loans under such agreement, which included an affiliate of Oaktree Holdings. The amendment and waiver provided, among other things, for a waiver of the leverage ratio covenant under that agreement for the quarter ended September 30, 2009.

At September 30, 2009, we were in compliance with the covenants under our revolving credit facility and second term loan agreement, with the exception of the current ratio under our revolving credit facility and the leverage ratio under both of these credit agreements. We obtained waivers of such noncompliance from our lenders under both of these credit agreements for the quarter ended September 30, 2009. However, without improvement in natural gas and crude oil prices, reduction in debt levels, improvement in production volumes and/or other measures, we may not be able to comply with certain covenants under our credit agreements for future quarters. Please see Management's Discussion and Analysis of Financial Condition and Results of Operations Liquidity

**Table of Contents**

and Capital Resources Capital resources and Future capital requirements in our Quarterly Report on Form 10-Q for the quarter ended September 30, 2009 for a detailed discussion of future covenant compliance under our existing credit agreements assuming we do not complete this offering.

Our revolving credit facility and our second lien term loan agreement are secured by liens on substantially all of our assets, including the capital stock of our subsidiaries. The liens securing the obligations under our second lien term loan agreement are junior to those under our revolving credit facility. Interest is payable under our credit agreements as borrowings mature and renew.

In connection with the credit agreements, we utilize financial commodity price hedge instruments to minimize exposure to declining prices on our crude oil and natural gas liquids production. As of September 30, 2009, we had 13.9 MMcfe of equivalent production hedged representing 2.3 MMcfe, 7.6 MMcfe and 3.9 MMcfe of hedges in place in 2009, 2010 and 2011, respectively. Of the hedges in place through 2011, approximately 80% of the hedges are natural gas hedges and 20% are crude oil hedges. We used a series of swaps and costless collars to accomplish the hedging requirements. We also constructively fixed the base LIBOR on \$200.0 million of our variable rate debt by entering into interest rate swaps at a weighted average swap price of 2.61%.

At September 30, 2009, we had \$141.5 million outstanding under our revolving credit facility and \$150.0 million outstanding under our second lien term loan agreement.

*Promissory Notes.* On November 6, 2009, we issued an unsecured promissory note in aggregate principal of \$10.0 million to Wells Fargo Bank, National Association, the administrative agent and a lender under our revolving credit facility. All of the proceeds of this promissory note were used to repay indebtedness outstanding under our revolving credit facility. The indebtedness under this promissory note bears interest at a per annum rate equal to two-month LIBOR plus 2.0% and matures on January 15, 2010; provided that upon an event of default resulting from the failure to make any payment of principal or interest under this promissory note, the interest rate per annum will increase to an amount equal to the lesser of the maximum rate of interest that may be charged under applicable law and LIBOR plus 4.0% or, if the promissory note has been assigned to any person other than any affiliate of Wells Fargo Bank, National Association, LIBOR plus 15.0%. The indebtedness under this promissory note may be prepaid, from time to time, in whole or in part, without premium or penalty. Wells Fargo Bank, National Association as payee, may assign this promissory note at any time provided that the assignee expressly agrees to subordinate its rights and remedies under this promissory note to all obligations under our revolving credit. In addition to any other rights and remedies Wells Fargo Bank, National Association, as payee, may have under this promissory note, upon the occurrence and continuation of an event of default, Wells Fargo Bank, National Association may cause this promissory note to be assigned to Oaktree Holdings in full. As support for this contingent obligation to purchase this promissory note, Oaktree Holdings has deposited \$10.0 million in escrow for the benefit of Wells Fargo Bank, National Association. Upon an event of default under this promissory note, on January 15, 2010, Wells Fargo Bank, National Association may, at its option, cause the note to be assigned to Oaktree Holdings and can draw upon the funds held in escrow as payment for such assignment.

As consideration for Oaktree Holdings' agreement to deposit \$10.0 million in escrow as described above, we issued an unsecured subordinated promissory note on November 6, 2009 in aggregate principal amount of \$2.0 million to Oaktree Holdings. The indebtedness under the promissory note bears interest at a per annum rate equal to 8.0% and matures on the later of (i) November 8, 2012 and (ii) the date six months after payment in full in cash of all Obligations (as such term is defined under our credit agreements), and the termination of all commitments to extend credit under our credit facilities. The promissory note is subordinated in right of payment to the prior payment in full in cash of all obligations under our credit agreements.

## **Table of Contents**

### ***Covenant compliance***

Our existing credit agreements contain certain financial covenants that require us to maintain a maximum level of total debt to Adjusted EBITDAX and a minimum adjusted interest coverage ratio, in each case, on a trailing four-quarter basis. Our compliance with these covenants is tested each quarter. We believe our credit agreements are material agreements and that these financial covenants are material terms of those agreements. Non-compliance with these covenants could result in a default, and an acceleration in the repayment of amounts outstanding, under our credit agreements. If an event of default occurs and is continuing under either credit agreement, we would be precluded from, among other things, paying dividends on our common stock or making additional borrowings. As a result, we believe the information presented below regarding these financial covenants is material to investors' understanding of our results of operations and financial condition. See [Liquidity and Capital Resources](#) [Capital resources](#) for a more detailed description of terms and provisions of our credit agreements.

At September 30, 2009, the financial covenants contained in our credit agreements included (a) with respect to our revolving credit facility, maintaining (i) a ratio of current assets to current liabilities of at least 1.0 to 1.0, (ii) an interest coverage ratio of Adjusted EBITDAX (defined as [EBITDAX](#) in such agreement) to cash interest expense of not less than 3.0 to 1.0 and (iii) a ratio of total debt to Adjusted EBITDAX of not greater than 2.75 to 1.00 and (b) with respect to our second lien term loan agreement, maintaining (i) a minimum leverage ratio of total debt to Adjusted EBITDAX of not greater than the leverage ratio under our revolving credit facility plus 0.25 and (ii) a ratio of the PV-10 value of our oil and gas reserves to total net debt, or PV-10 Ratio (which ratio is calculated semi-annually based on the latest reserve report), to be less than 1.2x.

As of September 30, 2009, our ratio of current assets to current liabilities was 0.71. For the four quarters ended September 30, 2009, our ratio of total debt to Adjusted EBITDAX was 3.68; our ratio of interest expense to Adjusted EBITDAX was 0.27; and our PV-10 Ratio was 3.68.

We believe the presentation of Adjusted EBITDAX is appropriate to provide additional information to investors to demonstrate our ability to comply with the financial covenants to which we are and expect to be subject. For a reconciliation of net income (loss) to Adjusted EBITDAX, see [Prospectus Summary](#) [Non-GAAP Financial Measures and Reconciliations](#). The calculation of Adjusted EBITDAX in this prospectus is in accordance with the definitions contained in our credit agreements.

### ***Future capital requirements***

Our future natural gas, crude oil and natural gas liquids reserves and production, and therefore our cash flow and results of operations, are highly dependent on our success in efficiently developing and exploiting our current reserves and economically finding or acquiring additional recoverable reserves. We intend to grow our reserves and production by further exploiting our existing property base, through drilling opportunities identified in our new resource plays in East and South Texas and in our conventional inventory. We expect to focus much of our drilling activity over the next several years on continued development of our East Texas and South Texas resource plays while we continue the development and exploitation of our core legacy properties in the South Texas and Gulf Coast areas. We anticipate that acquisitions, including of undeveloped leasehold interests, will continue to play a significant role in our business strategy as those opportunities periodically arise from time to time. While there are currently no unannounced agreements for the acquisition of any material businesses or assets, such transactions can be effected quickly and could occur at any time.

We believe that the proceeds from this offering and our internally generated cash flow combined with access to our revolving credit facility will be sufficient to meet the liquidity requirements necessary to fund our daily operations, planned capital development and execute on our growth strategy and debt service requirements for the next

12 months. Our ability to execute on our growth strategy will be determined, in large part, by the availability of debt and equity capital at that

**Table of Contents**

time, and we continuously evaluate our financing opportunities. Any decision regarding a financing transaction, and our ability to complete such a transaction, will depend on prevailing market conditions and other factors. Our ability to continue to meet our liquidity requirements and execute on our growth strategy can be impacted by economic conditions outside of our control, such as the recent disruption in the capital and credit markets, as well as continued commodity price volatility, which could, among other things, lead to a decline in the borrowing base under our revolving credit facility in connection with a borrowing base redetermination. In such case, we may be required to seek other sources of capital earlier than anticipated, although the restrictions in our credit agreements may impair our ability to access other sources of capital, and access to additional capital may not be available on terms acceptable to us or at all. See **Risk Factors** Recent market events and conditions, including disruptions in the U.S. and international credit markets and other financial systems and the deterioration of the U.S. and global economic conditions, could, among other things, impede access to capital or increase the cost of capital, which would have an adverse effect on our ability to fund our working capital and other capital requirements, **Risk Factors** Our development and exploration operations, including on our East Texas resource play acreage, require substantial capital, and we may be unable to obtain needed capital or financing on satisfactory terms, which could lead to a loss of properties and a decline in our natural gas, crude oil and natural gas liquids reserves and **Management's Discussion and Analysis of Financial Condition and Results of Operations**.

Due to low commodity prices and limited access to capital markets during 2009, our capital expenditure strategy for 2009 was to keep expenditures within internally generated cash flow and to reduce debt. For the nine months ended September 30, 2009, we made capital expenditures of \$16.5 million, primarily for our Liberty County and East Texas leasing and drilling programs. We currently anticipate capital expenditures to be no more than \$19 million in 2009. Our 2010 capital budget is approximately \$55 million, exclusive of acquisitions, of which we expect to spend approximately 76% of our budget on our East Texas and South Texas resource plays and 24% on our existing producing assets. We plan to drill 12 gross (6.0 net) wells in 2010, including 7 gross (3.0 net) wells on our East Texas resource play acreage, one gross (0.4 net) wells on our South Texas resource play acreage, and 4 gross (2.6 net) wells in Liberty County. The actual number of wells drilled and the amount of our 2010 capital expenditures will depend on market conditions, availability of capital and drilling and production results. The following table sets forth our estimated capital budget for 2010:

	<b>Southeast</b>	<b>South</b>	<b>Southwest</b>	<b>Colorado</b>	<b>East</b>	<b>Non-</b>	
<b>2010E Capital Budget</b>	<b>Texas</b>	<b>Texas</b>	<b>Louisiana</b>	<b>and Other</b>	<b>Texas</b>	<b>Operated</b>	<b>Total</b>
Capital Expenditures (in millions)	\$ 13	\$ 3	\$	\$	\$ 39	\$	\$ 55
Gross Wells	4	1			7		12
Net Wells	2.6	0.4			3.0		6.0

**Table of Contents****Inflation and Changes in Prices**

While the general level of inflation affects certain costs associated with the petroleum industry, factors unique to the industry result in independent price fluctuations. Such price changes have had, and will continue to have a material effect on our operations; however, we cannot predict these fluctuations.

The following table indicates the average quarterly crude oil, natural gas and natural gas liquids prices received over the last three years. Average prices per Mcf equivalent, computed by converting crude oil production to natural gas equivalents at the rate of 6 Mcf per barrel, indicate the composite impact of changes in crude oil and natural gas prices.

	Average Prices <sup>(1)</sup>			
	Natural Gas (per Mcf)	Crude Oil (per Bbl)	Natural Gas Liquids <sup>(2)</sup> (per Bbl)	Per Equivalent Mcf
2009 year to date	\$ 6.77	\$ 81.46	\$ 27.19	\$ 7.31
2008				
First	\$ 8.39	\$ 78.62	\$ 57.18	\$ 9.39
Second	10.23	95.52	55.73	10.94
Third	9.68	92.54	63.49	10.67
Fourth	7.20	68.42	28.84	7.52
2007				
First	\$ 7.07	\$ 60.28	\$	\$ 8.33
Second	7.64	62.66	43.29	8.09
Third	7.60	66.47	45.17	8.18
Fourth	7.28	69.41	55.19	6.78
2006				
First	\$ 7.71	\$ 58.11	\$	\$ 8.63
Second	6.61	60.48		8.09
Third	6.72	60.85		8.07
Fourth	6.56	56.71		7.71

(1) Average sales price are shown net of the settled amounts of our natural gas and crude oil hedge contracts.

(2) Natural gas liquids became a significant addition to our reserves since the acquisition of the STGC Properties in May 2007.

**Quantitative and Qualitative Disclosures About Market Risk**

The following market rate disclosures should be read in conjunction with the quantitative disclosures about market risk contained in this prospectus, as well as with the consolidated financial statements and notes thereto. All of our derivative financial instruments are for purposes other than trading. We only enter into derivative financial instruments in conjunction with our crude oil and natural gas price hedging activities. Hypothetical changes in interest rates and prices chosen for the following stimulated sensitivity effects are considered to be reasonably possible

near-term changes generally based on consideration of past fluctuations for each risk category. It is not possible to accurately predict future changes in interest rates and product prices. Accordingly, these hypothetical changes may not be an indicator of probable future fluctuations.

## **Table of Contents**

### ***Interest Rate Risk***

We are exposed to interest rate risk on debt with variable interest rates. To manage this risk and reduce our sensitivity to volatile interest rates, we have entered into interest rate swap agreements with a total notional amount of \$200.0 million related to our indebtedness. However, these interest rate swap agreements limit the benefit of decreases in interest rates. Moreover, these swap agreements apply only to a portion of our debt and provide only partial protection against increases in interest rates. Under these agreements, we receive interest at a floating rate equal to one-month LIBOR and pay interest at a fixed rate of 1.50% for \$50.0 million and pay interest at 2.90% for \$150.0 million, effectively setting our base LIBOR rate at 2.6%. As of September 30, 2009, the interest rate swaps had an estimated net fair value liability of \$5.2 million. Assuming our current level of borrowings and considering the effect of the interest rate swap agreements, a 100 basis point increase in the interest rate we pay under our revolving credit facility would not have had a material impact on our interest expense for the nine months ended September 30, 2009.

### ***Commodity Price Risk***

In the past we have entered into, and may in the future enter into, certain derivative arrangements with respect to portions of our natural gas, crude oil and natural gas liquids production to reduce our sensitivity to volatile commodity prices. During 2009, 2008 and 2007, we entered into price swaps and put agreements with financial institutions. We believe that these derivative arrangements, although not free of risk, allow us to achieve a more predictable cash flow and to reduce exposure to price fluctuations. However, derivative arrangements limit the benefit to us of increases in the prices of crude oil and natural gas sales. Moreover, our derivative arrangements apply only to a portion of our production and provide only partial price protection against declines in price. Such arrangements may expose us to risk of financial loss in certain circumstances. We expect that the monthly volume of derivative arrangements will vary from time to time. We continuously reevaluate our price hedging program in light of increases in production, market conditions, commodity price forecasts, and capital spending and debt service requirements.

### ***Counterparty Risk***

We have exposure to financial institutions in the form of derivative transactions in connection with our hedges. These transactions are with counterparties in the financial services industry, specifically with members of our bank group. These transactions could expose us to credit risk in the event of default of our counterparties. We believe our counterparty risk related to our derivatives is low because of the offsetting relationships we have with each of our counterparties. In addition, we also have exposure to financial institutions within our credit agreements. If any lender under our revolving credit agreement is unable to fund its commitment, our liquidity could be reduced by an amount up to the aggregate amount of such lender's commitment under the revolving credit agreement.

### ***Derivative Instruments***

At the end of each reporting period we record on our balance sheet the mark-to-market valuation of our derivative instruments. We recorded a net asset for derivative instruments of \$34.2 million and a net liability of \$15.3 million at December 31, 2008 and 2007, respectively. As a result of these agreements, we recorded a non-cash unrealized gain, for unsettled contracts, of \$49.4 million, a non-cash unrealized loss of \$18.2 million and a non-cash unrealized gain of \$6.1 million for the years ended December 31, 2008, 2007 and 2006, respectively. As of September 30, 2009, these derivative instruments had an estimated net fair value asset of \$16.9 million. The estimated change in fair value of the derivatives is reported in Other Income (Expense) as unrealized gain (loss) on derivative instruments.

For natural gas, crude oil and natural gas liquids derivatives settled during 2008, we realized losses, reflected in operating revenues, of \$9.3 million for the year ended December 31, 2008. For natural

**Table of Contents**

gas, crude oil and natural gas liquids derivatives settled during 2007, we realized gains of \$3.0 million for the year ended December 31, 2007 and a non-cash unrealized gain of \$6.1 million for the twelve months ended December 31, 2006. For natural gas, crude oil natural gas liquids derivatives settled during 2006, we realized losses, reflected in operating revenues of \$0.6 million for the twelve months ended December 31, 2006. For interest rate swaps, we realized losses, included in interest expense, of \$4.0 million for the twelve months ended December 31, 2008. We realized gains, included in interest expense, of \$0.2 million from interest rate swaps for the twelve months ended December 31, 2007.

For natural gas, crude oil and natural gas liquids derivatives settled during the nine months ended September 30, 2009 and 2008, reflected in operating revenues, we realized gains of \$30.8 million and losses of \$13.2 million, respectively. We also recorded a non-cash unrealized loss, reflected in other income (expense), of \$17.7 million for the nine months ended September 30, 2009 and a non-cash unrealized gain of \$0.8 million for the nine months ended September 30, 2008. For interest rate swaps, we realized a loss, included in interest expense, of \$3.2 million and \$2.8 million for the nine months ended September 30, 2009 and 2008, respectively. We also recorded for interest rate swaps non-cash gains, reflected in other income (expense), of \$0.4 million and \$0.9 million for the nine months ended September 30, 2009 and 2008, respectively.

The following commodity derivatives contracts were in place at September 30, 2009.

<b>Crude Oil</b>		<b>Volume/Month</b>	<b>Price/Unit</b>
Oct 2009-Dec 2009	Swap	5,200 Bbls	\$ 74.20
Oct 2009-Dec 2009	Collar	12,800 Bbls	\$ 66.55-\$71.40
Oct 2009-Dec 2009	Collar	10,733 Bbls <sup>(1)</sup>	\$ 115.00-\$171.50
Jan 2010-Dec 2010	Swap	4,250 Bbls	\$ 72.32
Jan 2010-Dec 2010	Collar	9,000 Bbls	\$ 65.28-\$70.60
Jan 2010-Dec 2010	Collar	7,604 Bbls <sup>(1)</sup>	\$ 110.00-\$181.25
Jan 2011-Dec 2011	Swap	3,300 Bbls	\$ 70.74
Jan 2011-Dec 2011	Collar	7,000 Bbls	\$ 64.50-\$69.50
<b>Natural Gas</b>			
Oct 2009-Dec 2009	Swap	36,000 MMbtu	\$ 8.32
Oct 2009-Dec 2009	Collar	475,000 MMbtu	\$ 7.90-\$9.45
Oct 2009-Dec 2009	Collar	101,200 MMbtu <sup>(1)</sup>	\$ 9.50-\$18.70
Jan 2010-Jun 2010	Swap	45,833 MMbtu <sup>(1)</sup>	\$ 6.25 <sup>(2)</sup>
Jan 2010-Dec 2010	Swap	29,000 MMbtu	\$ 7.88
Jan 2010-Dec 2010	Collar	351,000 MMbtu	\$ 7.57-\$9.05
Jan 2010-Dec 2010	Collar	85,167 MMbtu <sup>(1)</sup>	\$ 9.00-\$15.25
Jan 2011-Dec 2011	Collar	266,000 MMbtu	\$ 7.32-\$8.70
<b>Interest Rate</b>		<b>Notional Amount</b>	<b>Fixed LIBOR Rate</b>
Oct 2009-Dec 2010	Swap	\$ 50,000,000	1.50%
Oct 2009-May 2011	Swap	\$150,000,000	2.90%

- (1) Average volume per month for the remaining contract term.
- (2) Average price for the contract term.

The total net fair value asset for derivative instruments at September 30, 2009 was approximately \$16.9 million and at December 31, 2008 was approximately \$34.2 million, which are shown as derivative instruments on the balance sheet.

**Table of Contents**

**BUSINESS**

**Company Overview**

Crimson is an independent energy company engaged in the acquisition, exploitation, exploration and development of natural gas and crude oil properties. We have historically focused our operations in the onshore U.S. Gulf Coast and South Texas regions, which are generally characterized by high rates of return in known, prolific producing trends. We have recently expanded our strategic focus to include longer reserve life resource plays that we believe provide significant long-term growth potential in multiple formations.

In late 2008 and early 2009, we acquired approximately 12,000 net acres in East Texas where we completed our first well, the Kardell #1H, in October 2009. This well targeted the Haynesville Shale and initially produced 30.7 MMcfe/d, which we believe to be the highest publicly announced initial production rate to date in that formation. In addition to the Haynesville Shale, we believe this acreage is equally prospective in the Bossier Shale and James Lime formations where industry participants have drilled successful wells on adjacent acreage.

In 2007, we acquired approximately 2,800 net acres in South Texas, which we believe is prospective in the Austin Chalk and the Eagle Ford Shale. We drilled our first well on this acreage, the Dubose #1, during the fourth quarter of 2009, and we are preparing to complete the well in the Eagle Ford Shale.

We intend to grow reserves and production by continuing to develop our existing producing property base, developing our East Texas and South Texas resource potential, and pursuing opportunistic acquisitions in areas where we have specific operating expertise. We have developed a significant project inventory of over 800 drilling locations associated with our existing property base. Our technical team has a successful track record of adding reserves through the drillbit. Since January 2008, we have drilled 34 gross (15.2 net) wells with an overall success rate of 91% (excluding one well which has not yet been completed).

As of December 31, 2008, our estimated proved reserves, as prepared by our independent reserve engineering firm, Netherland, Sewell & Associates, Inc., were 131.9 Bcfe, consisting of 96.2 Bcf of natural gas and 6.0 MMBbl of crude oil, condensate and natural gas liquids. As of December 31, 2008, 73% of our proved reserves were natural gas, 69% were proved developed and 81% were attributed to wells and properties operated by us. From 2006 to 2008, we grew our estimated proved reserves from 46.4 Bcfe to 131.9 Bcfe. In addition, we grew our average daily production from 7.3 MMcfe/d for the year ended December 31, 2006 to 43.0 MMcfe/d for the nine months ended September 30, 2009. For the nine months ended September 30, 2009, we generated \$55.2 million of Adjusted EBITDAX. Our definition of the non-GAAP financial measure of Adjusted EBITDAX and a reconciliation of net income (loss) to Adjusted EBITDAX are provided under Prospectus Summary Non-GAAP Financial Measures and Reconciliations. For the same period, our net income (loss) was \$(16.8) million.

Our areas of primary focus include the following:

*East Texas.* Our East Texas properties includes approximately 17,000 gross (12,000 net) acres acquired in 2008 and early 2009 in the highly prospective and active resource play in San Augustine and Sabine Counties, where we will focus primarily on the pursuit of the Haynesville Shale, Bossier Shale and James Lime formations. In October 2009, we drilled and completed our first well in this area, the Kardell #1H. While drilling this well, we identified additional prospective formations, including the Pettet and Knowles Lime.

*Southeast Texas.* Our Southeast Texas properties primarily include the Felicia field area in Liberty County. We own approximately 27,300 gross (15,100 net) acres in Liberty, Madison and Grimes Counties. As of September 30, 2009, we owned and operated 35 gross (27.0 net)

**Table of Contents**

producing wells, representing approximately 38% of our average daily production for the first nine months of 2009.

*South Texas.* Our South Texas properties include approximately 2,800 gross (2,800 net) acres in Bee County, which we believe to be prospective in the Austin Chalk and Eagle Ford Shale. Our conventional operations include approximately 87,600 gross (50,700 net) acres predominantly in Brooks, Lavaca, DeWitt, Zapata, Webb and Matagorda Counties.

We also own interests in the following areas:

*Southwest Louisiana.* Our Southwest Louisiana properties include approximately 8,200 gross (3,600 net) acres, primarily in the Fenton field area of Calcasieu Parish and our legacy Grand Lake and Lacassine fields in Cameron Parish. In addition, we own a 15% working interest ownership in 2007 exploratory successes in Louisiana at Sabine Lake and West Cameron 432.

*Colorado and Other.* Our Colorado and other properties include primarily producing assets and approximately 16,900 gross (11,900 net) acres in the Denver Julesburg Basin in Colorado (mostly in Adams County) and a minor crude oil property in Mississippi.

The following table sets forth certain information with respect to our estimated proved reserves as of December 31, 2008, as estimated by Netherland, Sewell & Associates, Inc., and production and net acreage for the nine months ended September 30, 2009. The following table also identifies potential drilling locations and net acreage as of September 30, 2009:

Region	Estimated Proved Reserves as of December 31, 2008 (MMcfe)	Proved Reserves			Net acreage at September 30, 2009	Identified Potential Gross Drilling Locations at September 30, 2009 <sup>(1)</sup>
		% Natural Gas	% Proved Developed	Average Daily Production for the Nine Months Ended September 30, 2009 (Mcf/d)		
Southeast Texas	29,393	60.1%	85.8%	16,521	15,100	26
South Texas	60,602	78.0%	59.8%	11,963	53,500	124
Southwest Louisiana	10,398	62.4%	57.3%	3,139	3,600	4
Colorado and Other	6,675	71.5%	55.3%	539	11,900	164
East Texas <sup>(2)</sup>					12,000	422
Non-operated <sup>(3)</sup>	24,879	80.2%	79.8%	10,817		82
Total	131,947	72.9%	68.9%	42,979	96,100	822

- (1) Includes multiple drilling locations on acreage with multiple target formations.
- (2) We recently completed our first well on our East Texas acreage, the Kardell #1H, as a horizontal Haynesville Shale producer, in which we own a 52% working interest. Drilling locations in this region were identified assuming an allocated 100 acres per potential horizontal East Texas well drilled to multiple target formations.
- (3) Our non-operated properties consist primarily of our 25% working interest in the Samano field in Starr and Hidalgo Counties in South Texas, our 28% working interest in certain fields in Liberty County in Southeast Texas and our 15% and 15% respective working interests resulting from exploratory successes in 2007 at Sabine Lake and West Cameron 432, in Southwest Louisiana.

We have significantly increased our proved reserves and production through acquisitions and drilling since our recapitalization in early 2005. In 2007, we tripled our reserve size through the acquisition from EXCO of producing properties in the South Texas, Southeast Texas and Southwest Louisiana regions, adding an aggregate of approximately 95 Bcfe to our net proved reserves at a cost

## **Table of Contents**

of \$2.50 per Mcfe of proved reserves as of the effective date. We added 21 Bcfe to our South Texas proved reserves through the Smith acquisition in 2008 at an average cost of \$2.82 per Mcfe of proved reserves as of the closing date. Our acquisitions are focused on areas in which we can leverage our geographic and geological expertise to exploit those drilling opportunities identified at the time of the acquisition and develop an inventory of additional drilling prospects that we believe will enable us to grow production and add reserves. We intend to continue to pursue the acquisition of assets in our core areas, to continue to selectively expand our presence in our East Texas resource play and to continue to develop exploratory opportunities through our internal prospect generation team.

We have also been successful at adding reserves through the drilling of non-proved targets through our exploitation program on existing producing properties. Since January 2008, we have drilled 34 gross wells (16 operated and 18 non-operated), with an overall success rate of 91% (excluding one well which has not yet been completed). We added approximately 18.4 Bcfe in proved reserves in 2008. We believe that we have a current inventory of 822 identified drilling opportunities on our producing asset base as noted in the table above.

During the latter half of 2008 and early 2009, we acquired approximately 12,000 net acres in San Augustine and Sabine Counties in East Texas, which we believed to be prospective in the Haynesville Shale, James Lime and Mid-Bossier formations. We have identified over 422 drilling locations on our acreage targeting these formations alone. Recent activity in the area also indicates that the Pettet and Knowles Lime formations also appear prospective. We have separated our acreage into several joint development areas ( JDAs ) of varying sizes and are working with other industry players holding acreage positions in those areas to jointly develop our positions. Our Bruin prospect, on which our first well, the Kardell #1H was drilled, is one such JDA. We and Devon Energy Corporation, the operator, each contributed approximately 350 acres to the JDA in San Augustine County and drilled the Kardell #1H well. Given the success we have had on the Kardell #1H well, we will likely allocate a large portion of our drilling capital budget to develop this resource play further for the next several years.

## **Strategy**

The key elements of our business strategy are:

*Develop our East Texas resource play.* We have approximately 12,000 net acres in San Augustine and Sabine Counties of East Texas, which we believe is prospective in the Haynesville Shale, Bossier Shale and James Lime formations. In November 2009, we announced the completion and initial production of our first well on this acreage, the Kardell #1H. The well tested at 30.7 MMcfe/d, which we believe to be the highest publicly reported 24-hour initial production rate for a Haynesville Shale well in Texas or Louisiana and is currently flowing to sales. We believe the Kardell #1H confirms the potential of our Bruin Prospect, which is comprised of 3,000 net acres in San Augustine County, resulting in over 100 potential drilling locations in multiple formations. We are currently in the planning stages of several wells in this area and intend to further evaluate and exploit these multiple formations beginning in early 2010. We have an additional 9,000 net acres outside this prospect within Sabine and San Augustine Counties, and we expect to drill our initial well on that acreage in early 2010. We intend to allocate a substantial portion of our capital budget over the next several years to develop the significant potential that we believe exists on our East Texas acreage. Based on our current capital budget, we expect to drill approximately 7 gross (3.0 net) wells in 2010 that will target the Haynesville and Bossier Shales, while retaining future development opportunities in shallower formations.

*Develop our South Texas resource play.* We have approximately 2,800 net acres in Bee County, Texas which we believe is prospective in the Austin Chalk and Eagle Ford Shale. In November 2009, we drilled our initial well on this acreage, the Dubose #1. This well is in the process of being completed with results expected prior to year end 2009. We intend to

## **Table of Contents**

allocate a portion of our capital budget in 2010 to validate the potential we believe exists on our acreage.

*Exploit our existing producing property base to generate cash flows.* We believe our multi-year drilling inventory of high return exploitation opportunities on our existing producing properties provides us with a solid platform to continue growing our reserves and production for the next several years. We believe these projects, if successful, will allow us to fund a larger portion of our resource plays and exploration activities from cash flows from operations. In 2010, we intend to focus much of our exploitation drilling on our Liberty County acreage, located in Southeast Texas. We will be targeting the Yegua and Cook Mountain formations in which industry players have recently experienced success on wells in the area. We own 3D seismic data that covers substantially all of our Liberty County acreage, giving us a higher degree of confidence in the potential in this area. We have drilled 11 gross (6.8 net) wells in Liberty County since early 2008 and have successfully completed 82%. During 2010, we intend to drill 4 gross (2.6 net) wells in this area.

*Explore in defined producing trends.* Our exploration activities consist primarily of step-out drilling in known, producing formations in our legacy areas of South and Southeast Texas. In 2007, we began acquiring seismic data to use in identifying new exploration prospects. Currently, we have a library of over 4,200 square miles of 3D seismic data and over 2,500 linear miles of 2D seismic data.

*Make opportunistic acquisitions that meet our strategic and financial objectives.* We seek to acquire natural gas and crude oil properties, including both undeveloped and producing reserves in areas where we have specific operating expertise.

*Reduce commodity exposure through hedging.* We employ the use of swaps and costless collar derivative instruments to limit our exposure to commodity prices. As of September 30, 2009, we had 13.9 Bcfe of equivalent production hedged, representing 1.8 Bcf, 6.1 Bcf and 3.2 Bcf of natural gas hedges in place and 86 MBbl, 250 MBbl and 124 MBbl of crude oil hedges in place for the fourth quarter of 2009, the year 2010 and the year 2011, respectively. The average price of our natural gas and crude oil hedges in place is \$8.19/MMBtu and \$86.03/Bbl for the fourth quarter of 2009, \$7.71/MMBtu and \$83.02/Bbl in the year 2010 and \$7.32/MMBtu and \$66.50/Bbl in the year 2011.

## **Competitive Strengths**

Our competitive strengths include:

*Geographically focused operations in basins with established production profiles.* The geographic concentration of our current operations along the onshore Texas Gulf Coast and in South Texas allows us to establish economies of scale with respect to drilling, production, operating and administrative costs, and enables us to leverage our base of technical expertise in these geographic areas. In addition, we believe the cash flows from our existing properties provide a stable foundation to support our ongoing exploitation and development efforts.

*Significant operational control.* As of September 30, 2009, we operated a majority of our producing wells. As a result, we exercise a significant level of control over the amount and timing of expenses, capital allocation and other aspects of development, exploitation and exploration. While operatorship of future wells on our East Texas acreage will be subject to negotiation as drilling units are formed, we expect to operate a significant number of the wells we drill on this acreage.

*Proven track record of reserve and production growth.* Since 2005, we have significantly grown proved reserves and production through a combination of continued drilling success and the successful acquisition of underdeveloped properties that have proven to be

## **Table of Contents**

complementary to our existing asset base and technical expertise. We plan to continue this growth by focusing on a balanced combination of drilling longer life, multi-pay natural gas targets within our resource plays and exploitation of our producing properties and undeveloped acreage.

*Large inventory of identified projects.* We currently have an inventory of over 800 identified potential drilling locations, including 375 associated with our existing conventional properties, plus an estimated 422 locations on our East Texas resource play acreage and an estimated 25 locations on our South Texas resource play acreage. Since the beginning of 2008, we have drilled 16 gross (10.7 net) operated and 18 gross (4.5 net) non-operated wells and have experienced a 91% success rate (excluding one well which has not yet been completed). We expect to drill 12 gross (6.0 net) wells in 2010.

*Experienced management and technical teams.* Our senior management team averages over 25 years of experience in the energy industry and is led by Allan D. Keel, President and Chief Executive Officer, who has 25 years of experience in the oil and natural gas industry. Mr. E. Joseph Grady, our Senior Vice President and Chief Financial Officer, has over 30 years of financial management experience in the energy industry. Other members of our senior management include: Mr. Tracy Price, our Senior Vice President Land Business/Development; Mr. Thomas H. Atkins, our Senior Vice President Exploration; and Mr. Jay S. Mengle, our Senior Vice President Engineering, each of whom has more than 25 years of experience in the oil and gas industry. Our experienced management team has an established track record of successfully exploiting and developing natural gas and crude oil properties.

## **Properties**

As of September 30, 2009, we operated a majority of our producing wells and held an average 52% (75% operated and 25% non-operated) working interest. Gross wells are the total wells in which we own a working interest. Net wells are the sum of the fractional working interests we own in gross wells. Our estimated net proved reserves were approximately 2.6 MMBbls of crude oil and condensate 96.2 Bcf of natural gas and 3.4 MMBbls of natural gas liquids at December 31, 2008. Substantially all of our properties are located onshore in Texas and Louisiana. As of December 31, 2008, our properties were located in the following regions: Southeast Texas, South Texas, Southwest Louisiana and Colorado and Other, although we separately classify our non-operated properties in our regions as Non-Operated. Given our success in 2009 with the first well on our East Texas acreage, the Kardell #1H, we intend to allocate a substantial portion of our drilling capital budget in the next several years to the development of the significant potential that we believe exists in this area.

Our estimated net proved reserves as of December 31, 2008, were approximately 72.9% natural gas, 15.4% natural gas liquids and 11.7% crude oil and condensate. As of December 31, 2008, approximately 68.9% of total proved reserves were classified as proved developed. The average remaining proved developed producing reserves per net operated well at December 31, 2008 was 356.4 MMcfe. Our estimated net proved reserves at December 31, 2008 had estimated PV-10 of \$291.0 million.

Our average proved reserves-to-production ratio, or average reserve life, is approximately 8.4 years based on our proved reserves as of December 31, 2008 and production for the nine months ended September 30, 2009 on an annualized basis. During 2008, 15 gross (10.3 net) operated wells and 17 gross (4.0 net) non-operated wells were drilled, 93% and 88% respectively of which were successes. During the nine months ended September 30, 2009, we drilled one gross (0.4 net) operated well, which has not yet been evaluated. We also drilled one gross (0.5 net) non-operated well in our East Texas acreage, which was a success. In 2010, we currently expect to drill 12 gross (6.0 net) wells. Also, as of September 30, 2009, we had identified 66 proved undeveloped drilling locations and 756 other drilling locations.

**Table of Contents**

**Operated Properties**

***East Texas***

East Texas includes 17,000 gross (12,000 net) acres acquired in the latter half of 2008 and early 2009 in the highly prospective and active resource play in San Augustine and Sabine Counties, in which we will focus primarily on the pursuit of the Haynesville Shale, Bossier Shale and James Lime formations. Other potential formations that were seen in our Kardell #1H well (a non-operated well), and that are believed to be prospective in the area, are the Pettet and Knowles Lime. In the past year, the Haynesville Shale formation has become one of the most active natural gas plays in the United States, primarily in Northern Louisiana and East Texas. The formation is as much as 300 feet thick and exists at depths ranging from 10,500 to more than 15,000 feet. The Haynesville Shale has proven productive across numerous parishes in Northwest Louisiana and counties in East Texas, primarily Harrison, Panola and Shelby. We have identified 422 drilling locations in this area, based on 100-acre spacing. We are actively pursuing joint venture opportunities with third parties to develop our Haynesville Shale acreage in Texas. While operatorship of future wells on our East Texas acreage will be subject to negotiation as drilling units are formed, we expect to operate a significant number of the wells we drill on this acreage.

***Southeast Texas***

Our Southeast Texas properties consist primarily of the Felicia field area in Liberty County, Texas, which we acquired in the EXCO acquisition. We believe that the Liberty County area will continue to provide accelerated production and high rates of return as we exploit our probable and possible opportunities targeting the Yegua and Cook Mountain formations. We currently plan to drill or sidetrack 4 gross (2.6 net) wells during 2010 in Liberty County. The Southeast Texas region also includes the Madisonville/Iola area in Madison and Grimes Counties, which has deeper Smackover potential to complement our current Yegua, Frio, Cook Mountain and Rodessa production.

As of September 30, 2009, in Southeast Texas, we owned and operated 35 gross (27.0 net) producing wells. Our operated wells have an average working interest of 75% and an average net revenue interest of 60%. These wells produce crude oil and natural gas from various formations at depths from 2,000 to 16,300 feet. We principally produce from the Frio, Yegua, Cook Mountain and Rodessa formations. We own 27,300 gross (15,100 net) acres in Southeast Texas.

The average net production from our Southeast Texas properties for the year ended December 31, 2008 was 20.6 MMcfe/d, or approximately 39% of our 2008 total net equivalent production. The average net production from our Southeast Texas properties for the nine months ended September 30, 2009 was 16.5 MMcfe/d, or approximately 38% of our total net equivalent production for the nine months ended September 30, 2009. The average net production per net well for the year ended December 31, 2008 and for the nine months ended September 30, 2009 was 0.8 MMcfe/d and 0.6 MMcfe/d, respectively.

Our estimated net proved reserves for our Southeast Texas properties as of December 31, 2008, were 29,393 MMcfe, of which approximately 80.3% were natural gas and natural gas liquids and 85.8% were classified as proved developed. The average remaining proved developed producing reserves per net operated well at December 31, 2008 was 672.7 MMcfe. Our estimated net proved reserves at December 31, 2008 had estimated PV-10 of \$89.7 million.

Our average reserve life for this region is approximately five years based on our proved reserves as of December 31, 2008 and production for the nine months ended September 30, 2009 on an annualized basis. During 2008, seven gross (4.9 net) wells were drilled on our Southeast Texas properties, 86% of which were successes, and during the nine months ended September 30, 2009, we drilled two gross (1.3 net) wells in Southeast Texas, of which both were successful. Also, as of September 30, 2009, we had identified five proved undeveloped drilling locations and 21 other

drilling

locations on our Southeast Texas leasehold acreage. Our drilling opportunities for Southeast Texas have an average estimated well life of eight years.

### ***South Texas***

Our South Texas properties consist primarily of: the Cage Ranch field in Brooks County and Southwest Speaks field in Lavaca County, both acquired in the EXCO acquisition; the North Bob West field in Zapata County and the Brushy Creek field in DeWitt County, both acquired in the Smith acquisition; and Lobo trend production and acreage in Zapata and Webb Counties. We own approximately 90,400 gross (53,500 net) acres in these known prolific trends that we intend to continue to exploit.

We also own approximately 28,000 gross (28,000 net) acres in the Edwards Trend, which we call our NW Pawnee prospect, that we believe not only contains the Edwards/Sligo formations, but also believe to be prospective in the Austin Chalk and the Eagle Ford Shale. We recently drilled and are in the process of completing, the Dubose #1 well, our first well on this acreage. If this well is successful, we plan to drill additional wells in this area during 2010.

As of September 30, 2009, in South Texas, we owned and operated 94 gross (73.0 net) producing wells. Our operated wells have an average net working interest of 73% and an average net revenue interest of 58%. These wells produce crude oil and natural gas from various formations at depths from 2,000 to 19,400 feet. We principally produce from the Wilcox, Vicksburg and Lobo formations.

The average net production from our South Texas properties for the year ended December 31, 2008 was 9.7 MMcfe/d, or approximately 19% of our 2008 total net equivalent production. The average net production from our South Texas properties for the nine months ended September 30, 2009 was 12.0 MMcfe/d, or approximately 28% of our total net equivalent production for the nine months ended September 30, 2009. The average net production per operated net well for the year ended December 31, 2008 and for the nine months ended September 30, 2009 was 0.1 MMcfe/d and 0.2 MMcfe/d, respectively.

Our estimated net proved reserves at December 31, 2008 for our South Texas properties were 60,602 MMcfe, of which approximately 94.6% were natural gas and natural gas liquids and 59.8% were classified as proved developed. The average remaining proved developed producing reserves per net well at December 31, 2008 was 277.0 MMcfe. Our estimated net proved reserves at December 31, 2008 had an estimated PV-10 of \$101.8 million.

Our average reserve life for this region is approximately 14 years based on our proved reserves as of December 31, 2008 and production for the nine months ended September 30, 2009 on an annualized basis. During 2008, seven gross (4.7 net) wells were drilled on our South Texas properties, 100% of which were successes. During the nine months ended September 30, 2009, one gross (0.4 net) well was drilled in South Texas (the Dubose #1), which has not been completed. In 2009, we currently expect to drill one gross well (0.3 net) on our South Texas resource play acreage. Also, as of September 30, 2009, we had identified 24 additional proved undeveloped drilling locations and over 100 other drilling locations on our South Texas leasehold acreage. Our drilling opportunities for South Texas have an average estimated well life of 15 years.

### ***Southwest Louisiana***

Our Southwest Louisiana properties consist primarily of the Fenton field area in Calcasieu Parish, acquired in the EXCO acquisition, and our legacy Grand Lake and Lacassine fields in Cameron Parish. In total, we own approximately 8,200 gross (3,600 net) acres in these large and prolific areas.

As of September 30, 2009, in Southwest Louisiana, we owned and operated 16 gross (10.0 net) producing wells. Our operated wells have an average net working interest of 51% and an

**Table of Contents**

average net revenue interest of 40%. We also owned 8,200 gross and 3,600 net acres in Southwest Louisiana.

The average net production from our Southwest Louisiana properties for the year ended December 31, 2008 was 5.9 MMcfe/d, or approximately 11% of our 2008 total net equivalent production. The average net production from our Southwest Louisiana properties for the nine months ended September 30, 2009 was 3.1 MMcfe/d, or approximately 7% of our total net equivalent production for the nine months ended September 30, 2009. The average net production per operated net well for the year ended December 31, 2008 and for the nine months ended September 30, 2009 was 0.5 MMcfe/d and 0.4 MMcfe/d, respectively.

Our estimated net proved reserves at December 31, 2008 for our Southwest Louisiana properties were 10,398 MMcfe, of which approximately 75.5% were natural gas and natural gas liquids and 57.3% were classified as proved developed. The average remaining proved developed producing reserves per net well at December 31, 2008 was 397.5 MMcfe. Our estimated net proved reserves at December 31, 2008 had an estimated PV-10 of \$27.2 million.

***Colorado and Other***

We also own properties in Colorado, Mississippi and other areas ( Other Properties ), none of which is a current area of focus for drilling. However, our Other Properties do serve to broaden our range and diversify our risk. These properties currently consist primarily of our legacy production and exploitation potential in the Denver Julesburg Basin in Colorado, which is primarily in Adams Co
