BlackRock Preferred and Corporate Income Strategies Fund, Inc. BlackRock Preferred Income Strategies Fund, Inc.

The Benefits and Risks of Leveraging

The Funds utilize leveraging through the issuance of Preferred Stock. The concept of leverage is based on the premise that the cost of assets to be obtained from leverage will be based on short-term interest or dividend rates on the Preferred Stock, which normally will be lower than the income earned by each Fund on its longer-term portfolio investments. To the extent that the total

assets of each Fund (including the assets obtained from leverage) are invested in higher-yielding portfolio investments, each Fund's Common Stock shareholders will be the beneficiaries of the incremental yield.

Leverage creates risks for holders of Common Stock including the likelihood of greater net asset value and market price volatility. In addition, there is the risk that fluctuations in the dividend rates on any Preferred Stock may reduce the Common Stock's yield and negatively impact its net asset value and market price. If the income derived from securities purchased with assets received from leverage exceeds the cost of leverage, each Fund's net income will be greater than if leverage had not been used. Conversely, if the income from the securities purchased is not sufficient to cover the cost of leverage, each Fund's net income will be less than if leverage had not been used, and therefore the amount available for distribution to Common Stock shareholders will be reduced.

SEMI-ANNUAL REPORTS

APRIL 30, 2007

A Letter to Shareholders

Dear Shareholder

In its first four months, 2007 could already be termed an eventful year for investors. For most financial markets, 2007 opened just as 2006 ended -- on a positive trajectory. Then, at the end of February and into March, global equity markets registered their first significant decline since last summer. The market jitters were triggered by a significant setback in the Chinese market and were exacerbated by worries of a weakening economy, escalating geopolitical concerns and rising delinquencies in the subprime mortgage market. Still, underlying stock market fundamentals appeared quite sound, supported by a generally favorable global economic backdrop, tame inflation, slowing but still positive earnings growth, relatively low interest rates and attractive valuations. These conditions prevailed later, and the Dow Jones Industrial Average crossed the

13,000 mark for the first time in its history in late April.

Not unlike the equity market, the bond market also experienced volatility as observers attempted to interpret mixed economic signals. A bond market rally (falling yields and rising prices) late last year reversed itself early in 2007 amid some transitory signs of economic strength. Overall, yields have fluctuated month to month but ended April little changed from the beginning of the year. However, compared to one year ago, yields on 30-year Treasury bonds fell 36 basis points (.36%) and 10-year yields fell 44 basis points, while prices correspondingly rose.

For its part, the Federal Reserve Board (the Fed) has left the target short-term interest rate on hold at 5.25% since first pausing in its interest rate-hiking campaign on August 8, 2006. The central bankers continue to express concern about potential inflationary pressures, but also acknowledge signs of economic weakness. Given this relatively "balanced" assessment, most observers believe the Fed will keep interest rates on hold for now.

Against this backdrop, most major market indexes posted positive returns for the annual and semi-annual reporting periods ended April 30, 2007:

Total Returns as of April 30, 2007	6-mont
U.S. equities (Standard & Poor's 500 Index)	+ 8.60
Small cap U.S. equities (Russell 2000 Index)	+ 6.86
International equities (MSCI Europe, Australasia, Far East Index)	+15.46
Fixed income (Lehman Brothers Aggregate Bond Index)	+ 2.64
Tax-exempt fixed income (Lehman Brothers Municipal Bond Index)	+ 1.59
High yield bonds (Lehman Brothers U.S. Corporate High Yield 2% Issuer Cap Index)	+ 6.96

If the first four months are any guide, 2007 could be a year of enhanced market volatility. As you navigate the uncertainties, we encourage you to review your investment goals with your financial professional and to make portfolio changes, as needed. For more insight, we invite you to view "What's Ahead in 2007: An Investment Perspective" and "Are You Prepared for Volatility?" at www.blackrock.com/funds. We thank you for entrusting BlackRock with your investment assets, and we look forward to continuing to serve you in the months and years ahead.

Sincerely,

/s/ Robert C. Doll, Jr.

A Discussion With Your Funds' Portfolio Managers

We continue to seek to diversify the Funds' holdings and maintain a positive outlook for preferred securities given the attractive valuations and good liquidity in the market.

How did the Funds perform during the period in light of the existing market conditions?

For the six-month period, the Common Stock of BlackRock Preferred and Corporate Income Strategies Fund, Inc. had net annualized yields of 7.29% and 7.31%, based on a period-end per share net asset value of \$22.12 and a per share market price of \$22.08, respectively, and \$.800 per share income dividends. The total investment return on the Fund's Common Stock was +3.07%, based on a change in per share net asset value from \$22.25 to \$22.12, and assuming reinvestment of all distributions.

For the same six-month period ended April 30, 2007, the Common Stock of BlackRock Preferred Income Strategies Fund, Inc. had net annualized yields of 6.19% and 6.67%, based on a period-end per share net asset value of \$22.39 and a per share market price of \$20.80, respectively, and \$.687 per share income dividends. For the same period, the total investment return on the Fund's Common Stock was +3.47%, based on a change in per share net asset value from \$22.36 to \$22.39, and assuming reinvestment of all distributions.

For the six months ended April 30, 2007, the Funds' benchmark, the Merrill Lynch Preferred Stock Fixed Rate Index, returned +3.52%, while the broader-market Merrill Lynch U.S. Corporate Master Index and the Merrill Lynch U.S. Treasury/Agency Master Index returned +2.83% and +2.26%, respectively.

For a description of the Funds' total investment returns based on a change in the per share market value of the Funds' Common Stock (as measured by the trading price of the Fund's shares on the New York Stock Exchange), and assuming reinvestment of distributions, please refer to the Financial Highlights section of this report. As closed-end funds, the Funds' shares may trade in the secondary market at a premium or discount to their net asset values. As a result, total investment returns based on changes in the market value of the Funds' Common Stock can vary significantly from total investment returns based on changes in the Funds' net asset values.

Long-term bond yields traded in a relatively narrow range over the past six months and, despite ample volatility, ended the period with little change. Overall, financial conditions remained fairly balanced, with moderate economic activity and relatively tame inflationary pressures. Recent commentary from the Federal Reserve Board (the Fed) has supported the narrow trading range. The federal funds rate remained at 5.25% at the end of the semi-annual period, where it has been since June 2006.

The 30-year U.S. Treasury bond yield stood at 4.81% on April 30, 2007, an increase of nine basis points (.09%) over the past six months. The 10-year U.S. Treasury note yield increased just two basis points during the period to 4.63%. Meanwhile, yields on one-month Treasury bills declined 38 basis points from 5.18% to 4.80%, while two-year yields fell 11 basis points to 4.60% during the period.

Late in the six-month period, fears of a slowdown in economic growth were exacerbated by turmoil in the subprime mortgage market. In addition, inflation -- although moderate by historic standards -- remained above the Fed's implicit comfort zone. In response, bond prices on the front end of the yield curve rallied on increased expectations of a Fed interest rate cut. Meanwhile, the long end of the curve sold off on inflation fears. The net result was a slight steepening of the yield curve, which has been flat to inverted for some time. Concerns about the strength of the U.S. economy were not solely driven by fears

of spillover from the subprime mortgage market. Recent non-housing-related economic data -- including payrolls, durable goods orders and retail sales -- showed signs of weakening.

The most recent Consumer Price Index (CPI) data from the U.S. Department of Labor reflected a notable surge in the overall rate of inflation, but just a marginal increase in core inflation. The CPI advanced at a seasonally adjusted rate of .6% in March 2007, following a rise of .4% in February. The significant increase resulted primarily from a 5.9% jump in energy costs for the month, spurred by a 12% rise in gasoline prices. However, the CPI for all items excluding food and energy was up just .1% for the month. The overall CPI rose at an unadjusted rate of 2.8% over the previous 12 months.

The preliminary estimate of first-quarter 2007 gross domestic product (GDP) growth came in at 1.3%, which was weaker than expected and would be the slowest pace in four years. U.S. consumer confidence declined to its lowest level in eight months in April on concerns about rising gasoline prices and a wave of mortgage defaults. Personal consumption fell .2%, partly due to the significant increase in gasoline prices during

SE

4

SEMI-ANNUAL REPORTS

APRIL 30, 2007

the month of March. Although manufacturing and industrial production data were weaker, durable goods orders bounced back dramatically in March. While housing starts unexpectedly rose for a second consecutive month in March, home sales data were disappointing. Existing home sales fell more than 8% and sales of new homes failed to bounce back as briskly as expected from their depressed levels of February.

What factors most influenced the Funds' performance?

Overweight positions in \$25 par preferred securities had a negative effect on each Fund's results, as these issues underperformed during the six-month period. The portfolios' substantial cash position also detracted from performance relative to the Funds' peers. We raised each Fund's cash allocation to approximately 5% in March 2007, in anticipation that there will be a notable increase in the supply of new preferred issues in the near future. We intend to use the cash to purchase new securities.

The Funds' results benefited from overweight positions in hybrid securities, which generally pay a fixed rate of interest similar to a bond but are influenced significantly by the price movements of the common stock of the issuing company. Another positive contributor was our use of net asset value hedges in the first half of the semi-annual period to shorten the portfolios' durations. The goal was to reduce the risk of loss in value associated with rising interest rates. Finally, we had minimal exposure to securities of companies that we believe could be affected by the troubled subprime mortgage market, and this proved advantageous.

What changes were made to the portfolios during the period?

Early in the six-month period, we added to the portfolios' positions in preferred securities, particularly issues eligible for QDI (qualified dividend income) and DRD (dividends received deduction). We also added selectively to our holdings in new issues in the high yield market. The Funds moved out of real estate investment trust preferreds as event risk remained high and valuations became less attractive. Toward the end of the six-month period, we reduced holdings that we felt could be affected by the weak subprime mortgage market.

In early 2007, we reduced our net asset value hedges and increased the Funds'

durations by approximately two years. At the end of the period, each portfolio's duration was 6.5 years, which was slightly long relative to the benchmark Merrill Lynch Preferred Stock Fixed Rate Index.

We continued to employ leveraging strategies through the period and, at April 30, 2007, both Funds had leverage positions of approximately 36% of total net assets. (For a more complete explanation of the benefits and risks of leveraging, see page 2 of this report to shareholders.)

How would you characterize the Funds' positions at the close of the period?

We continue to seek to diversify the holdings in the preferred shares with secondary issues and through the new-issue calendar, which remains strong. We also will continue to look at hybrid and DRD preferreds for market opportunity.

We maintain our positive outlook because of attractive valuations and good liquidity in the market. We anticipate some choppiness in the financials sector due to the impact of the subprime mortgage market. We intend to continue to add new names to the portfolio, particularly if attractive offerings arise in the primary market.

Notes to Financial Statements (Unaudited)

1. Significant Accounting Policies:

BlackRock Preferred and Corporate Income Strategies Fund, Inc. and BlackRock Preferred Income Strategies Fund, Inc. (the "Funds" or individually as the "Fund"), are registered under the Investment Company Act of 1940, as amended, as diversified, closed-end management investment companies. The Funds' financial statements are prepared in conformity with U.S. generally accepted accounting principles, which may require the use of management accruals and estimates. Actual results may differ from these estimates. These unaudited financial statements reflect all adjustments, which are, in the opinion of management, necessary to present a fair statement of the results for the interim period. All such adjustments are of a normal, recurring nature. The Funds' Common Stock shares are listed on the New York Stock Exchange ("NYSE") under the symbol PSW for BlackRoc
